So I was listening to a two way conversation on the Cell freqs (imaginary of course :) on my Yup mvt-7100. Anyways, I can hear both sides clearly. The lady on says "hold on", then I don't hear her again. The enjoyment dies as I am only getting 1 part of the conversation. About 15 minutes later, I hear a short burst of "zip zip zip" noise and the two way conversation is back. I know when listening to cell freq you may get one sided conversation, but why did the above happen?

Thanks,
Gary

4896. Best 900 Mhz Phone

Newsgroup: rec.radio.scanner

Does anybody know what coding scheme is used in Euromessage ?
I know that the frequencies should be in the 460Mhz band.
Is it based on POCSAG ?

Please, reply by mail as I don't have a full feed on this group.
(I will post a digest of responses).

Thanks.

However, if you dont use the center conductor and just the
shielding, that's a different story.
I have snipped off the center conductor and used the shield as
the antenna. I now have an antenna that runs from the inside of
my house, all the way out to the pole. I have no complaints on
the reception i'm getting. This concept came from the fact that I
can't have any visable outside antenna's where i live.

IF IF IF IF IF IF IF IF!!! What IF I hit someone at 55? I'll STILL get
sued. What IF I tap them at 15 MPH, causing them to spill McDonalds
coffee on their legs and they get a 3rd degree burn?

> The smart people do one of two things when faced with a choice of going
> 80 MPH: 1) don't do it and collect big bucks from the 80 MPH fool that
> hits them, if they survive the crash, or

Your so sure someone will win big bucks, how is that possible. I don't
have any money anyway (though I am insured), sure they can win a multi
billion dollar judgement-BIG DEAL. You declare bankruptcy. And what IF
it's their fault? I'm NOT saying do 80 everywhere, but, on a freeway it is safe
(assuming we're not in heavy traffic). Am I saying as soon as you hit an
interstate you should do 80?? Nooo. I'm not going to do 80 unless I feel
it's safe to do so. When it snows I don't do 55 even though it's the

limit, why? Because it isn't safe. If you don't feel safe at 80, fine, move into the right lane and pass when you need.

What IF they weren't wearing their seatbelts? Can I sue them for emotional distress because IF they would have been using it they would have survived and saved me the grief when they pull out in front of me??

> mahgvb@rohmhaas.com

It might be time for a new keypad. There is a metallic paste
on the back of each key which wears out with use. I had the
same problem with my Pro-39 but with several keys. I ordered
a new keypad from Radio Shack for $5 and my scanner was as good
as new.

The model number scanner you have IS able to be modified
in many ways including cellular. If your serial number begins with
an A or B, the unit is not able to be modified. The PRO-43 was one of
the best performing
scanners RS ever manufactured. I'd hold on to it.
Good Luck!

>
> Ken Sprouse / N3IGW
> Internet sprouse@pgh.net Compu$erve 70145,426
> Smith & Wesson - The ultimate point and click user interface.
>
>
>>>>

Yes:

All Bearcats used the 10.8 i.f. crystals figured as follows:

low band = Receive Freq + 10.8 = actual crystal frequency
high band = Receive Freq - 10.8 divided by 3 = actual crystal frequency
uhf band = Receive Freq - 10.8 divided by 9 = actual crystal frequency

Also, you can use Regency crystals in Bearcat scanners and vice versa if the actual crystal frequency is
the same. Remember that Regency, Realistic, Sonar,etc. use 10.7 i.f.

Example : 46.120 Bearcat crystal will read 56.920 on a frequency counter. (46.120+10.8) therefore this same crystal plugged into a Regency scanner will yield 46.220 receive frequency
(56.920-10.7)

Use the formulas listed above, replacing 10.8 with 10.7 to figure actual Regency frequencies.

You may also want to experiment with using reverse formulas to figure if crystals you have will work in
other band ranges.
Example: You have a receive crystal marked 42.180 for a Regency scanner. The actual crystal frequency is 52.880 mhz. Plug the actual frequency into the high band Regency formula above. This
would be 52.880 x 3 = 158.640 plus the i.f. (10.7) = 169.340. This means if you plug this crystal into
a Regency scanner in the high band position, you will receive 169.340 mhz. Same formula holds true
for uhf band.

Experiment a little. You may find all those useless scanner frequencies that you have may be useful in
another scanner or another frequency range.

Good Luck !

Since I've seen a lot of interest in 900Mhz phones expressed
here lately, I thought I'd post this:

The AT&T phone stores are closing nationwide in another month
and currently have all their stuff on closeout sale pricing.
The top of the line model 9300 900 Mhz, digital, spread
spectrum cordless phone (actually made by Escort and same as
their topline model in a different package) is $50 of at
$229. I got one several days ago and love it. With the base
unit wall mounted on the bottom story kitchen wall (center of
house) I can walk up and down the street 500 to 600 feet or
back into the woods in back without dropping out. Oh, and to
make it germaine to these groups - of course nobody can scan
me 8^). It was mentioned here by someone that the audio quality
of the AT&T 900 Mhz phones wasn't good but I find that not to
be the case. Maybe they tried another model. My wife (who
bitched about how crappy our SWBT 'freedom phone' sounded for
10 years) likes it also so I figure I won't get in too much
trouble when the VISA bill comes. Just my thoughts, YMMV.

I often wonder how many people are tempted to take "five finger discounts" at RS. Not so much as to avoid having to pay for the item but to avoid all the long drawn-out rigamarole like the above. And waiting an extra 10 minutes so everyone in front of you can give name, address, last 4 digits of phone number, etc. I'll bet a there are a few who just decide to shove batteries in pocket and walk to avoid the needless hassle. Even though they have the money to pay for them. No, I am not advocating this. But I'll bet that if stores like RS started with policies of quickly and efficiently taking your money they'd have a lot less shrinkage.

>impossible to monitor local areas there is so much traffic.

Ed,

I work on a Motorola Trunked Radio System for the City of Toledo, Ohio
and we have set up regular trunked radios as scanners.

Limited scan is even available on the older STX portables for 5/6
talkgroups per personality.

My STX is currently set up for 6 different personalities (police,
fire, utilities, management, service, and police/fire mixed), so I can
go where the action is!

On a Motorola system, lots of information not readily available to
the public, is required to do this.

And then there is the System Key...

It is also possible to do the same on the higher tier Maxtracs
(C5/C6's)..

This does make for a pricey scaner even IF you could get someone to
program it for you, and they can remotely kill it at any time with
just a few keystrokes :-(

If you could somehow get a regular scanner to do what you want, you
would then be pounced upon by Motorola's Corporate Legal Staff who
would surely accuse you of violating their "Intellectual Property"...

Does this help any?

Dave

Hey Brian,
How about using "Webcrawler or Yahoo, " or some other search engine or tool?
Simply type in FIRE and see what comes up.
Not only will you see the Kick ass LAFD page you will also see other great pages such as Charoltte (sp) NC and FEMA.
Keep up the good work.
Be glad you are not in Philly. Today the roads are sheets of ice and fire engines are getting into accidents all over the place.
Alex.

Radio Shack PRO-43 Modifications FAQ
< Last modified March 8, 1996>

CONTENTS

1. Introduction
2. Which units can be modified for extended frequency
reception?
3. Companies that will modify the PRO-43 for extended
frequency reception
4. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)

---

1. Introduction

As long as there is a continuing demand for it, this mini-FAQ
about PRO-43 modifications will be posted every month or so.
In large part, it is the file PRO43.MOD from
pub/hamradio/mods/tandy at oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
would be increased four-fold.

---

2. Which units can be modified for extended frequency
(800 MHZ) reception?

Note: In the United States, it is against the law (Electronics Communications Privacy Act of 1987, public law 99-508, amended 1994 by public law 103-414) to listen to cellular or cordless telephone communications. However, it is not illegal to own equipment that can receive or can be modified to receive such communications, even though it became illegal as of April 1994 to manufacture or import equipment that could be easily modified by the user to receive cellular communications. Equipment manufactured before the cutoff date can continue to be sold until stocks are exhausted. While businesses are forbidden from importing cellular capable scanners for resale, the question has been raised whether an individual can legally import such equipment not intended for resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial number and FCC-ID may not be perfect, that is, there may be some units judged modifiable by the serial number and nonmodifiable by the FCC-ID, and vice-versa. Anyone with a such a unit should send a message to gdallal@world.std.com so that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). There have been *no* reports of a modifiable US 3A4 unit. However, there have been reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand, quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

3. Companies that will modify the PRO-43 for extended

frequency reception

If you'd rather not do the modification for extended
frequency reception yourself, Cellular Security Group, 106
Western Avenue, Essex, MA 01929 (508/768-7486) will do it for
$40, which includes insured UPS return postage. However, CSG
will not move the diode to extend the low band to 88 MHz; they
only remove the diode to unlock the 800 MHz frequencies. When
CSG is mentioned on the net, two types of comments follow:
testimonials from satisfied customers and comments from those
with the technical skills claiming that the service seems high
priced for just removing the diode. But, there have been *no*
reports of shoddy work or damaged radios. (They've modified
two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will
perform the mod for $40 plus shipping. They will move (rather
than just remove) the diode in units that can benefit from it,
but state that there is no way to tell whether the diode
should be moved without looking inside. They claim that the
determination can not be made from the serial number, FCC-ID,
or date of manufacture. For further details, call Grove at
704/837-7081. In order to get a unit modified, a service
order number must be obtained from the same telephone number.
Packages without a SO# will be refused.
---
4. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out
you should not remove but MOVE the diode. Doing so allows cellular coverage as
well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The following procedure requires familiarity with microcircuit soldering and
will violate your warranty. Grove Enterprises assumes no liability resulting
from its attempt, nor will accept the modified scanner for return under any
condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a
desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips
screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

A. Ray Miller
arm@super.org | armille@afterlife.ncsc.mil

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of
microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and
other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by
four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit),
remove the two screws from the lower circuit board. Looking down at
the unit, you will see that the screw on right side of the lower
circuit board can be easily removed. Remove the screw on the left side
by by sliding the screwdriver between the top circuit board and the
metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel
(antenna, volume, and squelch knobs) along with the top two circuit
boards as one unit. The two circuit boards will be connected to the
final circuit board (the one attached to the front section of the
scanner) by several wires. Simply set the top panel/circuit boards
alongside the front section of the scanner and you can leave these
wires connected.

Step 5

The microporcessor is located under the large metal shield on the final
board (the front section of the scanner with the display and keypad).
If you look under metal shield from the side closest to the bottom of
the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to
remove it completely (unless you want to use it to restore additional
frequencies as explained in other MODs), you can just lift one side so
it dosen't make connection and then put a small piece of tape or heat
shrink over it, so it won't. Make sure it's not lifted to high or the

boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

(This modification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu >

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend

antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

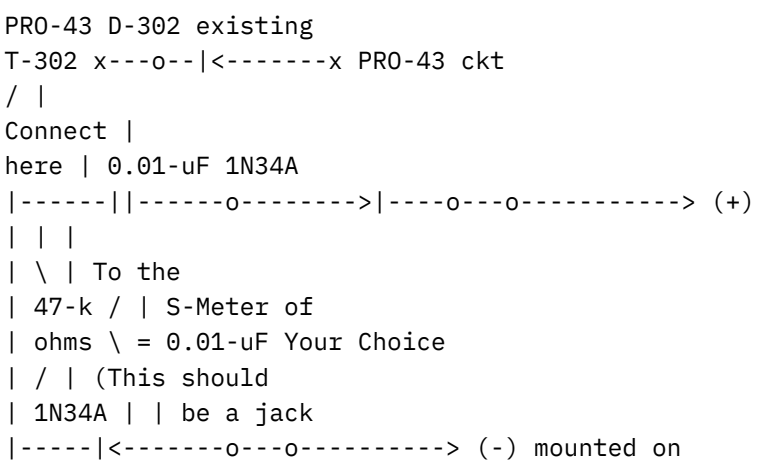
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|

2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode

3. o means a connection, preferably soldered

4. The 47-k resistor is self-explanatory, I hope.

5. -------- and | are wires/conductors.
|
|

6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:

```
5-k Trim Pot
(+) --------/\/\/\/\---o--------|
| | |
This should |-------| |
be a plug of +
some sort to The S-Meter
connect to the Terminals
mating jack on -
the scanner |
|
(-)----------------------------|
```

You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe

in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

From: IN%"millingtoj@oldhamlrd-po.oldham.gpsemi.COM"
"John Millington" 17-DEC-1995 04:55:31.71
Subj: RE: pro-43

The European Pro-43 comes with a diode in D1, D3, +D5.
Remove the diode from D5 and solder it in position D2.
The scanner will now cover 30-68Mhz.
Usual disclaimer.

Hi Bob. This might seem out of place in regards to your request here (which I wish I could answer for you) but you seem to be knowledgeable in the area so anyway, here goes. Do you know any way to modify the the high end of a scanner. I am new to the scanner hobby and recently got a great deal on a scanner (last years model) with a 512 Mhz (UHF Hi) highend. I am really pleased with it but am concerned by what I hear in this newsgroup. It seems that there is a trent developing toward higher and higher broadcast freqs. It seems that we need at least a gig in the high end to stay prepared for changes out there. How do you feel about this?

My scanner is a NETSET PRO-2028

Any comments would be appreciated. Thanks.

4933. C. Crane Co. BC9000XLT 800 MHz Mod

Newsgroup: rec.radio.scanner
Date: 1996-03-08 00:00:00 UTC
From: lui@netcom.com
Message-ID: <lui-0703961137310001@192.0.2.1>
Source record: 238702

The C. Crane Company is advertizing a video and parts kit to perform a mod to the BC9000XLT to restore full 800 MHz coverage. Does anyone have any experience with this?

I already have a BC3000XLT and am very happy with it. The BC3000XLT receives images of the blocked 800 MHz band from 1005 MHz and 1030 MHz. Does the BC9000XLT have a similar "feature"?

Tucson has some activity in the non-cellular 800Mhz range (859.1 & 862.1, for instance), and police call registers it as trunked activity. The strange thing is that I _always_ seem to catch the last second of the call, and it's followed by four beeps. Are there any new trunking system which, instead of assigning a channel for an entire conversation, hops between several channels to make them more difficult to scan?

Does anyone know what the new Drive Thru frequency for Roy Rogers is in
the Washington DC area?

The old frequency was Customer --> 457.5375 Clerk --> 467.7625

I've tried all Business, Special Industrial and Wireless Mic frequencies
between the following ranges:

30.5800 - 49.5800 Mhz
151.4900 - 171.9050 Mhz
451.7125 - 464.9875 Mhz
489-4357 - 496.4375 Mhz

I think they be on 800 Mhz, but have not had any luck in finding them.

I just performed the PRO43 cellular restore mod; Its legal to listen to cellular here...at least for now :)
It works very well. I didnt even have to remove the circuit boards. If you remove the back cover and battery pack, you can see the diodes to be removed inbetween the upper and lower boards.
If you use a small and VERY sharp xacto type knife, you can cut out the diode, avoiding the complicated dissassembly of the radio. You just have to be VERY carefull as there is not alot of room to move in there. After the mod, I noticed the radio still scans in 12.5khz steps in the trunking range but in 30khz steps in the cellphone band which is perfect. BTW, the date code on my radio was 12A2.

Hmmm Good Point...

Perhaps it would be covered by some inter-state fraud provision or some
such that would make it a federal crime (whatever that means these days).

I've heard a lot of talk about AR8000's knobs becoming loose. Here is what I did when this happen to me.

I simply took a hot glue gun and put a little dab into each knob and pushed it on so it was straight. Then waited 5 minutes.

The knobs are working perfectly without any previous problems. Anyone else use this idea?

Mine's a first generation 2026, and it is an RF sponge! It's mounted in
a van, with a magnetic antenna (an AM/FM antenna with a mag mount
typical 30" whip), that one lets the pagers wipe out UHF. I switch to a
18" homemade antenna that is mounted INSIDE the van, near the big glass
window on the side door when the pagers interfere.

>bgpalmq@primenet.com

Overload and intermod can be a problem on the Pro-2026, as it is only a dual-conversion receiver.

I live outside a metropolitan area (15 miles away from Portland, Oregon) and generally have pretty good luck with the Pro 2026, both mobile in the care and at home on an INTERNAL antenna.

My home sits at the bottom of a hill that has an 800Mhz Public Service tower on the top of it, and 450 and 800 Mhz interference is common, but for what I use it for, I can easily live with it for the price.

I have a Pro-2006 I can use that doesn't have these problems, but I never take that mobile. The Pro-2026 is just handier due to its size and ease of use (fewer buttons to worry about).

Steve

>Mail didn't even touch the package?

Yes. On Sept. 13, 1994 the Mail Fraud Statute was amended to include
"private or commercial interstate carriers". Federal Express and
others lobbied heavily for the bill, as they did not want to be a
haven for fraudulent actors seeking to avoid mail fraud prosecution.
The full text of the relevant section is set forth below:

Dwayne

Your friendly neighborhood air cargo lawyer
and ham (KC4POI).

Whoever, having devised or intending to devise any scheme or
artifice to defraud, or for obtaining money or property by means of
false or fraudulent pretenses, representations, or promises, or to
sell, dispose of, loan, exchange,alter, give away, distribute, supply,
or furnish or procure for unlawful use any counterfeit or spurious
coin, obligation, security, or other article, or anything represented
to be or intimated or held out to be such counterfeit or spurious
article, for the purpose of executing such scheme or artifice or
attempting so to do, places in any post office or authorized
depository for mailmatter, any matter or thing whatever to be sent or
delivered by the Postal Service, or deposits or causes to be deposited
any matter or thing whatever to be sent or delivered by any private or
commercial interstate carrier, or takes or receives therefrom, any
such matter or thing, or knowingly causes to be delivered by mail or
such carrier according to the direction thereon, or at the place at
which it is directed to be delivered by the person to whom it is
addressed, any such matter or thing, shall be fined under this title
or imprisoned not more than five years, or both. If the violation
affects a financial institution, such person shall be fined not more

than $ 1,000,000 or imprisoned not more than 30 years, or both.

The problem with the frequency converters (800 to 400MHz) is that most
scanners default to 12.5 kHz steps at 400 MHz, while the cell phone band
is allocated in 30 kHz steps. You won't listening to the EXACT frequency.

From what I've found out, most pager providers bulk-purchase the pagers from
the manufacture supplied with the applicable freq. board. This receiver board can
be swapped. I recently paid around $25 for a replacement receiver board.

The >latest< Advisor programming software does have a field for Frequency, so I
called Moto in Florida and spoke with a receiver guy.

What I gather is that Bravo and Advisor receiver boards are interchangeable.
Synthesized boards can be used in the Advisor, but must be programmed with the latest version of their software. Moto does sell 2 synthesized receiver
boards, one for the 15x range and one for 93x range. Ready, the price is around $120...ouch! While this is a little pricey, it does offer much more
flexibility.

The Advisor is capable of handling 4 capcodes, but I heard that there are mathematical limitations/restrictions....

In the discussions about UHF overload from Pagers I have the following ??:

.What is the transmit power (EIRP) from the big boys such as MobilComm?
.What is the modulation type?
.How long is a typical transmission time for a simple digital (non-alpha)?

And thanks
Sam of Central Florida

>Does the BC9000XLT have a similar "feature"?

I don't know about C. Crane, but some time ago, I modified one
of my BC9000XLTs for expanded 800 MHz coverage. I applied part of
Steve Donnell's BC8500XLT modification to my BC9000XLT. The
adaptation is cheap, and requires only one part -- a switch.

I posted something about this, using the term "image swap",
a few months ago but nobody responded.

I drilled a 1/4" hole on the rear panel and mounted a DPDT toggle
switch (available from Radio Shack). The switch reverses the logic
level signaling leads which control the front end band filters,
switching *in* the 800 MHz filter and switching *out* the
filter for the upper end of the military air band.

Then you get *full* 800 MHz sensitivity when tuning the 360 - 380 MHz
range image. I made 12 dB SINAD sensitivity measurements to confirm.
Bottom line -- the 800 MHz image and mil air signals are
swapped -- the mil air signals become the images. :-)

This doesn't affect the display circuitry which still reads
the mil air frequency.

Buy a BC9000XLT service manual first. The surgery is delicate
due to cutting small traces on the printed circuit board and
routing the wires from the switch to their proper destinations.

> "104" on the top of it. No color coding on this resistor, though.

Actually, it says "103" on the top of it, and it is black and the numbers
are white. My concern is that the mod was for the unit that had the CPU
chip that was: "UNIDEN UC-1147", and mine says "UNIDEN UC-1147A", plus
as noted on the rear of the unit it was "refurbished" on 6/94. I would
like to cut the "103" resistor to restore the cell band, but I am
concerned about ruining my unit. That would be disappointing. Has
anyone had success by cutting the black "103" resistor on a unit that's
cpu was a "UC-1147A" ???

Never mind, I had lunch there this afternoon, and managed to find them.

The new frequency is Customer --> 469.9250 Clerk --> 464.9250

It's a very low power transmitter and cound not be heard beyond the
parking lot.

4983. AOR8000 Linux App to record & index audio

Newsgroup: rec.radio.scanner
Date: 1996-03-09 00:00:00 UTC
From: dwyer@ibm12.scri.fsu.edu
Message-ID: <4ht0ii$j9h@news.fsu.edu>
Source record: 238736

Guess you could call this an announcement...

a8audio is a script written in expect (a tcl-based language) that is
designed to capture audio data and save it to your hard disk for later
review. Data is indexed by frequency.

Requires:

-Linux based PC (or any UN*X box that provides the items below)
-Serial port
-AOR CU8232 Serial Interface
-Sound device with /dev access (like "/dev/audio")

-expect 5.0 or greater
-cu (part of the linux distribution, but is on other UNIces as well)
-lots of disk space to record audio

You can find it at http://www.scri.fsu.edu/~dwyer/a8audio.text
My home page (http://www.scri.fsu.edu/~dwyer) contains a link to the script,
as well as links to expect and cu.

Notes:

1. This script is very rudimentary, and isn't very pretty -- but it works.
I've commented the crucial parts to try and make it understandable.
2. If you take a few moments to examine the script, you'll see how you
could use it as a prototype to design a program to do just about
anything to the AOR.
3. As the script is enhanced, I'll replace the version available for
download.

Enjoy...

If you live in a metropolitan area (like I do), triple conversion cuts down on a lot of the interference received from paging frequencies and other strong signals. Around here the interference can be bad enough to cover strong local signals, like the police. On the other hand, with all new scanners being unmodifiable it can be advantageous to use a double-conversion receiver so you can hear the cellular images from 896-915.6 MHz. Triple-conversion scanners eliminate these images.

Scanner antennas, and MOST others are VERTICALLY polarized therefore they should be in that position to operate efficiently.

Yes, horizontal will work, though not as well. I used to have this old (well, not at the time!) Midland 4-channel VHF-Hi/Lo Crystal Scanner and a Bearcat Four-Six crystal scanner. I used to operate both of them in my car, clipped to the visor, and they worked just fine. But radios DO work better when the antennas are vertical.

The 47.500 MHz secondary frequency is rather ubiquitous in Southern California, but there are several other secondary VHF-Low frequencies. It depends on your area. Those secondary VHF-low frequencies are all shared with other services. I don't think 47.500 MHz was used but momentarily during the Northridge Earthquake incident. We used various UHF, amateur, cellular, Nextel ESMR, and lots of newly installed land lines.

Yeah...now any idiot with $200 can walk to the corner, get an HT with no questions asked, and bootleg on 2-meters. Wonder if that's a good part of the reason why we have so many problems with fake calls, repeater jammers, and unidentified stations repeatedly dialing "9-1-1" on our autopatch lately?

Does anyone have any of the secrete key codes for the BearCat 220XLT?

Thanks for your time.

Then Radio Shack should NOT be saying "You have questions, We have answers."

BTW: Radio Shack is not the first to use the above bullsh** motto. Back around ten years ago, a bay area television station station used the exact same line for their newscast. (They too, did not have all the answers... nor were they correct.)

Another TV station had the "THEY have xxx, WE have xxx" (xxx=choppers, reporters, whatever) and then "We have xxx, They don't." (Got in front of me right now, a KRON postcard "They got postcards, We got Postcards.) Meanwhile, KGO radio, the talk radio station in the Bay Area, started their own counter-campaign "You've got questions, so do we"... probably more truthfull that the original.

Radio Shack: You've got questions, We can BS.

This is only true on some of the newer cell phones, and only to discourage
scanner buffs from listening in. All other phones (landline, cordless)
have the their own transmission repeated back to them.

>breeze@gulf.net | Poor planning on your part
> | does not constitute a crisis
> | on my part...

The reason for using a multicoupler when connecting more
than one receiver to a single antenna is not so much
impedance matching as it is isolation. Receivers in general and
scanners in particular are noted for sending some of their
internally generated signals (from local oscillators, etc.) back
out the antenna connector. If another receiver was
simply connected in parallel, using a "Tee" connector, it would
receive all these false "signals". This is especially noticable
on a scanner, where search mode will find 'em all!

A multicoupler allows the incoming signals from the antenna to
pass with relativly little opposition (typically 3dB insertion
loss) while providing much higher opposition to signals passing
the other way, out of the receiver antenna connector to the other
receiver, or even back to the antenna where they could be

re-radiated. This reverse opposition is called "isolation" and should be 20bB or more, if interference between receivers is to be avoided.

Check out the "Mobile Antenna Multicoupler" from Grove Enterprises (www.grove.net). Model CPL-63M is $14.95 and has Motorola connectors, Model CPL-63B at $16.95 has a BNC connector on the scanner output. Just installed the latter in a Ford Aerostar and it works fine. Not as good as a rooftop antenna perhaps, but certainly better than a "Rubber Duck" inside the vehicle. Invisible too. (No, I don't work for Grove!)

Hope this helps.

I bought a factory reconditioned Bel 900 mhz. It was erratic, so I sent it
back. It was replaced and the new one works great. I have 2 acres of prop-
erty and have no problem anywhere. I certainly have no hesitation of buying
a "factory reconditioned" one to save quite a few bucks. Don't know about US
prices but reconditioned was about 150 Canadian "Duck Bucks".--

Personally, I wouldn't trust this mod. If it were that easy, it would have come out long ago. Why hasn't Bill Cheek or some other tech thought of it?? Nah, it's not that easy. Jumping the chip could damage it or take away some other functions/features. And, at $4.00 a pop; I'm sure you'll be signing some kind of "disclaimer".

Of the several units I have used, the - believe it or not - Radio Shack 900MHz cordless is the best, both on range and clarity. It is a spread-spectrum digital unit which is made, I believe, by Cobra. It retails in the high $200s but they regularly put it on sale for $229.

Since it is Radio Shack, you can try it and return it if you don't like it.

Uh...Drew...what about the booming newsgroup "rec.radio.swap"? I can get literally ANYTHING I want from there. You think those old HAMS are gonna deny a sale to me if I ain't got a call sign? Nope. rec.radio.swap is just as fertile ground for pirate/bootleggers as Rat Shack is, if not _more_. Don't cap on Rat Shack, dude, they are pretty cool.

This WWW site is an EXCELLENT resource for ATC frequencies- you can
inquire on any airport facility in the United States; the data listed
is from the FAA's database and was just updated at the end of
February.

Medical Terms for Scanner Monitors

Note: The following list of medical terms s a compilation from several online posts, plus my own personal research, any corrections, or additions to the list is always apperciated. This list and other info can be found on my homepage at http://chat.carleton.ca/~dbowlby. Note, this page contains a number of terms that may be specific to the Ontario Canada ambulance service.

***Note i have NO medical training, and this list isn't intended to represent any kind of medical reference.

ACR: Ambulance Call Report, a M.O.H Documnet filled out by the ambulance crew to document the chronology of the call.
Abrasion: An external injury where a rough surface injures the skin in a manner like sandpaper would.
Airway: A tube placed into the patient's throat that keeps the breathing passage open and/or prevents oxygen or rescue breathing air from inflating the stomach. Air/oxygen goes only into the lungs and the esophagus is blocked. This is usually used on unconscious patients because conscious ones vomit when you put something in their throat.
Ambulatory: Patient able to walk.
Amputation: Removal of a patient's extremity.
Anaphylactic Shock: Shock caused by Alergic reaction.
Apnea: The absence of breathing.
Asphyxiation: Suffication.
Avulsion: a tissue partly or completely torn off by a mechanical injury such as an avulsed ear lobe.

Bradycardia: heart rate is slower than normal.

C-Spine: "cervical spine"- the top seven vertebrae in the neck area. Injuries in this area are life-threatening because they could sever the spinal cord. A general goal is to keep the neck in a fixed position if injuries are suspected. In response to the command, "don't move your neck" the patient invariably nods.
CA: Short for Cancer.
Cardiac Arrest: The sudden stopping of an effective cardiac functioning of the heart
Catheter: Tube inserted into the body to inject or withdraw fluid.

CHF: Congested Heart Failure.
Chief Complaint: primary problem that resulted in the patient requesting treatment.
Compound Fracture: When a broken bone protrudes through the patients skin.
Contusion: A bruise.
Contraction: Shortening of muscles.
Concussion: Injury to the brain caused buy a blow.
Convulsion: Seizures.
COPD: Chronic Obstructive Pulminary Desease.
Cutaneous: Relating to the skin.
CPR: Cardio-Pulmonary Resuscitation. The patient is no longer alive and chest compressions as well as rescue breathing are being used in an attempt to revive the patient.
Cyanotic: means the patient's skin is unusually blue; caused by lack of oxygen.
CVA: Cerebral Vascular Accident, Stroke when blood supply to the brain is impaired.

D5W: a solution of sugar water in sterile water, used to re hydrate patients.
Defibrillator:microprocessor-controlled defibrillator that senses the patient's heart rhythm. In some situations, the heart beats in a non-productive way so that insignificant or no blood flow is generated. This is called "fibrillation." The defibrillator shocks the heart muscle, stopping it momentarily, so that a normal heartbeat will resume.
Diastolic Heart Pressure: lower pressure noted during ventricular relaxation as the heart fills with blood.
Drug Box: (The BOX) locked box containing the drugs used by paramedics under doctors orders.
Direct Pressure: when an artery is bleeding EMS providers press against the wound or an "upstream" artery to reduce blood loss.
Dyspnea: Troubled or difficult breathing.

Endema: Fluid that escapes into the tissue and causing swelling.
Epistaxis: Nose Blead.

Full Arrest: The patient's heart is not beating.

GI:Gastrointestinal
Gurney: The wheeled stretcher used to move the patient.

HBD: (Has Been Drinking) Intoxicated or under the influence of alcohol.
Hypervolemic Shock: Shock induced by reduction in blood volume, often from hemorraging

---

I.V.: An intra-veinous solution; common types are "D5W" (5% dextrose i water), lactated ringers (usually used to build volume because of a patient's blood loss), saline solution (for infusion of medications); see T.K.O.

Jaundice: Means the patient's skin and/or eyes are unusually yellow.

Ked Sled: a scoop stretcher that splits into two halves. It is slipped under a patient and snapped together in order to "scoop" them up. Also called a scoop stretcher.

Laceration:. Tearing or cutting of skin.
L.O.C.: loss-of-consciousness or (more frequently) level-of-consciousness.
Lumbar: relating to the lower back.

MAST trousers: Military Anti-Shock Trousers are inflatable trousers that force blood from the legs into the upper body. This is used to get blood to the vital organs in cases where the patient has lost significant amounts of blood.
MI: Miocardial Infraction: Damage or death of an area of the hearts muscle resulting in a reduction of blood flow.
M.O.H: Ontario's Ministry of Health, the government body responsible of Ontario's Ambulance Service.

Nasal Cannula: Apperatus for supplying supplemental oxygen through small prong inserted in the patients nose.
Non-ambulatory: patient cannot walk.

Occluded: Obstructed.
OD:OverDose.
Oriented times _____ (1,2,3,or 4): patient is aware of (1) what they were/are doing, (2) what time and day it is, (3) their own identity, and (4) their location. Oriented times four means the patient knows all four. The number is the sum of correct answers. For example, a patient knows, "My name is Joe Smith and I remember that I was riding my bicycle." The patient does not know where they are or what time of

day it is and is therefore oriented times two.
Oxygen via Cannula: oxygen is administered through a two-prong nasal cannula in situations where low flows are required and the patient breathes on their own.
Oxygen via Mask:oxygen is administered through a mask in situations where high flows are required but the patient breathes on their own.
Oxygen via Positive Pressure: the patient has oxygen administered under pressure through a mask or airway in situations where the patient is in respiratory distress or not breathing on their own.

P.E.R.L.: pupils are equal in size and react to light.
Posturing: response to pain where the patient's arms, legs, hands, and/or feet move inappropriately in response to certain stimulus. Is an indicator of certain types of injuries.

Ringers Lactate: Sterile solution used as a electrolyte replenishment.
Respiratory distress: difficulty breathing.
Responsive to painful stimulus: a patient with a lower-than-normal level of consciousness can be evaluated in part by checking to see if there is a response to pain. A common way to do this is to rub the patient's sternum with the sharp point of the EMS-provider's knuckles. This should cause a grimace, moan, or some similar response.
Saline Solution: A solution of salts.
S.O.B.: shortness of breath.
Semiconscious: Partly Concious Seizure: or seizure activity usually refers to uncontrolled muscle activity associated with a diminished level-of-consciousness. Two common causes of seizures are epilepsy and (in young children) febrile seizures are caused by a high-grade fever.
Splint: a rigid material used to immobilize broken bones in order to prevent further tissue damage or injury.
Stokes: a basket-like stretcher used in rescue situations where the non-ambulatory patient must be transported over rough terrain or up/down a cliff.
Suction: a device used to remove foreign matter such as vomit or blood from the patient's mouth in order to prevent it from blocking breathing.
Systolic Blood Pressure: The higher blood pressure noted during ventricular contraction

---

T1: M.O.H term for the time the call was received.
T2: M.O.H term for the time the Ambulance Crew was notififed.
T3: M.O.H term for the time the Ambulance crew was Mobile.
T4: M.O.H term for the time Crew arrived on scene.
Tachycardia: (pronounced tack-ee-car-dee-ya) heart rate is faster than normal.
Thoracic/Thorax: relating to the middle back.

TIA: Transient Ischemic Attack.
T.K.O.: means "to keep open"; a routine, precautionary I.V. started in case physicians decide a drug must be administered immediately.
Traction Splint: a splint that pulls on the end of a broken leg. This is most often used for a broken leg above the knee and results in greatly-reduced pain for the patient.
Traumatic full arrest: a full arrest as the result of an impact, fall, or mechanical injury.

Ventricular Fibrillation: disorganized twitching of the heart muscle which results of the heart to pump blood.
Vital Signs: Pulse,Blood Pressure, respiratory rate, temperature and L.O.C.

Witnessed arrest: someone saw the patient "go down" and there is some idea of how long the patient was not breathing.

Any additions or corrections are appreciated.

5022. Ontario, Canada Ambulance 10 codes

Newsgroup: rec.radio.scanner
Date: 1996-03-11 00:00:00 UTC
From: dbowlby@chat.carleton.ca
Message-ID: <4i1m2e$6ek@bertrand.ccs.carleton.ca>

Cross-posted to: rec.radio.scanner,alt.radio.scanner

The following is a list of official MOH 10 codes for ambulances

Ontario Ministry of Health Ambulance 10 Codes

10-3 All Vehicles stop Transmitting
10-4 Acknowledge
10-6 Busy-Stand by unless Urgent
10-7 Arrived(or OUT of Service)
10-8 Departed (or IN service)
10-9 Repeat last Transmission 10-13 Unable to say on air (Relative near by etc)
10-19 Return to Base
10-20 Whats your Loaction
10-21 Phone by Landline or Cellular
10-25 Non-Violent Psychiatric Patient
10-26 Call is cancelled
10-27 Hostage Taking
10-34 Whats the Hospital status
10-36 Emergency is CLOSED (Critical care Bypass)
10-37 Emergency is OPEN to Code 3's only (ReDirect Considerations)
10-38 Emrgency is CLEAR
10-50 Violent Psychiatric Patient
10-100 Bomb Threat
10-200 Have Police Attent (often abreviated to 10-2's)
10-2000 SEND HELP IMMEDIATELY

Taken from my web page at http://chat.carleton.ca/~dbowlby

5023. AR2700 webpage

Newsgroup: rec.radio.scanner

I've been trying with little success to get info on AOR's AR-2700.
Either no one but me owns one, or this information is very hidden.

Is there any interest in an AR-2700 web page? I'm considering putting
one up. I've been doing mods on my 2700, like adding a jack for computer control
that doesn't require using that silly FFC connector in the battery compartment,
and also figuring out the memory map.

Any other info would be welcome, assuming anyone cares.

Brian,

You have the right to disagree. I also acknowledge the fact that I did not provide the course information in its entirety. What I have done is summarized a few facts extracted from the material. As you have pointed out this can be a dangerous practice which can lead to all kinds of different interpretations.

If you would like to look into this further yourself you may refrence ANSI C95.1-1982. BTW its cheaper to obtain this document from IEEE. FYI its in the process of being rewriten for 1996 or 97.

Additionally you may reference IEEE entity position statement dated Aug 13, 1990 titled: Human Exposure To Microwaves And Other Radio-Frequency Electromagnetic Fields
Their address is 1828 L Street, NW Suite 1202 Washington, DC 20036-5104
Phone (202) 785-0017

This document does not provide much information though.
Once again I will provide the summary for the document. This should in no way be taken out of context.

"In Summary, the position of the IEEE-USA is that there is no cause for alarm regarding the environmental levels of RFEM fields to which the general population is exposed. In addition, based on present knowledge, prolonged exposure at or below the permissible levels recommended by the American National Standards Institute is not likely to be hazardous to human health. Research on the biological effects of RFEM fields is, however, neeeded to ensure that these guidelines or any revisions thereof will continue to be soundly based on scientific data. Unless properly supervised and controlled in a medical setting, prolonged exposure to high-intensity RFEM fields may be harmful. With ever-increasing uses of RFEM fields for their obvious benefits, there is an unquestioned need for continued surveillance to ensure that neither environmental nor occupational levels of exposure exceed prevalent safety standards."

As you can see they still haven't made a commitment either way. They leave themselves on the fence. Maybe the new rewrite will be more definative.

.

Thanks for answering...

The Albrecht-scanner has a frequency coverage of 100 kHz to 2060 MHz
LSB/USB/CW/AM/N-FM/W-FM and has a capacity of 1000 channels.

Does this compare to one of the scanners you mentioned above ?

Many regards
Michael

I own the Albrecht AE300 and its a very nice unit. The Range is from 0,1 to 2060 Mhz. My version has no invert-gimmik so I (could hehe) only listen to cordless, but not to cellular (in germany C-Netz) calls. The scanner is made in Japan and I believe its just a copy of another Japanbased company. I hope this info can help you.
Robert

Dielectric Material for all the above cables is Polyethylene

I have typed in the information above as it appeared in the tables I have.
I can not verify if the numbers given to me are correct nor do I have the
time to do so. I have verified that I have not transposed any of the
numbers.

The best Cable in my opinion for standard cost is the double shielded
RG223 for the smaller diameter or RG214 for the Larger diameter cable.
And their belden equivalents.

However, if I had my choice and money was no object then I'd probably be
using some
very low loss heliax cable

Then again we use waveguide WR2100 and 6 1/8" for TX/RX at work Very low
loss.
Work www site http://hyperion.haystack.edu

I hope the information is usefull and people will keep it on file for future
reference.

Chris

I have a Uniden EXP9200 that works great, extra battery on charger all the time and great range. Daymark had some of these in the single line model for less than $200.00. By the way, it is not scannable.

Also try "On Sale" homepage sometimes they have reconditioned units cheap.

5036. AR-8000 vs Scan*Star+ for Windows help!!!!!!!!!!!!

Newsgroup: rec.radio.scanner
Date: 1996-03-11 00:00:00 UTC
From: Geir L
Message-ID: <314371B1.27C8@telepost.no>
Source record: 238597

Hi & thanks for reading this.

I have an AR-8000 & just buyed the Scan*Star+ for windows software (ver. 5.78). The on-line help does not describe any good the timing parameters in the configuration program (i.e. only a few timing parameters is described at all). However I am my self a computer programmer (commercial communication software) & have tried to use common sense gained in my work - without any luck to get the program to scan (work) properly. What is happening is that my scanner (via Scan*Star) sometimes does not stop on busy channels as it should do. I have now used two days (!) & tried almost every combination without good results. I do have the AOR CU-8232 interface & is a win95 user. Any suggestions?

The other problem is that the scanner only scans with about 5 ch per. sec. when it is contolled by Scan*Star. It seems that the Scan*Star people do not use the built in feature in the AR-8000, that the scanner can (under software control) be commanded to start the scan (i.e. the receiver scans by it self) & each time it stops on a busy freq the AR-8000 returns the frequency etc to the controlling program. The reason for this feature in the AR-8000 is obvious to gain speed via software control. The Scan*Star people sadly does not use this AR-8000 feature. And I believe at least partly, that is to blame for the slow speed.

Q: Do you know of any other software that *use* the AOR's scanning & return results feature. What about ScanCat? Or maybe I get so fed up that I will start to write a program myself that use the AR-8000 RS-232 features as it is meant to be used by AOR.

I used to have the comparable Optoelectronics freqency counter. Personally, I think they're overrated for capturing frequencies "in the wild." As you would have found with the cordless phone, with the freq in the 43.74-49.97 range, you need to be right on top of the transmitting device (a couple of feet at most). I was able to capture cell phone freqs if I was right next to the car phone user in the suburbs; but closer to the city, where there are many more emissions, forgetaboutit. Having antennas and/or filters specific to the range you are interested in helps I would imagine; I never tried it. Sold the Opto 3300 after six months. The special-cut antennas can be quite costly.

You have to realize that no where in the "You've got Questions, We've Got Answers" thing does it say that the answers and questions will be evenly matched. Just about anyone can who is deep into a hobby will tell you to know what you want before you go to Raido Shack if you go at all.

You do have questions and they do have answers, just maybe not to your questions. And even then they might know where you can get is answered and we as good and knowlegeable people might suggest to them where to take people like that instead of slamming them for not knowing everything under the sun.

One possibility that comes to mind is the coating that they put on the outside of picture tube. This is a water based carbon coating called aquadaq. Its purpose is to ground the outside of the picture tube. Look around in a local electronics parts store (I doubt Radio Shack would carry this).

I saw another post that suggested a water based coating. This would be that coating. Aquadaq is a generic name I think.

In reference to the following. When I worked at RS back in the '70s, I knew all my products. The stereos, scanners, CBs, marine radio, parts, computers, etc. There is no excuse for not learning the basics of the products. An RS salesperson does not have to learn your hobby, but they do have to know their products. Therein lies the problem. They don't know their products.

In article <4hoc5e$jcs@pegasus.starlink.com> Bill Funk wrote:

> their products.

Exactly!!! I bought a cordless phone at RS, it was defective so I took it
back the next day. The Manager didn't even know he had that kind of phone.
It then took 30 minutes for him to find out how the phone worked and
confirm that it really was defective. They should at the very least know
all the products they sell, what they are for, what they do. I don't
expect them to know the specifications of every product, but at least have
a general knowledge of how the products work. Some of them don't know the
difference between a CB and a scanner!

5060. RS PRO-2038 Cellular

I was under the impression that a PRO-2038 was not cellular modifiable.
I just bought one that is receiving cellular EXTREMELY well. It also has
frequencies in the 800MHz and 500Mhz bands which this scanner is not
supposed to be able to receive; 870-880 and ~520Mhz stuff, programmed
into it. How'd they do that? Is it a keypad mod?

>We know that Kentucky has strict laws about having Scanners in a car.
>What is the law about having a scanner in my pocket while walking? I
>try to walk every day and like to carry my BC200 with me, I sometimes
>wonder if it will be conficated if found by the Police. Thanks
>
>

Paul: I tried to Email you but it wouldnt go thru, so here's what I know. Kentucky Revised Statute 432.570 sets forth a general prohibition against using a scanner outside your residence or place of business. It lists several exceptions, however. For example, if you have a ham radio license, you can carry a scanner with you (or use your ham radio as a scanner). So if you have your ham license, it looks like you will have no problem carrying the scanner. Just remember the above-mentioned statute and point it out to Mr. Police Officer if needed. Other persons who may carry scanners in KY include newspaper reporters and tow truck drivers. If you don't have a ham license, you could get one. Getting your the lowest level of ham license is not hard - it just requires a multiple choice test that you have to study for. Email me if you have any questions. - Todd

PS - If anyone knows any good frequencies in Louisville, KY or Jefferson County, KY, I would love to hear from you. Thanks.

Well, break the law, suffer the consequence. What a messed up radio spectrum we would have if anyone with a transmitter could claim a space.

Is that not a part of 'Pirate Radio', trying not to get caught?

I have a 70xlt. Coverage is 29-54,137-174,406-512mhz. A basic vhf hi-lo,uhf unit.
I suppose at $35, it is worth it. I am not a big fan of these radios. They are a handy radio--small size, nice keypad--but I find the display hard to read and they are not as sensitive as other Uniden radios. I use mine for listening to the railroads--160-161mhz--and it is not a dx wonder.
If you are on a tight budget and are in a strong signal area than its okay. I would look for a used BC100xlt, if you don't need 800mhz.
Good luck.

I'm going to make an educated guess looking at this map of mine on the
route down the 5 freeway and the CHP jurisdictions you'll be pasing
through. I'll go from north to south.

Yreka 42.400 base 42.160 Mobile
Mt. Shasta 42.400 base 42.160 Mobile
Redding 42.440 base 42.280 Mobile
Red Bluff 42.440 base 42.280 Mobile
Willows 42.500 base 42.820 Mobile
Williams 42.500 base 42.820 Mobile
Solano 42.400 base 42.160 Mobile
Contra Costa 42.400 base 42.160 Mobile
Oakland 42.120 base 42.200 Mobile
San Fransico 42.440 base 42.280 Mobile

Off the top of my head, these should work for coming down the 5. also,
154.905 is the vehicular extender frequency, which is a sort of repeater
for the hand helds. Also scan the blue frequency 42.340 B 42.180 Mobile,
that's where you hear a lot of the aircraft stuff. Sorry can't help you
on the Oregon stuf, all I have is CA. I also have a thousand or so San
Fransico Bay area frequencies if you need them.

In article <Do1Ho9.6oJ@freenet.carleton.ca>, cv282@FreeNet.Carleton.CA says...
> "Ronald P. Cain" (roncain@ix.netcom.com) writes:
>> Yes, it is totally illegal to listen to cordless phones on frequencies
>> between 43.72MHz and 44.48MHz, and from 46.61MHz to 46.97MHz.
>> Furthermore, you are also forbidden to listen to cellular frequencies
>> between 869.040MHz and 891.510MHz. Totally against the law.
> Really? So it's ok to listen to 824-849 MHz and 49 MHz? Cool!!!

Actually the law was pretty poorly written and has some 747-size loopholes in
it.

For example, the law states that for cordless phones, the "forbidden" frequencies
are:

"(A) the radio portion of a cordless telephone communication
that is transmitted between the cordless telephone handset and the
base unit;"

This can be interpreted as meaning that the *base-to-handset* frequencies
are not covered, whereas the specified *handset-to-base* frequencies are
off-limits

There is also a loophole for interference hunting, namely:

"(g) It shall not be unlawful under this chapter or chapter
121 of this title for any person--

"(iv) to intercept any wire or electronic communication the
transmission of which is causing harmful interference to any lawfully
operating station, to the extent necessary to indentify the source of
such interference; or

So if you're looking for the cause of your TV or radio reception being screwed up...
(draw your own conclusions)

An interesting note:

"(v) for other users of the same frequence to intercept any
radio communication made through a common carrier system that utilizes
frequencies monitored by individuals engaged in the provision or the
use of such system, if such communication is not scrambled encrypted.

Does this mean that if you pick up someone ELSE'S cordless phone
on YOUR cordless phone, it's legal, since you are a "user of the
same frequency"?

(These represent my opinions alone, and do not represent those of my employer)

The UBC3000XLT gives you a choice of 50kHz steps anywhere, but the Pro26 only has that step rate on the FM Broadcast band and on TV freqs. The Pro26 also gives you a choice of 10kHz steps in the area that we (in the USA) have CB radio; unfortunately, you can't tune in 10kHz steps on freqs ending in a "5" (ie 27.185, 27.195, etc). So, over here in the USA we must use 5kHz steps when searching the CB band.

I can still get the AR1500 battery packs from AOR, although I'm sure there are local sources where you could find a comparable one that's less expensive. The connector is the main thing that may give you trouble finding a match.

>
> Mark - WA9ETW
>
>>>>
Yes,
Option 1:
Locate and remove R-173 for complete "beep" removal.

Option 2:
Change the value of R-173 to 1 megohm. This should significantly decrease the level of the enrty.

Option 3:
Change R-173 to a 1 meg variable resistor located in a convenient case or external location to vary the
beep on entry.

Good luck,

Gerry - G & G Communications

Thanks to everyone that responded to my earlier posting
for "Uniden Bearcat Sportcat SC150 Info Wanted".

One response claimed that the Sportcat would not
receive cordless freq(s). Can anyone tell me if this
is true? According to the Sportcat's spec(s), one of its'
bands ranges from 29.7 Mhz to 50 Mhz. If cordless
phones (other than the 900 Mhz variety) operate within
this range, what prevents a Sportcat from intercepting
these signals.

>
>Bill

Here's the facts Bill. After I got no satisfaction from Communications Electronics, Relm gave me two numbers of local dealers that I could order the battery from. Neither one called back after they said they would get the price for me. CE surely has the same buying power as these local guys, in fact they are selling the new and improved Relm.

The facts are nobody gives a shit about selling you a $60 part if they have to do a little extra work to do it. Don't be too quick to condemn yourself. And who said this was any part of a conspiracy?

Geez, these scams keep getting better and better! <g> Last week, someone wanted $190 for a 2026, and now it's up to $225...for a radio that can be BOUGHT NEW this month at the closeout price of $149.99!!

And don't send me nasty flames about this one being modifiable and the new ones aren't...that's hogwash! In December (when they were on sale again...this time for $139), I visited two different RS stores and found a total of EIGHT units with modifiable date codes (before 4/94) Tandy has a whole warehouse full of these, and they're trying to get rid of them.

>External Antenna.

>Nate.

I had a Trident2400 (until it was stolen recently at the LAX airport).
It was rather weak in the shortwave bands but I successfully improved
the reception with an active shortwave antenna. RatShack has them in
their program, too. You basically bring the antenna into resonance
(one knob) and then amplify close to the clipping point (second knob).
Comes really handy when traveling alot and trying to stay tuned to
distant radio stations. A long wire antenna may do the job, too, but
it is rather impractical.

Who besides AOR (aka Trident) produces scanners starting below 1MHz?
Which one is the 'strongest' in the low bands?
I need a new (used) one soon.

michael

Mods are modifications you make to your scanner, mainly extended frequency coverage. They are not important, unless it is important for you to intercept those forbidden or unaccessible frequencies. The most common are to unlock the cell phone frequencies.

>When you, as a scanner hobbyist, walk into Radio Shack, why do you expect
>that salesperson to know about not only *your* hobby in deatail, but the
>hobby of all others who walk in?

Could it be that it's HIS FUCKING JOB to know? We aren't talking about wondering around a hobby club outing... Radio Shack tells us that they are the folks to come to with your questions.

Band width? Are you kidding? How long did
>it take *you* to know the bandwidth of *your* scanner?

About as long as it takes to read the catalog giving the specs... Perhaps even reading the back of the scanner. Any salesman who can't read you the specs of the equipment he sells (let alone have it memorized), should go and wash dishes somewhere...

>And, of course, that same salesperson should be able to answer the
>audiophile when he asks for the roll-off characteristics if a certain
>stereo.

If the audiophile is being asked to part with several hundred bux, why the hell not?

>And describe the lobe pattern of the TV antenna for the TV user.
Should be able to direct the customer to the answer.. Perhaps in one of Tandy's own reference books?

>It ain't gonna happen. No way. And to expect all this is unreasonable.

If it's so unreasonable, then perhaps they should rethink the brilliant motto they have inflicted on us.

>
>SO, what should we expect? How about enough so that when a newbie walks
>in, the salesperson can explain what a scanner *is*, and what it will do
>in general terms.

Ain't that what I said???

>
>And, of course, thank your lucky stars that you don't have to work at
>Radio Shack ;-).

Been there, done that... can't you tell????

All states have laws which will penalize those who drive too fast for conditions or in an otherwise unsafe manner.

However, at one time (before many of us were born, probably) some states did not have posted speed limits anywhere. Arizona, I believe, was one. There was a law which allowed people to drive at a "safe and reasonable speed", the speed limit was not dictated by a sign. Doing 90 on an open interstate might have been considered "safe and reasonable".

When the feds mandated the 55 mph speed limit in 1974 (primarily for energy conservation), such speed laws became extinct. But just last year, the feds decided to get out of setting speed laws (instead the states can do it), so who knows, perhaps "safe and reasonable" will come back.

I'm compelled to add that I live on Main Street and there's always cars exceeding the 45MPH limit...

I installed two radar-type alarm sensors/detectors... just pointed one North and one South... I know it works because one of my lodge bros. stopped by one day to ask 'whatthehell' you got in there'?! <BG>

Because the case is warm, two birds decided to nest under one of the sensors last year. Apparently, the parents pushed the eggs out of the nest after a few weeks... I'm looking to see if they will return this year.

It is a frequently asked question, and the answers aren't too encouraging.

MDTs use a variety of encoding and encryption schemes that are proprietary
to the manufacturers. Attempting to decode an MDT signal in the US _may_ be a
violation of Title 18 of the U.S. Code.

That is what happened in Tulsa, Oklahoma within the last year or so.
Tulsa has been trunked for about 10 years and some Private I's got some
local 2-way shop to set up a few Motorola radios for them on at least the
Police's talk group.

Motorola came down on the Private security company and the 2-way shop
like a ton of bricks. The last thing I heard was that an appeals court had
ruled against Motorola, however, so the whole thing is your typical job
security program for lawyers.

My guess is that it is possible to decode the trunking data, though
not necessarily easy and that those who can are doing so quietly, not wanting
to play the lawyer game. It gets expensive.

That's right, boys and girls...Sammy Salesdroid not only wastes your time by asking for your name and address instead of answering your questions correctly, he can also cost you MONEY!!

A few years ago, I was at a Radio Shack back in Minnesota. A construction foreman came in, looking to buy walkie-talkies for his work crew. What do you suppose the salesdroid tried to sell him? CB walkies? NO! GMRS? NO! Yep...you got it....HTX-202's! The droid's exact words were "these will reach a lot further than those (points to CB walkie talkies) and there's more channels, so you don't have to worry about interference." No mention of license, test, callsigns, etc. Unbelieveable!

Radio Shack..."You've got questions, we've got answers. WRONG ones that can get you a $10,000 Notice of Apparent Liability for unlicensed operation in the amateur radio service!"

> and some industrial scrambling
> It goes on after the audio port i think
> I purchased it today but has not arrived yet

I can't believe that this is legal! Do you live in Canada or the U.S.? As
far as I have read it is o.k. in Canada if you pickup some cordless
activity on a scanner (because I guess it would be too complex to avoid it
by blocking out all the scanners in this range, as they do with cell phones).

Isn't it illegal to monitor cell phone freqs? (Let alone descramble them)
I don't mean to appear judgemental here, I am just amazed that this is
possible and wonder if it is legal. The fact that you both have bought
specialized equipment from suppliers and have posted this on the usenet lead
me to believe that it is not an uncommon thing. But is it legal?

:Also, does anyone know the keypad method of modifying my scanner?

No. There is no such thing on the Pro-43.

Sorry to be the bearer of bad news, but them's the facts, Jack...

The Pro-43 has no test mode, nor any method of doing any "keypad mods". The Pro-XXXX scanners that do are a completely different design from the 43, and the info for them is utterly worthless as far as a Pro-43 is concerned.

There are HARDWARE mods for the 43, if it's old enough (pre-ECPA) but if you aren't skilled enough, or willing enough to put a soldering iron into the guts of a rig that's chuck-fulla surface-mount stuff, you're better off leaving things alone. the FAQ on modding the Pro-43 gets re-posted every few weeks, if you think you want to try this method, though. Just keep your eye on the group for a copy. It's about due to be posted again, if the "schedule" holds.

Dear Adam:
My friend, you picked the right newsgroup!!! I am THE AUTHOR of
ScanMan. Unfortunatly, it only lists frequencies in the Alachua County,
Florida area. Yes, it is a good program, and yes it is ShareWare, but I
don't think that it would help you --you're in California! Send me
e-mail sometime and we can chat; I could write you a scanner database
program in BASIC if you like; ScanMan is written in DOS Batch Lanuage.

Those are called VDT's.. some have other names (MDT; Mobile Data
Terminal, and a few others). They are simply
radio-teletype devices that query information from a Tele-Type database
which simply has VIN #'s, DL #'s, and Tag Registration information from
Nationwide data links. This service can not always be listened to on
scanner, and that is the whole point; what, you think they WANT you to
hear when people get a ticket? :)

Doug: When the "Sound Squelch" button is pressed, the scanner will "skip-over" unmodulated signals while searching or scanning. For example, you're scanning local police freq's & for some reason there's a "dead carrier", (a tranmission without anyone speaking) the scanner would stop on that freq for a second, then continue on. There are many bands you can monitor that have quite a few dead carriers and, would be very frustrating to constantly have to hit the "scan" button every time to resume scanning while encountering these carriers.

>JunKie <seizure@fdt.net>

Actually, they are not called VDT's, that is an antiquated term for
Video Display Terminal...in the least this is a nebulous definition of
any dumb (non-printing) terminal. Most are referred to as MDT's. And
far more info is passed over them than just basic query functions. In
many cases PRIMARY dispatching is done over MDT's, too. And
conversations that the police do not want the general public to hear
over audio channels. Some of the MDT traffic can be downright
humorous and sometimes the police use it for more distasteful
conversations.

It is quite possible to listen in on (or monitor) the info passed on
through these terminals as there are many different manufacturers of
these units as well as a few smaller police dept's that have cobbled
up their own systems from off-the-shelf Amateur Radio components.

But the cost is prohibitive. A good multimode TNC (Terminal Node
Controller) can run $500 or over. A DSP unit is preferable. Most
older Police MDT's use AFSK (Audio Frequency Shift Keying). This is
quite a distinctive sound and can be heard as long (or short) BRAAPs.
AFSK works best at baud rates of 4800 or less. 1200 baud to 2400 baud
is common. Many MDT's use an odd baud rate like 1100 or 2100 to make
it difficult for people using low-cost Amateur Radio TNC's from
listening in, as many MDT's use the same AX.25 protocol that hams use
in packet radio. Some even use non-standard audio tones.
Some are encrypted, and there are a few commercial packet TNC's that
have this encryption function built in also. One that I can think of
is the AOR AR1200. It has a possible 65,000 or so encryption choices,
so it could take a while to find the right one, if your local PD is

using this encryption standard. A police officer friend is helpful in this case, especially if he has access to a unit you can inspect. Unfortunately, the AOR AR1200 is no longer distributed in the U.S. to my knowledge. I happen to have one.

Many newer police MDT's use much more complex encryption standards and higher baud rates and/or PFSK (Phase Frequency Shift Keying). This technologly is definitely beyond the ranks of the average scanner enthusiast. PFSK requires a direct connection to a radio's IF section, bypassing the audio portion of the radio completely. Only a few scanners actually are designed with this feature. Any other scanner/transceiver will require extensive modifications to use PFSK.

It is also harder to discern a PFSK MDT in use. Higher baud rates mean shorter packets (often a tenth of a second or so) and phase frequency shifting often sounds like interference, not data.

I would suggest going to a local electronic or Ham radio fest. I often see DOZENS of Police MDT's in WORKING condition that have been pulled from service at such swap meets...as well as technical/repair manuals. While your local PD may have upgraded to newer more expensive toys at taxpayer expense, many smaller PD's may still be using this same MDT. At least it's a conversation piece and may lead you to more insight as to how the units work. Recently I saw at least 30 MDT's pulled from service from the Phoenix PD at a swap meet. They still had the Phoenix Police Logo on them!

Another way to find out about police communications is to participate in a ride-along, join a local police explorers club, or date a dispatcher. It is amazing what you can find out if you act innocent or show an interest in law enforcement to LEO's. I have had the pleasure to be a CO (civilian observer) for the Maricopa County Sheriff's Dept. here in AZ. It was a fun evening, to say the least.

I hope this helps,

Mark Fellhauer

5135. Pro 46 cell mod

Newsgroup: rec.radio.scanner
Date: 1996-03-13 00:00:00 UTC
From: Help@aol.com
Message-ID: <4i5jgl$p1m@sol.mixi.net>
Source record: 238687

---------- Simpler PRO-46 Mod for Unmodifiables---------

It is not legal to listen to other people's telephone conversations with
radio and/or scanner equipment. This modification is provided for
information purposes only, not as an attempt to encourage people to
commit illegal acts. No warranty is offered, or should be implied.

PRO-46 Mod for 'unmodifiable' version

The old pro-46's could be modified for direct entry of any 800 megahertz
frequency by removing one surface mount diode, and moving another.

Since then, the pro-46's internal computer has been modified to ignore
the diode change, and the user was forced to use internal test modes in
the radio in order to receive 850 to 899 Mhz which includes the base to
handset cellular frequencies, among others.

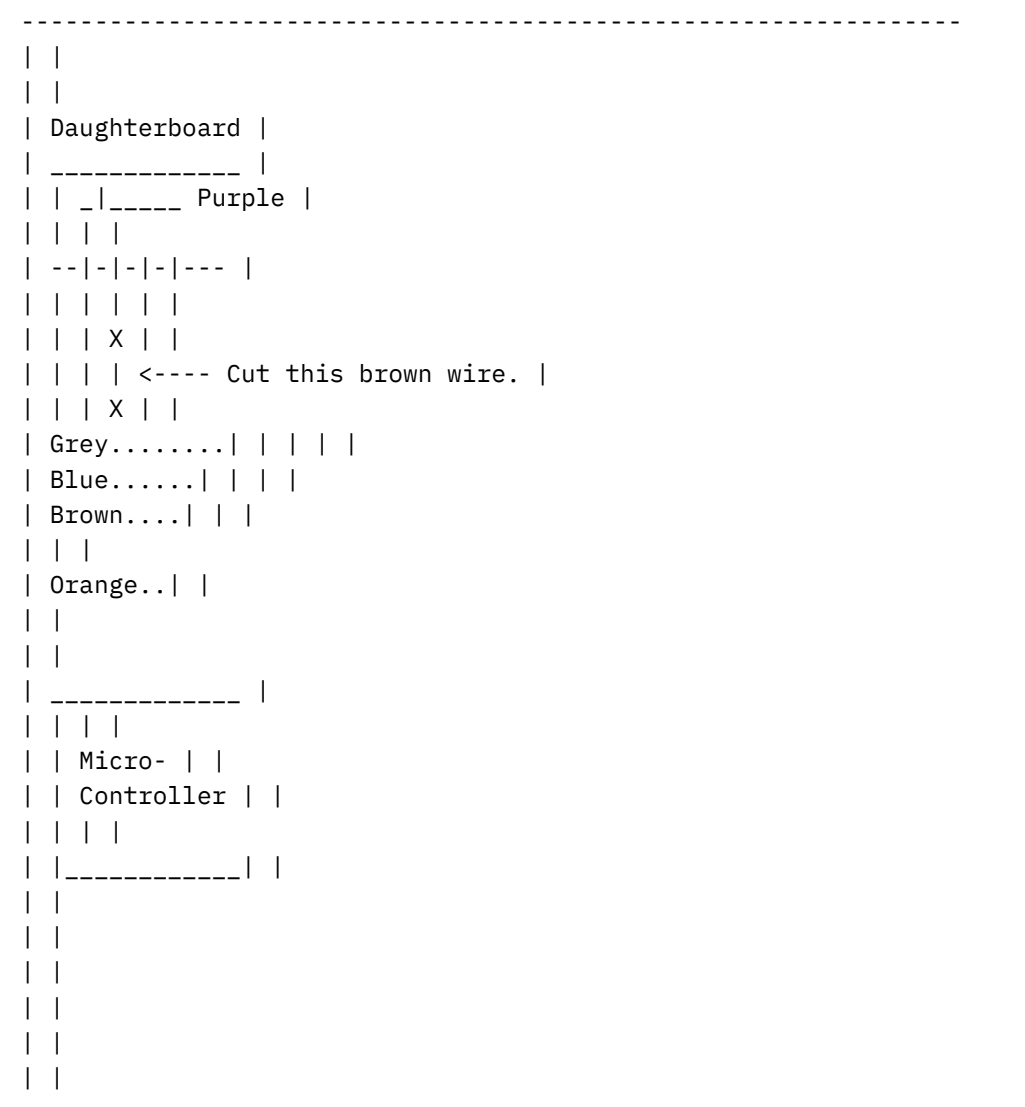
When Tandy found out that people were using the test modes (invoked by
pressing certain keys while turning on the radio) they had several models
of radios including the pro-46 shipped back to the factory to disable
the test mode that allowed access to the cellular base-to-handset
frequencies.

If you have one of these factory re-modified radios, you can still access
cellular base-to-mobile frequencies by disabling the factory re-mod. This
will enable the keyboard test mode again, and then you can use the keyboard
test mode to access the 850 to 899 Mhz. To disable the factory re-mod
follow these steps:

1. Remove the battery pack, battery door and antenna.
2. Remove the four black screws from the back of the radio, then
push upward on the bottom of the rear of the case, carefully
swinging it upward and removing it.
3. Carefully insert a small screwdriver between the two boards
next to the interconnect plug in the lower right corner. Gently
pry the top board up to separate it and set it aside.
4. Unsolder the copper-coated plastic shield from the
microprocessor

and set it aside. ** CAUTION!! Too much heat will damage the
shield. **
5. Locate the newly attached rework daughterboard adhered to the
board above the microcontroller chip. The daughterboard has
five wires coming from it, four across the bottom, and one on
the
right of the daughterboard.
6. Find the third wire from the left on the daughterboard, (this is
usually a brown wire) and clip it.
7. Reverse steps 1-4 to reassemble the radio.
8. Perform the keyboard test mode mod as described at the end of
this
file.

The daughterboard is about one inch wide and 1/4 of an inch tall. It
probably has a piece of black adhesive tape over the top of it and
it has four wires on the bottom of it (Grey,Blue,Brown,Orange) and
on on the right of it (purple). It looks like this:



The rework disable mod is known to work on the following pro-46:

serial number: 450330xxx
model number 20-305
Fcc-id-AAO20-305A
and a white label that says merely: 5A4
From: dbarton@moe.cc.emory.edu ( )
Greetings. Since there have been some requests lately I thought I would
repost this spiffy mod for the Pro-46. This will not restore full 800 MHz coverage, but it will restore the hole b/t 868.9375, and 896.1125 with straight 30 kHz steps. All standard disclaimers apply, including but not limited to the following:

It is not legal to listen to other people's telephone conversations with
radio and/or scanner equipment. This modification is provided for information purposes only, not as an attempt to encourage people to commit illegal acts. No warranty is offered, or should be implied.

PRO-46 TOUCHPAD MOD

This mod will give you access to several frequencies not in the Pro-46's
normal scanning range. It will require you to erase all currently entered frequencies, so I suggest that you write them down on paper *before* you begin this process.

1. Turn off the power.
2. While holding down the 2, 9, and L/Out keys, turn the power back on.

This will erase the currently entered frequencies, and input freq.s into
the first 25 memories. Of particular interest are the freq.s in the following memories:

#14: 66.450
#15: 76.825
#16: 87.425
#23: 888.96

Each of these freq.s is outside of the normal scanning range of the unit.
#14 and #16 are in the TV range, #15 is in the land mobile range, and #23
is in the cellular range.

To use any of these freq.s, first store them in a monitor memory,* then
once you have reprogrammed your scanner you can place them into a regular
memory. You can then use the manual scan feature to search through the ranges these frequencies give you access to. You still cannot enter

frequencies in these ranges manually, but any freq. stored in a monitor
memory can be transferred to a regular memory. Best of luck.

*To place into a monitor memory, open the squelch all the way (so you hear static) and push one of the arrow keys. This will start the manual
scan feature, but the frequency should not change because the squelch is
open. You can then press the Monitor button to store the freq.

Permission is hereby granted to copy, transmit, archive, or send this file by any medium as long as it is reproduced in its entirety. Many thanks to those who submitted the info originally (sorry I lost the names).

No offence taken, Gary. I had a number of people e-mail me and tell
me that they had contacted every possible source to find out whether
mods were indeed possible with the Pro-26, and they had all been told
or e-mailed that the mods couldn't be done, so I can understand your
concerns.
In the meantime, one by one of the same people are telling me now
that they have successfully done the mod(s) and that they indeed work
as promised, so everyone is happy and no harm was done.

Attention All:

I have the following items For Sale:

1 Ericsson/GE PCS-Plus UHF/16 channel/Scanning HT. (440-470 MHz split). It is in Immaculate Condition and includes: 1 desktop standard charger, 2 batteries (barely used), original box, manual for both radio and charger, and blank product registration cards. $400 + UPS COD/Shipping takes it.

1 Uniden-Bearcat 55XLT 10 channel Hand-Held Scanner. Covers approx: 29-54 MHz, 137-174 MHz, and 406-512 Mhz. In great shape, just have no need for it anymore. $40 + UPS/COD Shipping.

1 Clifford 120 VAC/12 VDC- 4AMP I.C.S. Power supply. In great shape. $25 + UPS COD/Shipping.

1 Standard desk charger for Bendix/King LAA100 and LAA105 HT batteries. $25 + UPS COD/Shipping.

1 Realistic PG-80 Onsite paging system. COmplete with control station and one tone pager. Can support up to 8 pagers. COmplete with manual and necessary materials. $50 + UPS COD/Shipping.

1 Overnight Charger for Motorola DPC550 Flip Phone. (Mod # SLN5039C). In great condition. $25 + UPS COD/Shipping

3 Motorola Bravo Plus Digital Pagers. 2 set for 158.700 MHz, and 1 set for 931.1375 MHz. They are in great shape. $35 + UPS COD/Shipping each. If interssted in buying all, I'm sure a good deal can be made.

If interested in any of the above, please feel free to email me for details. Thanks.--

Any of the Uniden/Bearcat models, if they're available by you such as the BC3000 handheld or BC9000 base units.

Also, look for Yupiteru or AOR.

5155. Problem with 2004 audio Help?

Newsgroup: rec.radio.scanner
Date: 1996-03-14 00:00:00 UTC
From: dan@halcyon.com
Message-ID: <4i8dao$scf@news1.halcyon.com>
Source record: 238501
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a Pro-2004 who's audio is intermittent. It has quite a sorted past...

Its previous owner hooked it up to his CB antenna so he would have an external antenna. However he used a antenna "Y" and left the CB base unit connected as well. Apparently it didn't occur to him that the RF from the CB would hurt the scanner. So I got it for $75 and the rest is history. It doesn't receive at all below 440MHz, 450 -470 is pretty bad, but 800-1000 is passable.

So, I have been using it for several years until the audio quit working. The display still did all the right things and the squelch appeared to work. The signal at pin 9 of IC2 (the output of the discriminator) also appeared correct.

For a while if I left the unit on and at full volume, it would start to work (slowly getting louder) after 30 mins to 1 hour. After a couple of times doing that the problem seemed to go into remission. Six month later it came back. This time not as responsive to leaving it on and coming back.

So I started looking at it. The problem appears to be centered around IC3 on PC-1 (the RF board on the top side of the unit. IC3 is a NEC D4011BC with a 1987 date code. If I create some capacitance by holding my finger over IC3 the audio will come back. Usually holding my finger there with very light pressure will keep the audio for about 30 seconds before it fades out. I am not pushing hard enough to flex the board, so I don't think it is a bad solder joint on the main board. I have tried pushing on the board next to IC3 and that doesn't do anything. I also tried pushing on the top of IC3 with a non metallic tool (in the same way that I did with my finger) but it didn't produce the same results. The finger trick seems to work best in the center of the chip. Sometimes I have to rub back and forth across the top of the chip before it will work. My best guess is I am capacitively coupling my body to the die inside of the chip.

Anyone got any guesses? I figure the IC has finally gone bad after 9 years of service. Is that a normal CMOS 4011? Can I replace it with a 4011 that I purchase at an electronics store or is it a radio shack exclusive part? If so, what's the best way to order parts from RS?

Any help would be appreciated.

Thanks

In article <4i8dao$scf@news1.halcyon.com>, dan@halcyon.com (Dan Lawrence) wrote:
>I have a Pro-2004 who's audio is intermittent. It has quite a sorted past...

Here is some updated info. I am starting to wonder if it is a power supply problem. Since I have reassembled the unit, the display occasionally goes completely dead. The back light still works, but all digits are gone. I can turn it off and on, unplug it from AC, and press the reset button but it still won't come back. However if I hit it fairly hard, it will pop back on...

I have also noticed the back light appears to flicker like the inverter is going south on me.

And last but not least, for a while when I first turn the scanner on the audio would work for 10-20 seconds before fading away. If I turned it off and back on it would work again for 10-20 seconds. It did that for about 10 minutes and now has gone back to not working at all.

Does this sound like a power supply problem? If so where is the best place to check the power lines? How many voltages does this thing have? I see a 5 volt regulator, so there must be at least +5 :)

Thanks

Lines changed since the previous issue are marked with a |
character in the right margin.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and
larger book stores for under $13. Police Call is basically
a computer printout of FCC license information in the fire,
police, local government, and conservation services in two
lists: by licensee name within state, and by frequency.
Later editions have included a few pages of local airport
and nonsensitive federal government frequencies. The 1996
edition contains selected business frequencies, too, but
callsigns are listed only for local government and public
safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local

agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information

fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 50 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542
Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto

terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s]

missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

>The display computers are dumb terminals connected to a server in the managers
>office.....

I think he meant the computers that are on display. You know, the ones
that are for sale, not for sales. I remember a long time ago, I used
to go into the nearest RS after finishing my paper route and program
the Coco's to print trash about RS on the screen. I gave them papers,
so they didn't complain too much.

Like:

```
10 CLS
20 ? "DO YOU NEED HIGH QUALITY ITEMS AT A DECENT PRICE? (Y or N)"
30 INPUT A$
40 IF A$="Y" THEN GOTO 50 ELSE GOTO 60
50 ? "YOUR IN THE WRONG STORE THEN. PLEASE LEAVE"
60 ? "YOUR IN THE RIGHT PLACE! WELCOME TO RADIO #$%@"
```

But, like I said, that was a long time ago. I must have spent tons of
money there over the last several years though. Let's see... COCO,
COCO II, HTX-100, TRC-512, HTX-212, PRO-2035, GMRS 10-ch *NEW*,
PRO-44, TRC-216, TRC-472, VHF/SWR, DIGI PWR/SWR, DSP, CROSSBOW ANT, 2m
MAG ANT, SPKR MIKE,.. ETC

The equipment is good, but you can't re-sell it.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS |
last updated March 14, 1995 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (708)979-5414, electronic mail: |
parnass@lucent.com. Thanks to Dennis Dale and ARRL for
providing information.

MARCH

Mar 10 (Sun), Waukesha, WI - SE Wisconsin FM Amateur
Repeater Society Swapfest, Waukesha County Expo Center
Arena. Exit 294 on I-94 west, then south on C.T. 'J'.
Setup at 6 AM. Admission $5 at door. Talk-in 146.820 MHz.
VEC testing. Info: (414)650-0724.

Mar 24 (Sun) - Computer Central, Harper College (see notes
at the end of this article).

March 24, Sunday: Sterling, IL - Sterling-Rock Falls Amateur
Radio Society hamfest 96. Info, call Lloyd Sherman,
(815)336-2434.

March 31, Sunday: Grayslake, IL - LAMARS hamfest, Lake
County fairgrounds. Admission $5 at gate, free parking.
Setup at 6 AM, doors open at 8 AM. VEC testing. Info:
Francis Avellone, W9GLO 650 Green Bay Rd., Lake Bluff, IL
60044, tel (708)234-4124.

APRIL

April 14 (Sun), Madison, WI - Madision Area Repeater Assn
Swapfest and Computer Fair. Dane County Expo Exhibition
Hall. 4 miles west of Hwy 12 & 18 and I-90 interchange.
Watch for Rimrock Road exit. Doors open at 8 AM. Admission
$6 plus additional parking fee. Kids 10 and under free.
Talk-in on 147.15 MHz, PL 123.0 Hz. Info: (608)245-8890.

April 21 (Sun), Arthur, IL - Moultrie ARK. Info: Ralph Zan-
cha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see
notes at the end of this article).

April 28 (Sun), Chicago, IL - Chicago ARA Ham Auction.
DeVry Institute of Technology, 3300 N. Campbell Ave. starts

at 12 noon. They will auction your electronic goods if you bring them in before noon. All goods subject to 10% donation. If purchased back by the seller, then 5% will be due. All items sold as-is and all sales final. Info, call Dean (708)331-7764 morning or evening, or call George (312)545-3622 daytime.

MAY

May 5 (Sun), Sandwich, IL - DeKalb Hamfest. Sandwich Fairgrounds, intersection of Suydam and Gletty Roads, just north of Rt. 34. Admission $6 at gate, free parking. Talk-in on 146.73 MHz and 146.52 MHz.

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Will County Fairgrounds, I-57 to exit 327 east. Admission $5 at gate, free parking. Kids under 12 free. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun), Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell. 8 AM - 3 PM, setup at 6 AM. Admission $5 at door, free parking. Kids under 12 free. Talk-in 147.225, 444.825. Info, call (312)545-3622 or (312)486-6823.

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 2 (Sun), Princeton, IL - Starved Rock RC. Bureau County Fairgrounds. Admission $5, free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun), Willow Springs, IL - Six Meter Club of Chicago. Santa Fe Speedway, 91st and Wolf Rd. Gates open 6 AM. Admission $5 at gate. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922. Good hamfest but, restroom facilities are usually filthy.

Jun 30 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC testing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Hamfest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Admission $5. Kids under 12 free. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

5162. PRO-26 Mod WORKS!!

Newsgroup: rec.radio.scanner
Date: 1996-03-14 00:00:00 UTC
From: JWyke@gnn.com
Message-ID: <4iahmr$3ih@news-e2b.gnn.com>
Source record: 238508

I ordered the mod info from ron.roth@ghbbs.com, and IT WORKS VERY WELL! I was not sure what was involved until I actually tried it myself. It works. He also has a mod for the backlight and one to delay the "low battery" warning when using rechargeable batteries.

I will not post the mod info, nor will I answer e-mail concerning the particulars. Ron is the one to contact, and the 4 measley bucks is VERY reasonable. He is a very nice guy, and he is obviously NOT OUT TO RIP YOU OFF!!

I had contacted several sources prior to contacting Ron. They all said, "No Mod available for the Pro-26."

THEY ARE WRONG. There IS one, and it is VERY EASY TO DO!!

I don't blame you for being skeptical, but throw your skepticism away and contact Ron. He will get the mods to you right away.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed | Oct. 25, 1994, amended the law (Title 18 USC, Part I, | chapter 119, sections 25110 and 2511) and outlaws listening | to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend

reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two

companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions contain selected business listings, too, although callsigns are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees,

listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about

$100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall

security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an

outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $27.00 per year, which includes the monthly Scanner Journal, approximately 50 pages in 8-1/2" x 11" format. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

All meetings are held on Saturdays at locations announced in advance. The next few meetings may be held at the Destiny Restaurant, on Rand Road, in Des Plaines, IL.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Abstract

This article contains product review summaries for more
than 60 old and new scanner radios and monitor receivers.
Other topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other
radio hobbyists. This article describes a few of the FM
receivers in my collection, and is not meant to be
complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had
sellers look me square in the eye and tell me their radio

worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Grove Enterprises (Brasstown, NC) and Radio Shack repair scanners, and Uniden can repair newer Bearcat models but often refuses to service older models. G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making

scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. A few years ago, the Regency and Bearcat scanner lines were purchased by Uniden, a Japanese company, and production was moved to Asia.

My favorite VHF/UHF receivers are the 400 channel Radio Shack PRO-2005 and PRO-2006, the Uniden/Bearcat BC9000XLT, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the Radio Shack PRO-43 and Uniden/Bearcat BC3000XLT.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews of these recent scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042

Note: Reprints of Monitoring Times articles are available for $2.00 each (plus self addressed stamped envelope) from | Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this $2.00. |

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's

a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in

binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light

panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner

unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The

most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced

with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size.

Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a

transmission.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1985 vintage. Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1984 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band

reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by

Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For | more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

I own a cheap General Electric boombox (about a $100 in value) that is a few years old. It works well but when I am on a certain FM channel listening to my favourite station, I intermittenly pickup actual radio transmissions from overhead commercial airliners. These are actual commercial airline communiques to the tower and back. I know it is because the pilot states the airline and other info. like heading and other number jumbo stuff. This is a simple radio with no short wave or any extra bells or whistles and it works well except for the fact that every so often it interupts the music and I hear aircraft communication messages. Does anyone have any idea what causes this? I thought Commerical Airline bands were totally different and not even close to the FM bands.

Thanks greatly!

Peter

A couple years ago I was passing thru Tonopah, NV. You know, home of the F-117a, Tonopah Test Range, Nuke bombs, ect... I needed to get a few battaries and wandered into the local radio Shack (aka Twilight Zone - due to the dimwits who worked there). I noticed that there were NO scanners anywhere in the store. I asked about it and was told that scanners wouldn't work in or around Tonopah due to an "electric fence" that bordered the test site and eliminated all radio transmissions.

I swear that this is the truth! The space cadet behind the counter REALLY said "all the radio transmissions". Well, not being one to pass up an opportunity for either sarcasm or understanding the mediocre nature of some human thinking I whipped out my AOR-1000 and said, "what about this stuff". I flipped a few channels before I found the NHP dispatch, an FM radio station, a tow truck, and a cordless phone.

The guy told me that the cordless phone worked because it was in a different "band". I asked about how the police and fire depts were dispatched and he told me that they had special authorization from the military so their radios worked. When I asked about why my scanner worked since I didn't have the special authorization and he told me that I would get in trouble if I used it in Tonopah. Well, THAT certainly convinced me that I shouldn't be using an a scanner that wasn't specifically "authorized" by the military.

I finally left the fine establishment shaking my head in amazement. They actually PAID this guy to work there and meet potential customers. This specific guy had no business steering a mule pulling a plow. He certainly wasn't worth what he was being paid even if it was a dime per hour!

On the other hand I have some very good experiences from some RS employees. Guess it's all in the mix. Sometimes people with our hobbies go to work for RS and sometimes the person waiting to serve you is a candidate for a management career in aluminium siding sales. I also HATE it when the dip behind the counter asks can I have your name and phone number??? !!!

NO. Here's your money, give me my part!

I agree they're hard to listen to but I found one advantage. Here in
St. Louis they use a device the manufacturer calls smart line. Lets the
coppers dial into a telephone line and make calls. Pretty convenient
for them but many use it to call home and talk to sposes, girlfriends,
etc. It's like listening to cell phones. Some of the PD conversations
are also enlightening. Local TV stations have gotten some good info
from the calls.

I actually worked to RS during two periods of unemployment from "real" jobs, and I must admit that I was the resident scanner/ham "expert", having been involved in the monitoring hobby since 1971 and a licensed ham since 1985. But most of those in this newsgroup are right: the average RS "salesdroid/dweeb/whatever" can't answer anything more than the simplest questions on these things.

Re: ham radio

Customer: How far can you talk with it?
RS SalesGuy: About 5 miles

Re: Scanners

Customer : What are those?
RS: Scanners
Customer: What do they do?
RS: They pick up police calls and stuff.
Customer: Why would you want to hear THAT?
RS: I dunno.

I have seen small boxes in catalogs that claim to convert 800 down to 400 for use on scanners. Are these 'magic' proprietary devices using special chips or can they be built out of a handfull of parts? I'm interested in finding schematics; provided it could be build by someone who has only taken EE101 and does not own a shop full of equipment ;-)

5181. Re: FUN at local Radio Shack

Newsgroup: rec.radio.scanner

From: bob2006@aol.com
Message-ID: <4i9r6a$j6g@newsbf02.news.aol.com>
Source record: 238527

It is not their lack of knowledge that bothers me so much as the fact that they make stuff up as they go along. Not long ago I was looking at cell phones at a local RS store. The salesperson asked if I had a question. I asked about scanners being able to pick up the conversations. "Impossible. It is illeagle" was the reply.
I was also told that even if it were possible a person couldn't do it because they jump from cell to cell at lightning speed. Imagine the suprised look when I whipped out my BC2500 and started filling the store with cell phone conversations. But in their defense, The wage is very low and so is the commission and they hire on a walk in the door basis. I think the president of RS should start a Web page so he
can see how we feel . My opinion is that the only reason they are still in business is that they are pretty much the only game in town.

That's pretty funny. I live a few miles from Air Force Plant 42 in
Palmdale, where the Lockheed Advanced Development Company works on the
F-117A aircraft. I regularly hear the F-117A pilots calling the Palmdale
tower (123.700MHz) - they use the tactical callsign 'Dagger' with a number.
One day, I was drivng by the complex and saw a F-117A flying over the
runway. I turned on the receiver in the car, and heard the pilot
calling the tower every now and again to gain permission to cross the
runway, even while the aircraft was already banked over in a steep
turn. The pilot was making turns that would probably make me pass out,
and he was casually chatting with the tower at the same time!

Who wrote "What"?

You didn't include any reference lines, nor any referenced quotes.

I'd have to say, from all the evidence I see, Jack Clark whote _it_.

I've developed a scanner antenna (indoor) that attaches like a ducky, but offers directivity and excellent signal quality. I built one (cost of parts, about $4.00) and picked up all of the cellular images on a Pro-26 from INSIDE my house. Also much better reception on all frequencies. I'll mail anyone plans for $5.00 U.S., plus SASE. Specify main tuning frequency you require between 300 MGz to 1200 MGz.

Send SASE and $5.00 to:

Get with it Ken! *THAT* story alone is worth what they payed the
droid for a year... even if it's two dimes per hour.

If word ever gets out that this dude works there, that Shack will
have a flood of prospective customers flocking through its doors...
probably buying nothing more than a battery, but still, 10,000 $0.39
cent batteries is a lot of money.

I myself would be willing to buy TWO $0.39 batteries as the price of
admission to this spectacle. I'm sorry... I guess I have been a bit
harsh on the RS droids. Now that I see the deeper seated business
plan, I've got to say, "How can it lose?"

Jolly good show Radio Shack.

There are *lots* of ways radios can respond to unwanteds. My guess is
that the FM frequency subtracted from the the airband frequency yields
a number that would waltz its way straight through the IF circuits in your
GE "boombox". You have something causing a non-linearity to allow mixing
distortion of this kind. A corroded connection.. a strong out of band signal
driving the GE front end too far...etc.

A bandpass front end filter would probably cure it.

5199. BC9000XLT versus PRO-2035

Newsgroup: rec.radio.scanner
Date: 1996-03-15 00:00:00 UTC
From: tatkins@unix1.sncc.lsu.edu
Message-ID: <4iccan$l1o@unix1.sncc.lsu.edu>
Source record: 238345

I am planning to make an investment in a "serious" scanner. I am told that these two, the BC9000XLT and the PRO-2035, are two of the best for around $400 new. I would like some comments from people who have owned either one or both of these units regarding their overall satisfaction with the unit and what they like most about it. I am sure this question has been asked over and over, but I need to know as I plan to make a purchase soon. I want to buy a brand new unit, and I can't spend over $400.00. And finally, are either of these two capable of being modded for full 800...I haven't seen any mods for either one, and if not, then are there cell images that come in clear at other freqs on each unit? Thanks for your time.

I guess I have to keep waiting also. On February 18 I sent the following email to Radio Shack HQ in Texas:

"I had a frustrating experience with your Cooper City, FL store today. The hour posted for closing is 5 PM. I saw a sign in the window at 4:53 PM indicating "CLOSED". I parked and was at the front door by 4:54 PM. Two employees were in the store, one behind the counter, the other leaning on his elbows onto the front of the counter.

I knocked at the door and was totally ignored. I knocked again, very loudly, and the young man got off his elbows and pointed to his watch and looked away. I had to knock agin loudly for him to look up. I shouted that it wasn't even 4:55, and I just wanted to buy a book. (I had seen the book there before) He again pointed to his watch. I then shouted: "What do I have to do?!? Write to Tandy in Texas?!?" He then conferred with the person behind the counter, pointed to that person, and shrugged his shoulders.

I am well aware of the retail business and closing a unit for the day. If the store has 5 PM posted as closing, and it is known that a customer wants to make a specific purchase taking about one minute, serve the customer - or stop leaning on the counter, close the store and go home.

This is the SECOND time in the past two weeks I have had a bad experience with that store. I'm just too annoyed to keep writing!"

Radio Shack responded on February 19 with:
"Thank you for your E-Mail. It has been directed to Mr. Moe Lucena, RadioShack Regional Sales Manager.

Expect to hear from Mr. Lucena or one of his representatives shortly."

Well, it's March 15, and no reply yet. I'm not holding my breath for a reply.

5211. Lw/mw/sw & skip

Newsgroup: rec.radio.scanner
Date: 1996-03-15 00:00:00 UTC
From: Brian.Petersen@604.sasbbs.com
Message-ID: <7cc_9603180621@sasbbs.com>
Source record: 238357

I have heard the terms "Long Wave", "Medium Wave", and "Short Wave" bands used for a long time, but never thought of asking what the frequency ranges are for each of these "bands"? So, here I am. Does anyone know what they are? :)

Also, I have a question pertaining to skip. It seems as though AM radio stations (such as KFI 640 Los Angeles) travel long distances at night due to the phenomenon called 'Skip'. I know what skip is, and how it happens, but what I don't understand is this. AM broadcast band skip happens on a nightly basis, but only at night. But for services such as HAM radio or CB near the 10-11 meter bands, skip PRIMARILY happens during daylight hours, but only on SOME DAYS ... not every day (or rather, night) as with the AM broadcast band. Why is this?

Please reply to: brian.petersen@604.sasbbs.com

THANK YOU!

>>FM bands.

Actually, they're quite close - right next to eachother. The VHF
aviation service starts right where FM broadcast ends. 108 to 136 MHz.

>
>I probably won't know the exact answer due to your location not being in
>my area! However, are you in the proximity of an AGA (Air-Ground-Air)
>station, used by Air Traffic Control for AGA communication? If so then
>it is simple breakthrough, as we tend to use quite high powers.
>

Probably not "breakthrough" (whatever that is - a term for front end
overload?). It's most likely exlained with the answer to a common radio
license test question - What is the most common reason for hearing air
traffic on an FM broadcast receiver? Answer: IMAGE RECEPTION. This is
the text book scenerio for images.

What's an image? (for the person who orignally asked about this). 2
times the intermediate frequency of your receiver, plus or minus the
tuned frequency will give you the image (+/- depends on whether you have
a hi or lo IF). 10.7 MHz is a very common IF in consumer FM radios. 2 x
10.7 = 21.4. So if you are listening to a station at 101.5 you may hear
nearby air traffic using 122.9. Or 101.5 x (2 x 10.7) = 122.9.

The front end of the receiver should attenuate most out of band signals
before they get to the first mixer amp. But a transmitter closeby could
squeak through (OK - breakthrough). The audio level is usually pretty
low since the aviation service uses AM for voice comm but it can still be
heard on a typical FM receiver.

It doesn't take a rocket scientist to figure out that the faster you
driver, the less time you have to react to unexpected conditions.
Also, the more likely a vehicle failure will cause you to lose
control. From my observations, 99.99 percent of "accidents" are
caused by speeders and tailgaters. I put quotes around the term
"accidents" because they aren't really accidents. The reckless driver
of the vehicle caused the crash by driving carelessly.

Its comical to see people trying to defend criminal behavior. Rather
than inventing wild schemes to rationalize speeding, why don't you
just obey the law like a mature adult, and you won't have any problems
with the police.

: few years old. It works well but when I am on a certain FM channel
: listening to my favourite station, I intermittenly pickup actual radio
: transmissions from overhead commercial airliners. These are actual
: commercial airline communiques to the tower and back....

Quite obvious what's going on here. This is a classic case of "image"
reception.

Suppose your FM radio is tuned to 100.3 MHz. Inside the radio, the local
oscillator runs at 10.7Mhz above what station you are picking up, in this
case it would be 111.0Mhz. When you mix the two signals together, one of
the things you get is the difference of the two signals, or 10.7Mhz. The
radio is tuned to amplify and detect 10.7Mhz.

Remember that the oscillator is running at 111.0Mhz, suppose an aircraft
transmits on 111.0+10.7 = 121.7, the difference between these two is also
10.7 and the radio can also demodulate this.

So your FM radio is capable of receiving signals which are 21.4 Mhz above
the dial setting of 88-108, (119.4-139.4), these frequencies are mostly
used by aircraft. However, the front end of the radio is supposed to
tune out these frequencies, so the aircraft signal has to be pretty
strong for you to pick it up.

Most, if not all, scanners (unmodified) can receive cellular frequencies
through a similar technique. Even though they cannot tune cell freqs.
directly, it is normally easy to find another frequency outside the cell
band which will allow them to be picked up.

Dana Myers (myers@West.Sun.COM) wrote:
: That's pretty funny. I live a few miles from Air Force Plant 42 in
: Palmdale, where the Lockheed Advanced Development Company works on the
: F-117A aircraft. I regularly hear the F-117A pilots calling the Palmdale
: tower (123.700MHz) - they use the tactical callsign 'Dagger' with a number.
: One day, I was drivng by the complex and saw a F-117A flying over the
: runway. I turned on the receiver in the car, and heard the pilot
: calling the tower every now and again to gain permission to cross the
: runway, even while the aircraft was already banked over in a steep
: turn. The pilot was making turns that would probably make me pass out,
: and he was casually chatting with the tower at the same time!

That area has always been fun for monitoring. You certainly have a great opportunity to catch "goodies". I've spent many a night hanging out around Saddleback Butte and the rear gates to Edwards with monitors crunching the freqs.

Just didn't have the heart to hassle the poor misinformed RS sales guy in Tonopah! After all, what can you say? to set him straight would've taken years...

Another desert story...
One of the *BEST* times I had was when I monitored a flight of FA-18s as they entered the MOA at the north end of Panamint Valley. I pulled the motorhome off the road and got out with the handheld.

The pilots were making a low altitude speed run down the valley. The wingtip vorticies were really kicking up the dust as they zoomed a few hundred yards west of the hwy. I had the binocs tripod mounted and was eye to eye with these guys as they flew by. The lead commented to his no.2 about us and I waved. The lead pulled back and rocketed straight up. No. 2 wagged wings and followed with a spiraling climb.

On the way up No. 2 said, "Looks like that guy out there has a radio. Suppose he can hear us???"

The lead said, "Lets go find out." And they DID... they made another low pass and I held up the radio and waved and jumped up and down like an idiot. They told me to point down range if I was listening. I did.

Lead said, "I guess he's on our preset".

They made a few more passes and said "So long. Maybe you'll see us again." I had to go change my shorts!! WAY COOL!

Ken

Well...why don't you (or your newspaper employer) apply to the agency(s) in question to get one of their radios programmed on their system. I do believe there is legal precendent for media outlets doing this. Both Oakland, CA and Tulsa, OK come to mind, but I'm sure there are others. If they are willing, they will probably program a radio with the basic dispatch talk groups. I doubt they would program in the more "sensitive" talkgroups.

Give it try...all they can say is NO!

Regards,
DOUG

P.S. If you end up with just a scanner, I'd recommend the Bearcat/Uniden BC9000xlt, though Uniden is rumored to have a couple of new top of the line models in the works that are "supposed" to be the best ever....we'll see!

5238. legality of listening to cordless and cellular

Perhaps some people have been asking $450 for a PRO-2006, but do you
really believe that they're selling for that price? As you point out, you
can buy them for a lot less, so I'm not sure what your point is... Anyway,
I'd be interested in knowing where you bought a new PRO2006 for $325. Even
when they were widely available from RS, the going rate for a new unit was
closer to $350.

: Ed,

: I work on a Motorola Trunked Radio System for the City of Toledo, Ohio
: and we have set up regular trunked radios as scanners.

: Limited scan is even available on the older STX portables for 5/6
: talkgroups per personality.

: My STX is currently set up for 6 different personalities (police,
: fire, utilities, management, service, and police/fire mixed), so I can
: go where the action is!

: On a Motorola system, lots of information not readily available to
: the public, is required to do this.

: And then there is the System Key...

: It is also possible to do the same on the higher tier Maxtracs
: (C5/C6's)..

: This does make for a pricey scaner even IF you could get someone to
: program it for you, and they can remotely kill it at any time with
: just a few keystrokes :-(

: If you could somehow get a regular scanner to do what you want, you
: would then be pounced upon by Motorola's Corporate Legal Staff who
: would surely accuse you of violating their "Intellectual Property"...

: Does this help any?

: Dave

I think the main idea here would be to be able to passivley following
trunking signals. By actually using Trunking radios to listen to these
frequencies wouldn't that be considered active listening, because the
radio must request a key? Would it possible to monitor these frequencies
with the use of two scanners and a computer or intelligent controller? I
figure why not set one scanner to monitor the trunking data channel, pipe
the data into a computer, have the computer sort out the data and

determine which mobile unit is requesting service and program the second scanner to the frequency in use. The user could set up the computer to monitor certain mobile keys to determine if the call came from police, fire, preffered units etc.

By being able to do this, they couldn't turn you off with a matter of keystrokes, in fact, they would never know you where listenening at all. Also if this is possible , it should not violate any "intellectual property law".

I have a limited understanding of trunking signals and this was a late night brainstorm of mine. Anyone know if it could "hold water" or not?

>Does this mean it's legal to intercept scrambled signals (that may be
>decodable, say like speech inversion)?

I interpret this as saying that--at a minimum--if it's scrambled, it's off-limits.

This paragraph was in the exception clause, namely, if this condition is
met, then it is not illegal to tune in.

The legalese about "other users of the same frequency" makes me think
that this clause makes it legal to listen in if you use your cordless phone
instead of your scanner since the cordless phone is intended for "use"
of the frequencies. Hmmmm... Gray area...

(These opinions are personal and do not reflect those of my employer)

Most directional TV antennas are log periodic dipole arrays (LPDAs) witch means that the entire antenna is active over a pretty wide bandwidth. If it is a VHF TV antenna it should work well anywhere from 50 Mhz to 300 Mhz.

On an LPDA there really isn't any one set of elements that are cut for a particular frequency. If you are using it to receive 144 Mhz it will just use the resonant region of the antenna for it.

Removing elements can effect the performance of the antenna over it's entire opertaing range. TV antennas are pretty cheap. You might just want to go out and buy a smaller one - one that was designed that way.

I probably won't know the exact answer due to your location not being in my area! However, are you in the proximity of an AGA (Air-Ground-Air) station, used by Air Traffic Control for AGA communication? If so then it is simple breakthrough, as we tend to use quite high powers.

If you do not then I would put the radio up for auction, or patent it!

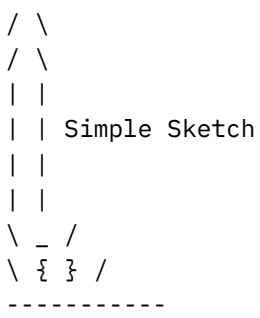
"Criminal" ooh. Actually it's an infraction, you don't go to a "Criminal"
court.

5250. HOW do I Build THIS INCREDIBLE AM BOOSTER DEVICE ?

Newsgroup: rec.radio.scanner
Date: 1996-03-15 00:00:00 UTC
From: ralph@TeamInfinity.com
Message-ID: <4ick5n$4gn@dialin01.teaminfinity.com>
Source record: 238491
Cross-posted to: rec.ham-radio,rec.ham-radio.swap,rec.ham-radio.packet,rec.radio.scanner,rec.radio.shortwave

HOW DO I make this INCREDIBLE AM RADIO BOOSTER, for AM DXing ?



I am looking for actual plans to build the above AM Antenna Booster device. It is a REMARKABLE device in that it takes no power or batteries, does not actually attach to your AM radio in any way, just needs to be near it, and IT BOOSTS FARAWAY AM RADIO signals like you would not believe ! It also appears to be incredibly simple to build, if only I knew how.

This device, which I have seen once is made of wood, the large cirlce is a hoop of (perfectly circluar unlike the drawing) and about 18 inches in diameter, and the hoop width is about 3 inches, there is a band covered with cork in the middle of this hoop I presume covering copper windings.

The small circle in the bottom of the larger hoop is a small cylindrical device of unknown composition. The axis of the hoop and the small cylinder are parallel. The small cylinder in tangent to the hoop's inside.

There is also a dial that I assume tunes the device.

I hear that it is an inductively coupled LC resonator (equivalent to a small loop) which should be regarded as the primary of a tuned RF transformer, the secondary for which is the ferrite-cored loop within your ordinary AM radio.

They further went on to say that as such one needs to couple them (your AM radio and this device) in the appropriate manner, depending on the orientation of the ferrite in the AM radio (they find its not necessary to put the secondary (your AM radio) into the loop).

Any help and actual plans would be GREATLY APPRECIATED:

Ralph@TeamInfinity.com

5253. MODS! MODS! SCANNER MODS! Press Release

Newsgroup: rec.radio.scanner
Date: 1996-03-16 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <314b0294.658875421@192.188.72.19>
Source record: 238295
Cross-posted to: alt.radio.scanner,rec.radio.scanner

PRESS RELEASE: MODS - MODS - SCANNER MODS! NEW TECHNIQUES!

There is an increasing effort of getting "all the mods" from my three books and the five years worth of my monthly newsletter, "The World Scanner Report". Some people can't afford the cost of the whole banana, and others don't want to wade through so much material to get at the several hard core scanner mods that interest them.

My three books are still the mainline route to a full-scale, all-out frontal assault on your scanner. My monthly "World Scanner Report" still enhances the books with updates and current information, including exploiting new turf. Among the books and the "World Scanner Report", the compleat scanner hacker probably needs everything. That's fine for the purist and the dedicated hacker. But what about the rest of you?

I've got an idea! First of all, I developed a streamlined, easier approach to doing the more complicated mods -- the ones that require a bit more effort than "clip-a-diode" or "add-a-resistor. I have developed an almost foolproof method of constructing even the most complex circuits; a method that can be followed by even the dedicated couch potato!

Secondly, I have incorporated this methodology into the production of KITS that will eventually include just about all the scanner mods of which I am aware. Each KIT consists of at least one major mod, structured to be complete and self-contained, and yet available to the tightest of budgets. I'm talking about a detailed Instruction Set and Kit of parts for each mod that will be in our inventory. Kits will be available at several levels to suit the most demanding budgets and preferences:

1. INSTRUCTION SET ONLY. Instructions typically consist of 6 to 8 pages of laser-printed, type-set quality text and graphics. Photos and detailed drawings are standard. For many people, the Instruction Set will be all that's needed for total success with a given project. The price of each quality Instruction Set is an affordable $5.00, ppd, domestic, and US$7.00, foreign.

2. BASIC KIT OF ESSENTIAL PARTS consists of the detailed Instruction Set and a bag of loose, essential parts, generally sufficient to do the mod. Not included in the Kit are items of personal taste and choice, typically switches, LEDs, potentiometers, and certain items of higher expense that the hobbyist might already have in the junk box, or can acquire at lower cost on his own. The price

of a Basic Kit is typically $19.95 + $5 S&H, domestic, and US$29.95, foreign. Some Basic Kits cost less, of course.

3. BASIC KIT WITH OPTIONAL ITEMS. Same as Item 2, except that higher cost, harder to find parts may be offered at additional cost. Optional items may include a pre-cut and sized perfboard ($1 extra) or a printed circuit board, ready to stuff with parts ($5 to $15 extra).

4. ASSEMBLED/TESTED CIRCUIT, ready-to-install. Consists of Item 2 and possibly any essential Item 3 options, professionally assembled and tested. Generally ready for the hobbyist to install.

Cost varies per mod and level of complexity.

5. COMPLETE INSTALLATIONS of all Kits and turnkey bench services available. Cost varies widely from one mod to the next and how many are done at one time.

* Timely tech support on all mods and Kits is available by e-mail, postal mail, and in some cases, fax.

We can also develop specific modification Kits for scanners and mods not in our current inventory. To do this, we must have a copy of the Service Manual for your scanner, and you must lend us yours if we don't already have one. You must also have access to Internet E-mail so that we can work together in a timely and quick fashion to perfect the procedure for your scanner. The price for this custom service will not appreciably exceed a comparable standard Kit, but the procedure may require a beta test process and some trial and error effort by the hobbyist.

For more information about our growing line of Scanner Modification Kits and services, see below:

>
> Eddie Beverly

dear Eddie,

I have had the same problem. But, I recieved a little tip from
the one of RS's managers (one that really does his job) that it doesn't
matter any more if you find an old date code because most were all sent
back to uniden to be blocked(the mod). Word is if there is a green dot
on the box it has been sent back! I got mine by buying the shelf model.
Which due to it being on the shelf slipped through the loop of being
blocked.
So your best bet is to go to RS's and try out there models and
hopefully you can get one that has either been returned so it missed the
recall or a shelf model that slipped through!

Best of luck!

Commercial airline frequencies are just above the statndard FM broadcast band. Your radio probably has a "cheap" tuner that doesn't just zero in on the desired frequency, but is subject to interference on nearby frequencies when a transmitter operating on those nearby frequencies is nearby (gee...how many more times could I squeeze the word "nearby" into that sentence?).

What's happening is your radio is probably tuned to an FM station near the upper end of the band (around 107-108mhz) and you're probably under a flight path. When a plane is nearby (there's that word again) and the pilot transmits on one of the lower airline frequencies, your radio's less than discriminating tuner picks it up.

Whilst that is very feasible, due to the low powers transmitted by
aircraft (RX levels of the order of less than -90dBm even with the sorts
of aerials and masts etc., that we use in the CAA !) then I would
imagaine that the aircraft must be relatively low when overflying his
property to cause these signals to be strong enough to swamp the radio.

> My only question as to cell mods: WHY?Bearcat are better than anything RS sells? Funny thing is most of what
RS sells is made by Uniden. The other radios are made by G.R.E. General Research of Electronics in Japan. The GRE radios in the past the Pro-2004, 2005, and 2006 have blown away anything Uniden has ever dreamed of. Funny you should mention better sensitivity on the Beracats, I've alway received more on my RS radios then with my Bearcats.

Better yet of course is to get an AR-8000 or a Icom R-7000 or 7100 if you really want a radio that performs.

Bearcats have always scanned faster than the rest but fast scaning isn,t real useful when you lock up on images and adjacent channels all the time. You spend more time hitting scan then listening to real radio signals. The newest Unidens of the last year have suppossed to have improved intermod operation.

Peter Neidhardt (petern@terraport.net) penned:
: I own a cheap General Electric boombox (about a $100 in value) that is a
: few years old. It works well but when I am on a certain FM channel
: listening to my favourite station, I intermittenly pickup actual radio
: transmissions from overhead commercial airliners. These are actual
: commercial airline communiques to the tower and back. I know it is
: because the pilot states the airline and other info. like heading and
: other number jumbo stuff. This is a simple radio with no short wave or
: any extra bells or whistles and it works well except for the fact that
: every so often it interupts the music and I hear aircraft communication
: messages. Does anyone have any idea what causes this? I thought
: Commerical Airline bands were totally different and not even close to the
: FM bands.

: Thanks greatly!
: Peter

Commercial airline freqs are right above the FM band. Your radio is receiving an image freq and detecting it even to it's AM and not FM. The airplane is probably really close, maybe overhead.

Image freqs work something like this. The IF of the radio is 10.7 MHz, but let's just use 10 MHz. The radio station is at 100 MHz. The IF is 10, so the local oscillator is at 110 MHz. The receiver can receive at both the sum and difference of the two, so it can receive at either 100 MHz or 120 MHz. The 120 MHz is (somewhat) tuned out by the receiver's tuned circuits leaving the 100 MHz. But sometimnes the receiver doesn't do the tuning too well. And sometimes the unwanted transmitter is real close, so it gets thru anyway.

If youre using the built-in rabbit ears, make sure they are fully extended. If you are always in a certain area, the location may be affecting the reception of your fav FM station, so try to maximize the signal by changing the location. You could also try reducing the signal strength by putting the antenna in the collapsed position. Maybe one of these might help enough to eliminate your problem.

Another boombox might help, too. I bought some cheap soundesign radio in a bargain pack along with a flashlight and some batteries. I liked it because it received both FM and TV. But the receiver is atrocious, and receives all sorts of images of who knows what. It really sucks, but what can one expect when buying a radio and flashlight with batteries for twenty bucks? Not much, I guess. The Renewal batteries suck, too. They try to nail you later for the cost of the recharger! Forget it.

What you are hearing is on the image frequency. Your superhetrodyne receiver has an oscillator 10.7 MHz above the receive frequency. The radio also picks up signals that are 10.7 above the oscillator. or 21.4 MHz above the intended FM frequency. Aircraft operate in the 118 to 136 MHz range.

Message-ID: <4iecqp$r4s@dfw-ixnews5.ix.netcom.com>
Source record: 238368

Hypothetically speaking, let's say you have a new PRO-51 where the test mode (2,9,L-Out) cell mod didn't work. Is there still a way to modify the scanner so that it can pick up cell frequencies, or did Uniden completely do away with this capability?

Thanks in advance for your responses.

> Ralph@TeamInfinity.com

The sketch looks just like the "Scantenna" a commercial product that
does work wonderfully. They advertise in PopComm every month. The unit

is housed in a plastic case. It would probably cost you nearly as much to build one considering the complexity of the gearing for the tuning device. I've had mine for many years and am using it currenty with a GE Superradio III. Probably the most inexpensive combo around for AM DXing. The SRIII is going for around $40 in the Baltimore area and the Scantenna around $30 (Mail order only)

By the way if you live in the Baltimore area listen to High tech talk on WCBM 680 on Saturday afternoons starting at 2 pm, theres a store near BWI that advertises on the show that has a similar antenna to the Scantenna available at their store that has a no questions asked moneyback guarantee

>scanner, and that is the whole point; what, you think they WANT you to
>hear when people get a ticket? :)

>JunKie <seizure@fdt.net>

The term VDT is an antiquated one, meaning Video Display Terminal, MDT is used much more prevalently.

Aside from prodviding VIN, OLN, and registration information through a nationwide service called NLETS (National Law Enforcement Teletype System), MDTs can also query the above items, as well as serial numbers, names, etc for want/warrants/stolen items through NCIC (National Crime Information Center). With some systems III (Interstate Identification Index) criminal histories can even be accessed from an MDT.

MDTs are also commonly used for dispatching calls, and car-to-car communications, often replacing any voice dispatching. Some systems allow officers to complete reports in the vehicle and transmit them to the station. Some access local databases to flag 'trouble' addresses during dispatch.

MDTs used by Fire/EMS services can flag addresses for potential haz-mat situations, or certain medical directions.

Unfortunately, MDTs are digital communication, and as technology progresses, higher speeds and encryption makes it difficult to decode transmissions. Also, they can operate on differenct freqencies in different locations; there is no 'common' MDT freq.

Hope this helps.

Channel 9 is used by marinas & yacht clubs for communication with pleasure craft. Channel 13 is used for bridge-to-bridge communication and collision control. Channel 16 is used by all vessels in distress, and as a 'calling' channel to make initial contact between vessels. When contact is established, traffic shifts to another channel.

Channel 17 is used by state & local governments for purposes such as harbor control and policing. Channels 24-28 and 84-87 are used by marine radiotelephone stations; usually powerful repeaters located along American rivers & coastlines. 'Noncommercial' channels are used for intership communication by pleasure craft and public fishing tour boats.

Also make note that the Maritime Administration in Los Angeles and San Diego uses 166.1500 MHz as their primary channel and 169.0750 MHz as their secondary channel.

Hope this helps.

I have the same freq counter and it is pretty much worthless unless
you're using it out in the boonies or using narrow band pass filters.
I use it to determine the freq of an unknown unit.

You are receiving civilian air comms on the image frequency of your FM RX. The civ air band is 108-136 MHz. Your FM RX tunes 88-108 and probably uses a LO at (88->108)+ 10.7 MHz to convert down to an IF at approximately 10.7 MHz. This means that strong air signals at approximately 2*10.7=21.4 MHz above the tuned FM band frequency will come in. Your radio is an FM RX, the air comms are AM, so audio may be distorted or noisy. Example...if a local tower uses say 120.1 MHz, you might hear it at about 98.7.

ok, heres the story,
A friend and i built the "FM-25" yesterday. We turned it on and nothing.. So we looked at the troubleshooting guide, "check all the capacatators for correct poplaraty" so well what do you know i fucked up on C4. So i re did c4 which is a 10uF ec. tried it again, it worked! After a little while of use (1 hour) is just stoped. no nothing, just static. I was prety MAD. So i took a lot at the PCB, it looked fine, no bridges or anything. My friend lookd at it and held it in her hand.. It suddnelt worked again. After this i set it up again to play some music from my walkman while listinging from my stero system in my room. after the fm-25 stoped working again is was ovious something is really fucked up with it.. but it was geting late and she had to go home. So today i was resoddering all the parts to see if i could fix the problem...
It works again. Ok this is good, then it fucked up again! Dam i was pissed. so i started touching the underside of the PCB, where all the soddering connections are. it still wasnet working. Even though the light for "freqency LOCK" was on the transmiter wan't working. before the led would just be off.

i also have this problem geting stero on the fm-25 before the unit completly broke. any ideas?

Well im having trouble , should i send it in to be repaired for $36? Or just send in the BA1404 and the program IC's to see if there fucked up? i dono. well if you have any suggestions please e-mail me at critta66@shadow.net.

Thanx in advance

PS i can be reached on IRC (undernet) on #god or #troy

5299. FT: 200/205XLT for PRO-60/26

Newsgroup: rec.radio.scanner

Anyone interested in trading a PRO-60 (or perhaps a PRO-26) for a Uniden Bearcat BC-200/205XLT plus some cash? The 200/205XLT has full 800 mhz coverage enabled.

Here's the band plan for the 205XLT:

Mhz Range	Description
29.0-29.7	10 meter "Ham"
29.7-50.0	Low band
50.0-54.0	6 meter "Ham"
118-136	Aircraft (AM)
136-144	Military Land Mobile
144-148	2 meter "Ham"
148-174	High Band
406-420	Federal Government
420-450	70 cm "Ham"
450-470	UHF
470-512	"T"
800-956	800 mhz

200 channels in 10 twenty channel banks
10 priority channels
15 channels per second
liquid crystal display
0.4 microvolt sensitivity @ 29-54 & 136-174; 0.8 @ 406-512; 1.0 @ 800-956
-55 db @ +/- 25 khz selectivity
400mw audio output
earphone jack
slide-on nicad battery pack with external 12 vdc external connector
12 vdc external power supply
rubber ducky (BNC) antenna
heavy duty pseudo-leather carrying case with belt hoop

Interested parties please reply via e-mail to moujesky@why.net.

Thanks.

5300. BC200XLT Cell mod and 1147A chip

Source record: 238315

There are several possibilites here. Some scanners have a recorder output. On some, you have only an earphone output. Almost none of the scanners have a recorder on/off control. This last point will probably cause you the most headache.
Between, the radio and the recorder you may need some type of level control. I prefer this to be connected thru an audio filter of some kind. (assuming voice data, you should be 'looking' at the range 500 to 5000 hertz approximatelyl). There are several possibilities here, from home brew, to using "both" sides of a graphic equalizer (increased rejection of unwanted signal), to a device sold by Grove electronics. Grove's even has Tape controller output, audio amplifier and a speaker. These were pretty expensive(but cheaper than others), but I believe they're on sale now. (Grove 704-837-9200)
The simplest method I've heard of is an attenuated cable, (R.S has one) to attach your scanner to a VOX controlled tape recorder.

cheers

P.S. Don't forget its illegal to repeat what you here to others. I'm pretty sure this applies to recordings too.

5303. Re: Why Modify for Cellular

Newsgroup: rec.radio.scanner

Message-ID: <4iio6s$jfh@newsbf02.news.aol.com>
Source record: 238316

First of all, not all scanners have this imaging 'problem' . At least its not always something usable.
However, you're only getting 25 of the 700 or so frequencies. It's approximately from 870 to 890 MHz at 30khz spacing. So you're getting only about 4% of whats needed to cover the range. For casual fun stuff I, guess its ok. But anyone considering 'serious' work needs it all.
Ofcourse, who would wait maybe days, to hear that one pimp, prostitue, car thief, drug dealer, or counterfeiter out of hundreds of boring conversations? Not me:)

Source record: 238322

Scan from 360 to 385 mhz to monitor cellular frequencies. Make sure you are in NFM mode and your step rate is 5 khz's. Now you are scanning at close to 300 channels per second ! This does not seem to be an image frequency but appears to be a software glitch in the 9000. The tests I have done with a dicone antenna at 70 ft and a 20 db pre amp show that the signal strength between an un-blocked R7100, PRO 2006 and the BC 9000 receiving at 360-385 NFM are similar. The BC9000 will receive all the local Cell sites very well even with the basic antenna that came with the radio and appears to pick up 90 % of what the other radio's will receive on distant cell sites.
If you want to test this "modification" do so on a weekday during normal business hours. Cellular activity greatly decreases after 8 pm and during the weekend.

Good Scanning !

Gary Wilburn

> Here is a list of the cordless freq's I have.

Unfortunately, the list includes an error in the Ch 5 handset frequency. The original FCC announcement contained a typo. Police Call copied this, adding a further error. This has since been propagated on BBSs and the Net, with a variety of additional mistakes. I sometimes think the (Mis-)Information Highway is being built to prove the truth of Gresham's Law.

Yes, I have worked for RS (as sales AND Mmanagement), and I have to agree, most of the salespeople and management at the Shack don't have a clue about what they're selling or what it does. They know about as much about a product as you can get from the catalog, or less, since most of the employees don't read all the fine print in the catalogs.

RS has a couple of things holding them back from EVER living up to their slogan:

-They have virtually NO training for any of their employees. Maybe this has changed somewhat since I left, but from what I have seen talking to the local RSers, I doubt it. Until I was in management I never attended any training at all, and as management it consisted of a once a year two-day meeting concerning the new catalog. Rank and file employees see a few company newsletters (if their manager gives them to them) regarding products, recalls, etc.

-Most Store Managers really want to help the customers, but except for their particular are of interest, all they know about the products is FROM the customers. I leared alot about stereros and such from my audiophile customers, because I knew little about them myself.

-There is little incentive for the salespeople to learn, and for the managers to teach. When I was in sales and even up to being an assistant manager I was paid minimum wage or a small commission on what I sold, whichever was higher (and sometimes, minimum wage was better). The commision was lowered at christmas (so we wouldn't all get rich <ha!>), and varied from 4.5 to 6.5 percent of sales. Not alot of money if you know that RS prided itself on making at least 40% on everything it sold. That might have changed now that they are selling other companies' products, but the mark-up on some of their brands was outrageous. However, based on these numbers, it was worthless for me to invest much time in any employees because they would leave as soon as they could. I had some great people from a local college (FIU) who would work their to get a discount on the parts they bought for electronic courses and such, and I was always really liberal with sale prices, damaged goods, etc. but they would soon leave.

-Management at the store level is not paid much better. The best and the brightest soon leave, what with the low pay, long hours, and inventory every two months. You are constantly under pressure to sell, sell, sell, no matter what junk is distributed to your store (like the pathetic Xmas toys). Virtually every member of management I knew at RS had lots of the RS merchandise at home.... undocumented compensation of a sort, since they got paid beans.

-RS executive management is so lost as to be pathetic. They are not cutting edge electronic buffs, they are just old businessmen living in the days when we all drove Chysler Imperials. They have stumbled into a few hot areas (TRS-80 Model I), but strictly by chance. Go back and look at how much of the PC market they have given up in 10 years. They used to control 40% (mid '80's), but now they aren't even a blip on a pie chart.

Just my HO, but I bet there are ALOT of former RS managers out there with similar stories. Why don;t we all post them and see how long it is before Mr. Roache (CEO of RS) responds. He probably has heard about the internet, don't you think? Might even have some one on his staff with a dial-up account....

I just want to start off by saying that I am not an electronics expert. I took a shot in the dark and it payed off. I have the uc1147a chip in my bc200xlt. Directly above the letters en of uniden, I cut the piece in half. It's a little silver piece with a few numbers on it. It's the only piece between the chip and a phillips screw, the left of this piece is connected to the 11th lead from the left on the top of the chip. Any questions just email me. Again this may not be the correct mod, but it worked for me. James.

Posting an asking price of $125-$150 higher than the going rate is not
going to captivate too many prospective buyers. Durham still has them for
$379 (new).

That's fine for double conversion receivers, but not so great for my triple conversion. The other thing being that above 894 MHz most scanners search in 12.5 kHz steps, while between 869 and 894 MHz they search in 30kHz steps. For me listening to the image frequency is like watching a 9 inch black and white TV.

I apologize for using this bandwidth but I have to state my position.
It is the sellers right to put whatever price he wants on his stuff.
If you believe that price is too high then don't buy it. This post
would have been gone if the price police hadn't flamed it several
times. I am tired of seeing post after post return to the newsgroups
because someone had a comment about the price of an item. Please let
the seller set his price and the market (buyers) determine if it's a
good one or not..

By the way I have a new in the box, never used 2006 which is a special
value. Due to it's rarity I will sell it for $895.00. Yes thats right
$895.00 american cash. Whats so special about this unit? This was
the only pro-2006 sold in the Tampa Bay area on april 18, 1995. Be
the only one to posess such a rare unit. Send cash now...

Again sorry for the bandwidth but I had to express a point.
Best to all. mike

=====
No, it doesn't scan at all. What it does is use a discriminator circuit to determine if any one signal is sticking up above the noise floor of all received signals. If there is one such signal, then it locks on that signal, and displays the frequency of that signal. Obviously, for this to happen, the signal must be relatively stronger than all other signals. This means the Scout (like all frequency counters) operates on what are called 'near field' signals. IOW, the transmitter must be close to the Scout (the weaker the transmitted signal, the closer the transmitting antenna must be; for something like a cordless phone, mere inches, and few of them).
Frequency counters are not magical tools that will just snatch a signal out of the air, and identify it for you. You really have to have the transmitter nailed down before it will work. For example, let's take a Security Officer in a shopping mall. In order for you to determine what frequency he's using, you have to be <close>, and he has to be transmitting. How close? Depends on several factors; the transmittor's power, and the relative floor of the rest of the spectrum. In an urban area, that floor will be pretty high, and if the transmitted signal is low, say 1 watt or so, we are talking inches, maybe a foot. As power goes up and the floor goes down, the distance grows. Here in, say Arrowhead Mall in the Phoenix area, several feet works. In Metro-Center, closer to the center of town, that distance drops a lot. SOmetimes, you have to maneuver the person with the radio to transmit. Ask for help with your new toy, for example. Or, if you are the adventuresome type, pick a fight with the security person; this will usually get them transmitting! ;-)

5330. Really remote control

Newsgroup: rec.radio.scanner
Date: 1996-03-18 00:00:00 UTC
From: bote@access2.digex.net
Message-ID: <4ikp9n$kma@access2.digex.net>
Source record: 238393

I tried to connect my PRO-2006 with Opto456 remote control unit to my computer via about 100 feet of 25-pair telephone cable. I knew it would be a dice roll at best, so I wasn't surprised when the thing didn't work.

Now my question is: how do I do this? I suppose that I could put another computer right next to the scanner just to have all the neat features of computer control, but I really wanted to be able to control the thing from my office at the other end of the house. Running down the hall to push "MANUAL" doesn't get it.

Would it be worth setting up a LAN between the two machines to allow for some kind of remote console operation?

Any ideas?

==========
Good question...
First, using images to hear cellular phones will not get you the entire cellular band, as you have found.
Second, not all scanners do this. On double conversion scanners, it depends on whether the conversion scheme is up- or down-conversion. Triple conversion scanners (as a rule) simply don't get the images.
But, why listen to cellular? A few reasons, I guess. It's illegal, and therefore forbidden fruit; all the sweeter, and all that. It's also quite interesting at times. While it's mostly boring stuff (especially during normal work hours), it can be extremely interesting. It's a slice of real life, with everything that a slice of anything provides: a cross-section, a little of everything. People will talk about almost anything on a telephone; work, vacation plans, their spouses, their money, their hopes, their failures, the failures of others, their sexual exploits, their dates, their Christmas presents, everything.
It's illegal to listen here in the States, of course. It's also impossible to tell if you are listening, unless you spread the word around. Despite the law, cell phone conversations are *not* private (you would have more expectation of privacy speaking on a crowded street corner). So don't tell.
Hope this helps.

The Scout listens to all the rf in the area. When it finds a signal
significantly stronger than the surrounding rf, it locks onto that
frequency and can display and store it to memory. With reactive
tuning, the Scout connects to your scanner and tunes the scanner to
the frequency it just found. Neat, huh?

From: pkelly5637@aol.com
Message-ID: <4iklkm$5us@newsbf02.news.aol.com>
Source record: 238404

If there are any seriuos railfans out there, I would be very interested in experiences you have had with scanning radios for this band 160-161 mhz both as a base and/or mobile trackside application. I experience serious interference and intermod problems scanning the railroads in my car with a Pro 43 with a 2 meter mag mount antenna. I have tried numerous antenna combinations from all band (terrible, pulls in all kinds of noise) to just using the duckie (cuts down on range). What I want is a scannable radio (it doesn't have to be a scanner) that has good range and protection from interference (like the Pro 2006 with the Grove mobile mount, missed the boat on that one!) I'm leaning toward a professional Motorola two way radio designed for the rail band (programmed for recieve only) but am looking for other ideas before committing (or should that be "being committed") to a specialized scannable radio in the $400 range just for railfanning. Pleae post oe e mail.

Thanks kindly

When it comes to law, all interpretation outside of a judgement in
a court of law is irrelevant.
Unfortunatly, it makes it hard to know what exactly is "against the law"
before it happens.
Legal advice based on other trials can be relevant as this was
interpretation in a court of law.
So when it comes to interpretation of laws like this, be aware of
what the law says but also of prior litigation.

I generally reserve my amorous rutting for animate female humans, so I'm stumped on this one. Maybe if you clean up all the sticky stuff you squirted into your device at the culmination of your passionate throes it would work. I've never seen an FM-25, so I don't know if the designers made arrangements for cleaning after use, although surly they must have foreseen such an occurance. Maybe next time, you should wear a condom....

I think there is some fascination with getting a "moddable" scanner just for the thrill of doing so. I think people want cell more because it is "forbidden" than because it is interesting.

Also, the sensitivity is better when you receive cellular directly rather than an image. With your image reception, probably what you are getting is only the cell site closest to your home. If you live near one (most people in big cities live near at least one), it's signal will be quite strong and even with image reception you will get it clearly.

There are, I believe over 800 cellular channels, you would probably recieve a lot more of them than the 25 used by your local cell site if you could tune the cell freqs directly. Why you'd want to is another matter.

Well, although this thread seems just a little pointless (personal opinions about an entire chain based on a few local experiences seem silly, and holding local store owners responsible for their franchises national market campaign, well, hmmm....), I feel I must throw in my own recent experience with my Radio Shack.

I purchased a Pro-51 (my first scanner!) this past weekend and the salesperson was _very_ helpful. He answered all of my questions about the different models and their capabilities (I am a professional engineer and like to think my questions weren't all *that* simple or naive) and then he even steered me towards the "old" Pro-51 with some innocuous statement like "Of course, I can't tell you whether this one can be made to receive cellular". I could practically hear the "wink, wink, nudge, nudge, say no more". I'm quite pleased with my purchase and I'm glad that I received the help that I did.

Anyhow, my point is that they're all different and to flame on about what a lousy chain it is and how it doesn't deserve to be patronized is ridiculous. Myself, I'll shop where I feel respected, where I feel like I'm getting a good deal and where I'm pretty sure I'll find what I'm looking for. And if the saleman's an asshole I'll go find somewhere else. God knows, Radio Shacks are about as common as 7-11's -- it's not much of a drive to just go find another one or another chain/store altogether.

Of course, I *could* tell about that asshold at a Radio Shack in Texas who couldn't figure out how to sell me grille cloth for my speakers ;-)

Oh, anyone know of a hardware mod for the Pro-51 so I can actually key in cellular frequencies? The test-mode memory thing works great but I'd love to be able to program a limit search in instead.

- John Stephen

It's difficult to keep one's composure after reading this
disinformation. :-(

>I've heard that the 8500 has had quality control problems in
>the past, any truth to that rumour?
>Cheers, Ron Cain

The discontinued BC8500XLT had performance problems, including
audio hiss and annoying squelch tail. Forget about
the BC8500XLT and get a BC9000XLT which is more flexible and a
much better performer. For starters, the modes are selectable
on BC9000XLT and fixed on the BC8500XLT.

I tested a BC9000XLT for MT and was so impressed that I
bought two other CTCSS-equipped BC9000XLTs. They are
the best base scanners of the current model crop.

PS - See my BC9000XLT review in March 1995 Monitoring Times.
Reprints of articles from Monitoring Times are available

Reallly important and it DOES eliminate a lot of the interference. But not all kinds of interference problems. Here in Baltimore, I have a Pro 43 and Pro 2006's and I still get a bit of intermod and interference in the urban environment in base and mobile scanning applications with outdoor antennas. A lot of myt scanning is in the marine and rail band in the 150-160 mhz range and the problem can be really severe...so much so that with some scanners monitoring this area is almost impossible. I personally feel that buying a scanner without triple conversion is a waste of time and money.

^^^^^^^^^^^^^^^^^^^^^^^snip -to-fit^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

Paul,

The aircraft band is right next door to broadcast fm music band. ADD your fm receiver's 'IF'- frequency (some times 20.x MHz or 10.xMHz) and with a strong enough signal from a aircraft right overhead, you may get a "mix".

Your aircraft can 'mix' with your desired station +'IF' and there you have it. Often even more magic is involved... where two signals transmitt at the same time and mix down to your fm receiver. Infact there is a very obscure program (no I don't have it) that calculates where the offending signals are and next is to build a filter to trap out at least one of the offenders.

The cure? Add a external FM Antenna... the better fm antennas look much like a TV Antenna, except the elements are almost all the same length... Use 300 ohm 'twin-line' to feed the signal to the set. Twist the twin-line as it passes from antenna, all the way to the set.

What? No screw terminals for the two wires? Then try a random 'long wire' antenna with a alligator clip on the business end and clip it to your whip antenna! You may need to move the long wire around till you find the best signal. This should provide a stronger signal from you FM station and hopefully swamp the front-end with 'desired' signal.

Weinguard makes a FM PASS filter (75 ohm coax 'f' fittings)... this signal loves the FM Brodcast band and tries it's best to reject other signals above and below the band. Cost, about $12, retail. I can't vouch for the quality of a Radio Shack equiv. More elabroate 'tunable' 'notch' filters can be had, but for lot's more money for one of quality.

Hope this helps!

Tony

> 1) What is the highest frequency it will pick up?

25 to 520 MHz, 760 (or so) to 1300 MHz. After cellular mod, of course. :)

> 2) Does it have wide-band FM?

AM, FM, and Wide-Band FM ... Yes.

> 3) How many banks/channels?

400 channels, 10 banks. 40 channels per bank.

> 4) Does Rat Shack still repair broken ones easily?

Probably, but I've heard that if you take a scanner to them (which is
moddable for cellular or already HAS been modified), that they will
"doctor" them so that you can't modify the scanner ... Maybe someone
out there can confirm this?

brian.petersen@604.sasbbs.com

Huh? The RS guy told me superglue would work fine, hot melt if you have it.
Do I have to go out and buy solder now? Will solder work in a hot melt gun?
I heard acid core is best for electrical work.

>cheply@coastnet.com

Just leave them as is maybe..tv antennas are broadbanded and may
include the low chs 54 to 88 and then 174 to 220,so don't really worry
about it,u should use cable tv coax though and maybe a inline amp to
help out,u could trim the shortest elements on the end to about 20
inches on each side of center,,cya..VE1ELK

scanner so
> that it can pick up cell frequencies, or did Uniden completely do away with
this
> capability?
>
> Thanks in advance for your responses.
\\
I have a PRO-51 with a date code of 7A4. This seems to be the LAST
date coded model that can take the keyboard mod as I have tried it on
later models with NO success.

Try this: (1) First try hold LOCK-OUT, 2 and 9 keys down while turning on
power. Test frequencies should be loaded into the first 25 channels (maybe) .
If channel 23 contains a magic frequency (888.96MHz) then you can direct
search .
****
(2) IF that does NOT work (THIS WILL !!!!!) hold down BAND, 2 and 9 down
while
turning ON power. Now, in the digit test mode, all digits of the LCD will
move slowly
from the left to the right of the display.

(3) When the movement advances nearly to the right end of the display, press
and hold
the LOCK-OUT, 2 and 9 keys until the digit test mode stops...
The display will blink, **NOW** the radio will begin scanning the
factory-preset frequencies.
Manually step to channel 23, which will display 888.960 MHz, roughly the
middle ofthe
cellular band. Start a normal, direct search routine from this frequency to
cover thecellular
freq's.

(NOTE) This will wipe out all stored frequencies. You will want to keep CH #
23 open ,so
you can do your searches up or down from 888.960. Once you search higher than
896.000,
or lower than 869.000 , you will need to manually step to CH # 23 again.
(once yousearch
past those ranges you need to go back to the middle by going to ch. 23)

After you get the mod complete it is safe to program the scanner back to
wherever you had

it, just keep ch. 23 open for cell.

Hope this was not too confusing. HAPPY SCANNING!! |-))))))))))
{for more info, see Monitoring Times Dec. 1994 Pg.112}

(NOTE) This will wipe out all stored frequencies

/rant_on/

The law states that you may monitor but not profit by your monitoring (public service my butt, to cut off that lame excuse). There is no exception for journalists. All you news organizations that use scanners are breaking the law, pure and simple.

You can go to your local law enforcement and beg them to program the codes into your radios, but then you are obligated to them and must live in fear that if you print anything negative they will take away your codes.

If all youse weren't so lazy and your management toeing the bottom line like they're waiting for the 2ndcoming dividend, you'd get off your duff and actually send a reporter out to cover stories. I realize this is a 'retro' concept (in this age where even the obit writer's title starts with 'Editor') that hasn't been used since the 30's and will seem extremely radical to you, but it would provide better results than sitting by a scanner and waiting for the telephone to ring with whatever propaganda your 'sources' want you to print. Try it sometime.

Bottom line: it's illegal and I resent you getting away with it because law enforcement thinks they can override federal law and promote it on the chance of getting their names on the news.

Hi all:

I'm a SW newbie and have found this entire thread highly instructive. But like any good student after a professor's lecture I have a question. Why do FM radios use this "image frequency?" Why not use circuitry that tunes directly into the desired frequency? In other words, what's the image frequency used for and why?

Many thanks,

J. Guy Stalnaker

Help, my fingers are getting shorter...

As a newbie , I'm interested how to scan through a
certain freq.band to look for interesting stuff.
I own a Palcom Black Jaguar bj200mkII (16 chan.).

When I want to monitor something interesting, I'll have to punch in the freq.
manually (to a total nr. of 16 channels) , but what is the work-around when I
want to scan a certain freq.BAND?? Do I have to buy a (decent) new scanner
that can do the job, or is there an alternative?
For example, is it possible to link my scanner to my PC? (why not).
Or do I have to program all 16 channels in steps of say,5Khz and step through
the band with 80Khz-steps?

Help my fingers please?

#god + #troy .. now hear this!

A completely different approach might have got you oodles of help!
When the situation demands it, I can also blister the air blue. It helps alleviate the pain and frustration and/or is excused because it was delivered with such wit and good nature as to be forgiveable.

What you do appears to be to seek attention (pathetic!), or to troll for flames (this time you got some!). My kids read my screen too, and I resent having to explain to them that the foul-mouthed norms you have adopted are characteristic on any channel that has a wide audience, and are unrepresentative of the rest of us. (eg. - repeater usage).

Jeez - I don't even know what "undernet" is... maybe it's time to do a little slumming!

73's ??? naah, the concept is wasted on you.
88's as appropriate ??? OK - I gotta place (I'll show you where!)

Hi,

As a newbie to scanners: what is the work-around when you're
not able to scan through a pre-define freq.area ? Buy a new scanner
that can? I own a Palcom Black-Jaguar BJ200MK-II, and I'm only able to
listen to manually programmed freq's, which means you'll have to know the freq.

However, my main question is: Are any mod's known to this scanner?

Thanks in advance!

I can't imagine what your problem is except the antenna you are using
sounds a bit low-band. I use a cheap all-band mag-mount from RS and
receive every transmission with no problem using a cheap BC 550. I D/L
the freqs in my area from the internet.

Source record: 238207

I know first hand about the EEB shortage. I have had one on backorder for almost a month now. I have heard that the company that makes the AR8000 has tooled up to produce the new Ar5000. By the way I cancelled another order from EEB for two antennas. (one mobile and one duck) That were also on backorder for almost a month. It also took them almost two months to do a repair and a Mod and they screwed up and never did the mod. I would check other sources before getting on their waiting list.

That tower hosts WNVC/WNVT TV channel 56, along with some commercial
two-way services.

The best solution to your reception problems is to move. :(

Failing that, you could put some attenuation in line or
get a receiver with better front-end design.

Of course, there is no shortage of R.F. in the vicinity,
whether it is 105.9 off of Shreve Rd. and Buckelew Dr.
or WAVA at Lee Hiway and George Mason Dr., or the
plethora of stuff at Tyson's Corner, etc.

Whoa guys!

We all agree that it is an image. That's a given!

But putting a bigger antenna on it won't help! If you were standing next to a jet engine, would you cup your ears to hear it better? Or would you cover your ears?

If it *is* causing non-linearities in the front-end, overloading it even more is not going to help (why do you think they put the -20dB switch on good receivers?).

Try *collapsing* the antenna, or move it around. I know it sounds strange, but it does work. I lived directly under the path of SFO's main runway for 20 years and I have experienced almost every type of interference from airplanes. Cheap radios always received them. With high quality receivers, you usually would hear a slight drop in audio level. Like the noise, you just have to live with it. Cheap RFI filters simply don't work.

The tuners front end contains the resonant circuit which is supposed to favor the intended signal (101.7) and reject the un-intended ones (123.1). In cheap radios, this circuit is not very good, so the rejection (selectivity) goes to pieces. The quality of the IF stages also has a lot to do with it.

If the radio has a image rejection of 20dB, that means that the airplane signal has to be at least 100 times more powerful than the FM station to "break through". Easy to do when the airplane is right above your head and the FM station is 10 miles away! Capture ratio sez it only takes a dB or two to override the intended signal. And it does it!

Your best bet is to try another radio. Some *are* better than others.

On Mon, 18 Mar 1996 11:06:42 -0600,
in newsgroup rec.radio.scanner,
Isaac Kohn <ikohn@vertex.ucls.uchicago.edu>
from Ripco Communications, Inc. thoughtfully posted:

>There is a small, minor detail: Air transmissions were AM, last time I
> checked!

They still are!

>How does an FM receiver with poor-selectivity receive AM
> transmissions???

FM detectors are capable of detecting AM signals through "Slope Detection". In a nutshell: If you tune a FM detector off to one side, you can detect AM. When a FM detector is tuned "dead-on", it will have the most AM rejection. When it is tuned off resonance, to where the signal is now riding up-and-down on the steeper outer slopes of the detector curve, you create an AM detector (the detector curve is "bell" shaped) Some cheap one IC AM/FM radios use the same detector for both AM & FM, utilizing slope detection (Note that you have to disable any AFT circuits, as they will attempt to follow the signal and keep it centered).

Absolutely, consistantly ranked at the top in sales performance of
major companies in the information systems field. Why, because I
listen to the customer and treat them honestly and ethically.
Something RS needs to teach to its clerks.

Tandy
>Corporation, exists for two reasons--to make money, and to have
some
>sort of positive impact on the communities in which it conducts
>business. To Tandy's credit, it does an enviably fabulous job at
both.

I disagree. Yes a corporation HAS to make money. But companies
that focus on the bottom line and not on the customer never fully
produce up to their capabilities. Look at some very successful
companies. They usually have a mission statement. The most
successful companies mission statements start out talking about the
customer, THEN further down you'll see statements about stockholder
value and profitability. The latter cannot occur unless you serve

the needs of your customer.

To your other point, RS has very little involvement in communities. They turn over their people too often and executive management is just not interested.

>Now that bad part.... When a company is as large as Tandy, it's

within,

There is the problem, unless you pay people a decent income, you are not going to get good people. For $35k a year, a manager usually works over 60 hours a week. The "good" managers are few and far between. As far a promotion from within, that is why they continue to keep the same anti-consumer practices in place. There is never any new blood or fresh ideas from the outside.

>meaning, we all started as salespeople.

>very much unlike yourselves. If you have a problem with a
particular

Tell you what, when RS stops dehumanizing its customers, then the customers will stop dehumanizing the RS employees. You reap what you sow.

>
What, are you majoring in police science or something? BTW, did I miss some-
thing? I attended Cal State Fullerton, and I lived in California until two
years ago. I believe the "local" maximum speed limit is 55 mph not 65 mph.
Surface streets are usually below 50mph. Oh and BTW, alcohol related auto-
mobile accidents out number speed related accidents almost four to one.

I've listened to most of the Police freqs. in OC, LA and SD counties. Most
of the "speeding" calls I heard were from high speed chases involving fleeing
suspects.

I'd rather drive with speeding Californian drivers than with the best drivers
any where else in the U.S.

Internally the AR1500EX was a "different" radio to the AR1500 & AR1500E
with something like 10-15 changes from the previous versions and had/has
different PCB's.

Externally they were all the same. The "EX" carried a small sticker,
both on the box and just above the LCD, these maynot have been applied
to those in the USA though as "technically" the "EX" was different
radio. If there is no sticker then the quickiest and only real visual
check is to look at the battery connector that plugs onto the PCB. If
this is 3 pin then its probably an "EX" as I think all the earlier ones
had 2 pins.

: I have heard the terms "Long Wave", "Medium Wave", and "Short Wave" bands used
: for a long time, but never thought of asking what the frequency ranges are for
: each of these "bands"? So, here I am. Does anyone know what they are? :)

The official defined regions are:

VLF 30-300 kHz ?
LF 300-3000 kHZ ?
HF 3-30 MHz
VHF 30-300 MHz
UHF 300-3000 MHz

Medium is generally taken to mean the standard AM broadcasting band,
540 - 1600 (now 1800) kHz, and short wave usually means everything
between the top of thr AM bcst band and 30 MHz.

Marty,

FYI: Tried it on my PRO-51, coded 10A5 (October 1995) and the mod you describe does not work. Whetever they did at Uniden, they got it right, or wrong to some ;)

I once saw a post that mentioned that Uniden/RS basically did whatever they did to the PRO-43 or PRO-49 - I believe it was the addition of a wire or something, to the newer PRO-51's. The poster surmised that if you apply well-known PRO-43 or -49 mod to the -51, that it would then be able to receive cellular. Anyone remeber this or see this post? Anyone try it on their PRO-51?

Close but not quite there yet, at least for the United States.

Cordless phones are PRESENTLY sold here with 10 or 25 frequencies. Broadcast ranges are from 46.6000 to 46.9900 and from 49.6700 to 49.9900 for your basic low power jobs. More expensive and obviously better phones can be had which use the 900mhz range. I think I'll sweep around up there tonight to get the actual freqs. The 30mhz range is no longer used by present day cordless phone manufactures, (it's too noisy down there). You will also find baby monitors and kids walkie-talkies in the 49.6700 to 49.9900 range. It's really amazing how far 20mw will transmit from those things!

This all will eventually become a mute issue as many cordless phones are now scrambled, rendering the transmission virtually garbled beyond all repair. I have one of these and I've verified it's Motorola secure-clear feature.

BTW, I've read a couple of times in this thread that several people can not pick up cordless phones from more than 1500'. I'm not sure why you're having

this problem. With a quality scanner you should be able to pick them up several miles away. I do all the time. Perhaps your antenna is not properly matched for the freqs. you're scanning. It also depends on the terrain as the transmission on these little buggers is line of sight.

Have fun and happy scanning.

5416. Optoelectronics announces the Optolinx

Newsgroup: rec.radio.scanner
Date: 1996-03-19 00:00:00 UTC
From: opto@igc.net
Message-ID: <4imic4$38@IRIS.igc.net>
Source record: 238266
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Optoelectronics announces the release of the new OPTOLINX PC-Radio universal interface. The OPTOLINX is the replacement for the popular CX12AR. The OPTOLINX adapts a wide variety of Radios, Scanners, Decoders, Frequency Counters, Frequency Recorders, GPS receivers and other devices for connection to an RS-232C personal computer serial port.
The OPTOLINX incorporates special provisions for connecting the AR2700 and AR8000 to a PC for full featured computer control scanning, even allowing the user to control multiple radios at one time. Interface the AOR AR3000A receiver with the DC440 decoder and the OPTOLINX to allow for decoding of DCS, CTCSS, and DTMF.
The OPTOLINX can interface with an NMEA 0183 compatible GPS or LORAN receiver. Use the OPTOLINX, GPS receiver and any communications receiver with a data port to receive Longitude and Latitude coordinates for any signal the receiver receives. * Future software by software developers will allow real-time position mapping.
The OPTOLINX will interface to the Scout Frequency Recorder for the downloading of Scout frequencies in memory. Also, use the M1 Frequency Counter with Optolog software for computer controlled datalogging of all frequencies the M1 captures.
Like the CX12AR, the OPTOLINX will also computer control the ICOM R7000, R7100, and R9000.

The retail price of the OPTOLINX is $129. The unit is currently shipping.
Call the Optoelectronics Toll Free Order Line now. 800-327-5912.
Don't miss out on the latest breakthrough from Optoelectronics.

5417. Fix cellular phone to scan? Program phone to duplex w/another phone to phone?

>wire? Well it is! I don't know why RS called it "LAN Cable", but the
>stuff comes as 25-conductor, shielded cable.
>
It's called LAN, (Local Area Network) cable because before ethernet and FDDI ATM and all the rest of these wonderful high speed LANS, there was serial port communications and yes, serial based LAN's. RS used to sell the model, TRS80-II and 16 systems which used serial for peripheral connections and limited client/server, (I use this term in it's purist form) communication.

I don't know why anyone would have a problem finding this stuff. Any electronics shop will have it if they stock computer parts. It would be called 25 cond. shielded cable or sometimes parallel cable as parallel ports use 25 line cables for bi-directional tri-state devices. I've bought thousands of feet of this stuff over the last few years to make both serial and parallel cables.

MARVAC's in Newport Beach, CA. will mail order the stuff, cheap. I don't have the number handy right now so call information.

>but only on SOME DAYS ... not every day (or rather, night) as with the AM
>broadcast band. Why is this?

>Please reply to: brian.petersen@604.sasbbs.com

>THANK YOU!

"Skip" to be put simply is a phenomena that bounces radio signals off
certain layers of the atmosphere. When and where depends on weather
conditions at both the receiving/transmitting sites among other
things. Drop by a local library & pick up almost any book on SW or
Ham
radio. They all usually have at least one chapter onj "skip". be
forwarned it can be a bit dry reading, pretty technical stuff though.
just my observations on skip
times:

LW: not effected -usually theses signals "bend" around the earth.

MW - nights best especially 1 hr before/after sunrise/sunset

SW - up to 8 mhz evenings
over 8 mhz daytimes

I'm sure thers have more accurate times for specific bands but these
are my general listening times.

What is in a name? When I hear "Radio Shack", it implies that there should be someone employed there who knows something about both consumer electronics and the electronics hobby. The term radio shack, I believe originated with amatuer radio operators and referred to an area where they had their equipment set up. If a corporation names itself after something as technical as a Ham operators *nest* so to speak, then they had better know something about what they are doing.

Folks, this is a typical RS employee response to anybody that used to work at RS and then tells how poorly the internal operation is run. Don't believe it. I quit RS after 5 year of employment with them because there is no real money in working there. It was just a part time job during school. However, I used to have to manage stores on a periodic basis during the summer months because they fired people right and left. There people were not all incompetent. I saw people that were salespeople for a month, then made managers and then fired all within a six month period. Who's fault is this "failure?" RS of course.

They way they calculate inventory is almost a for sure loss for the manager, both financially and from a "career" standpoint. They way they structure commissions and management compensation is almost like taking money out of the employees pocket. This guy that is pontificating about those that can't cut it will also be gone from RS is due time. We'll hear a different story then.

: AM) on a nearby FM reciever.

"AM rejection" is a spec which applies to FM radios. It is worse on
cheaper ones.

The circuitry used to detect FM signals can respond to changes in the
amplitude. Especially when the circuit is cheap, and under conditions
where it is overloaded.

wavslav@interpath.com wrote:
: Is it possible to make a cellular phone to scan it's freqs? I have
: heard of this but have not confirmed this. Anyone know how? or who I
: can contact who does.

Yes, it is. Lots of phones can be put into "test mode" where they can listen in on any frequency you want. No, I don't know how to do it, I've just heard it can be done.

: Q#2 I also heard it is possible to program two cell phones to work
: directly to each other (full duplex) Anybody?

No.

The reason is that the cell phone transmits on 824-849, and receives on 869-895. The transmit frequency is always the same delta, ~45Mhz, below the receive frequency. Left as an exercise to figure out why 2 phones cannot talk directly to each other.

Brett,
You mean the "Glasgow Coma Scale".
It is a way of grading the neurologic status of patients, esp. head injury and stroke patients in the field. It is based on scoring various neuro parameters such as degree of alertness, motor ability, response to pain etc. A point score for each is generated and the total added up. The best (a normal, walkie-talkie patient) is 15 and the worst (you don't want to know what they are like, but are usually moribund) is 3. This gives a rough guide to their survival.

The Glasgow trauma rating system is used by paramedics and ER staff to rate the injury severity of trauma patients. Named after Dr. Wiliam C. Glasgow, a US physician, 1845-1907.

5436. Optoelectronics announces the Optolinx

Newsgroup: rec.radio.scanner
Date: 1996-03-19 00:00:00 UTC
From: opto@igc.net
Message-ID: <4imikl$38@IRIS.igc.net>
Source record: 238286

Optoelectronics announces the release of the new OPTOLINX PC-Radio universal interface. The OPTOLINX is the replacement for the popular CX12AR. The OPTOLINX adapts a wide variety of Radios, Scanners, Decoders, Frequency Counters, Frequency Recorders, GPS receivers and other devices for connection to an RS-232C personal computer serial port.
The OPTOLINX incorporates special provisions for connecting the AR2700 and AR8000 to a PC for full featured computer control scanning, even allowing the user to control multiple radios at one time. Interface the AOR AR3000A receiver with the DC440 decoder and the OPTOLINX to allow for decoding of DCS, CTCSS, and DTMF.
The OPTOLINX can interface with an NMEA 0183 compatible GPS or LORAN receiver. Use the OPTOLINX, GPS receiver and any communications receiver with a data port to receive Longitude and Latitude coordinates for any signal the receiver receives. * Future software by software developers will allow real-time position mapping.
The OPTOLINX will interface to the Scout Frequency Recorder for the downloading of Scout frequencies in memory. Also, use the M1 Frequency Counter with Optolog software for computer controlled datalogging of all frequencies the M1 captures.
Like the CX12AR, the OPTOLINX will also computer control the ICOM R7000, R7100, and R9000.

The retail price of the OPTOLINX is $129. The unit is currently shipping.
Call the Optoelectronics Toll Free Order Line now. 800-327-5912.
Don't miss out on the latest breakthrough from Optoelectronics.

In article <3148c1f8.4335415@news>, pst@access.digex.net says...
>
>Its comical to see people trying to defend criminal behavior. Rather
>than inventing wild schemes to rationalize speeding, why don't you
>just obey the law like a mature adult, and you won't have any problems
>with the police.

Why don't you allow yourself to have your life dictated to you by a police state? Like sheep to the slaughter. If you really believe that shit I hope someday your wonderful police kick down your door and thrash your house by mistake. While they're saying "we're sorry" you can take solice in the fact that you can sue them. Of course you won't win, and that assumes you have the time / money to persue and that they don't keep you from persuing it. Do you really believe speeding laws are there to protect you!? Your government could give a shit whether or not you kill yourself and your nieghbor on the freeway. Really! Of course your insurance companies wouldn't like it much, which by the way, control the legislature in most states.

There is nothing immature about disagreeing with a "law". Think about this: Speeding laws are considered by all states to be "infractions". This "crime" is not considered a misdemeanor or a felony. Do you know why? Because you can't put the entire population of a country in jail but you can extort millions of dollars annually through "taxing" speeders. Don't get me wrong. I'm not defending people who drive too fast. I am however telling you that speeding is not "criminal behaviour". If it is every driver in the U.S. is a criminal. Speeding does not cause accidents. Unskilled, unprepared and irresponsible drivers do. Because there have allways been so many of these "bad" drivers, the states of this country inacted speeding laws. They are perpetuated by state and local legislators who need to fill their coffers.

I've been driving for over twenty years and about a million miles in over 50 different cars, as well as, all different size motor cycles, commercial trucks and buses. I've had only two traffic citations in that time and both of them were from over zealous cops who were completely wrong, lied in court and did it because they could. I once believed like you and as such I spent a great deal of time / money fighting those tickets. With over whelming proof and undeniable evidence I fought for my rights in court and it all came down to a judge's decission which I hate to say was arbitrary, human and very unjust.

If you really believe yourself than I pity your ignorance.

No. Not with programming. Perhaps with major modifications - but not
worth it.

Cellular telephones are designed with duplexors that allow them to only
transmit on the low side of the channel frequency pairs. They only
recieve the high side. Therefore you can't communicate directly with
another phone - since you can't put one phone's transmitter on the same
frequency as another phone's receiver.

I don't think there is any point in trying to make a silk purse out of a
sow's ear. He should go get a decent radio receiver rather than try to
patch up a poor one.

Also, it may help more to decrease the signal strength rather than
increase it.

: at the same time and mix down to your fm receiver. Infact there is a very
: obscure program (no I don't have it) that calculates where the offending
: signals are and next is to build a filter to trap out at least one of the
: offenders.

: The cure? Add a external FM Antenna... the better fm antennas look much
: like a TV Antenna, except the elements are almost all the same length...
: Use 300 ohm 'twin-line' to feed the signal to the set. Twist the
: twin-line as it passes from antenna, all the way to the set.

: What? No screw terminals for the two wires? Then try a random 'long
: wire' antenna with a alligator clip on the business end and clip it to
: your whip antenna! You may need to move the long wire around till you find
: the best signal. This should provide a stronger signal from you FM station
: and hopefully swamp the front-end with 'desired' signal.

: Weinguard makes a FM PASS filter (75 ohm coax 'f' fittings)... this signal
: loves the FM Brodcast band and tries it's best to reject other signals
: above and below the band. Cost, about $12, retail. I can't vouch for the
: quality of a Radio Shack equiv. More elabroate 'tunable' 'notch' filters
: can be had, but for lot's more money for one of quality.

: Hope this helps!

: Tony

Realistic PRO-39 Cellular Restoration Instructions By Larry Wiland

NOTE: It is unlawful to monitor mobile telephone conversations,
including cellular. Although the procedure described below will
restore
the missing cellular frequencies to your radio, it is possible to hear
this range without any modification whatsoever by tuning in the image
frequencies 21.6 MHz higher than the deleted ranges. Cellular calls
will
be heard from 894.01- 915.6 MHz on your scanner without restoration.

Grove Enterprises assumes no responsibility for damages or other
liability resulting from attempting to duplicate this procedure. It is
possible that this modification may void your warranty.

TOOLS NEEDED: Fine-tipped soldering iron, desoldering wick, small
Philips screwdriver, long-nosed pliers, rosin core solder.

(1) Remove the battery door, holder and batteries from the bottom
of
the radio.

(2) Remove the 4 screws from the back of the scanner and carefully
lift the back off.

(3) Unplug the two wiring harnesses at their connectors and remove
the six bright colored screws holding the circuit board in place.
Unsolder the ground wire from the lower right corner of the circuit
board. Unsolder the two wire connections from the BNC antenna
connector
at the board. Carefully lift the board (grasping it near the Molex
connector) and set it aside.

(4) Remove the two bright colored screws from the next circuit
board. Carefully uplug the two-wire connector. Unsolder and lift the
rectangular metal shield exposing the diodes.

(5) Carefully unsolder and remove diode D6 only; this will restore the missing cellular frequencies which can be searched in appropriate 30
kHz steps.

This completes the cellular restoration. Reverse all procedures to reassemble the radio and test it by entering any frequency between 869-894 MHz. Curious about the other diodes? D4 would enable 68-88 MHz coverage, but deletes 30-54 MHz; D5 (present) allows 800 MHz band operation; and D7 would make cellular spacing 12.5 kHz (incorrect).

We all love to pick on RS. And as a former RS employee (20 years ago, don't blame me for anything recent ;-) - who had to work with some of the 'salesman' types - I can sympathise.

Let me let you all in on something... some of the customers were no picnic either!!! For every bad salesperson story there's a stupid customer story. But that's another thread!

As Ron said, if you're not happy with Radio Shack you can always go to Lafayette Radio or Olson Radio.... oh, I'm sorry you can't - they're out of business!

5455. Frequency look-up sites

Newsgroup: rec.radio.scanner
Date: 1996-03-20 00:00:00 UTC
From: Brian.Petersen@604.sasbbs.com
Message-ID: <afa_9603201017@sasbbs.com>
Source record: 238151

Quite often I hear about CD-ROM discs sold by companies
such as Percon which contain all FCC records for a given
state, etc. However, these are quite costly, about $100
or so from what I have heard.

Now if it wasn't for the radio spectrum's tendency to
rapidly change; that is, continuously seeing new
frequencies, old ones abandoned, etc., I would probably
invest the money to buy one of these discs. But for
something that will be out of date in a couple of years,
the price seems a little too high for me.

So this brings me to my question. Are there any sites on
the internet that are directly linked to the FCC's records?
Sites that I can use in order to perform searches for
various frequencies, agencies, etc.? Whether or not they
are free or require a subscription, I would be very
interested in any information on this topic.

Thanks in advance.

Don't know where this info came from...Some local hams did overhear
someone talking about a poisining and murder plot of his school teacher
on either a cellular or cordless frequency. this info was passed on to
the local police who arrested teh juveniles..they are now facing several
serious charges including attempted murder for spiking their teacher's coffee
with drugs or other dangerous chemicals.

Cellular and cordless users shoule use their head when they speak on such
devices. I only use a land line because i want my conversations to be
private...it's sometimes FUN to monitor the 869-896, 464-465, and 49-50mhz
frequencies..lets also throw in the marine (156-160) and police phone
patches also!!

One more tip: Turn the squelch all the way off, manually go to channel 23 (MANUAL-2-3-MANUAL), step down (with the down arrow key) until you're at the start of the cellular band (869.01 MHz), then move that frequency into one of the monitor memories (MONI), follow the instructions in the manual for moving a monitor frequency into a channel (page 19 in my Pro-51's manual) and put it in any channel you like.

That's it! Now you can jump to that channel any time you want (MANUAL-{channel #}-MANUAL) and then hit the up arrow key to scan up through the cellular band. When it gets to the top (896.0MHz, I think), just hit MANUAL then the up arrow key again to start the scan over. Works very nicely.

- John

Nope, the 45 mHz offset cannot be reversed. The two VCO's usually
dont have that kind of range, let alone the diplexer (it's purpose is
to stop all Tx signal from getting into the reciever).

TD.

When you look at their slogan, what it really means is:
"You're stupid, We've got answers"

They have answers for all the "Stupid" people out there. The worst thing
about that, is that when a knowledgeable person goes in and asks a few
questions, he will leave right away knowing how stupid the answers were.
WHen a "stupid" person goes in to RS, they simply get ripped off or
believe the wrong answers.

At 173 MHz MOST scanner can only be tuned in 5 kHz steps. Look for a
scanner that can be programmed for the increment tuning. Or you could try
finding one of those VERY old analog tuning SW radios with VHF reception.
Good Luck

First of all, are you SURE of the frequency? Its unusual to have a
12.5khz spacing on VHF. At any rate, most scanners are NOT so selective
that they could not pick this frequency up provided you are reasonably
close to the signal, by tuning in 173.510 or .515
I have a problem with an ambulance frequency that is not in my area that
is on 151.995 that I like to listen to and a nearby hospital that has a
low power paging system on 151.990...I always hear the pagers which is
annoying so I simply program 152.000 and my scanner is wide enough that
it still picks up the ambulance system that is -5 khz but not the pagers
which are -10 khz. Hope that helps...

Well, Bill seems you know so much about my career. After 5 years at the crap shack, I spent another 5 years in retail merchandising. In that five year span I doubled the sales of my particular area by putting principles in place that were lacking at RS. RS taught me a lot; they taught me how not to run a retail operation.

After retail, I went to work for a commercial operation of McDonnell Douglas. I started in a new field from ground zero and eventually managed an operation that was not profitable and lacking sales growth. After two years in became profitable and ranked second in the division.

After that I successfully launched a new product. I can go on and on. But in answer to your question, yes I can run Tandy better than the current management and I have the experience to do so. And when you have been as successful running the types of

operations that I have and have the same amount of successful experience as I have, then you can be a "blowhard" just like me.

Tandy runs RS like crap and does not manage the company to its fullest potential. They run the company like a Dodge Viper that is never driven over 30 MPH, when it is fully capable of going well over 100 MPH.

When your only experience is RS, you have nothing to compare it to. If your only home is a dung heap, then that looks pretty good until you have lived in a mansion. RS is a dung heap.

Well, Monitoring Times was close, but not quite correct. It is not illegal to listen to those frequencies unless the broadcast on the frequency happens to be from a cordless or cellular phone. The amended ECPA makes it illegal to listen to cordless phones (unless you are a party to or have permission from the parties to the conversation). It does not specify individual frequencies. So, it is also illegal to listen to some 900 MHz frequencies...when the frequency is carrying a cordless phone conversations.

Like Radio Shack has any credibility.

5478. Stuck with new Pro51. Please Help!

Newsgroup: rec.radio.scanner
Date: 1996-03-20 00:00:00 UTC
From: steevre@aol.com
Message-ID: <4iptbc$1fv@newsbf02.news.aol.com>
Source record: 238174

I have a newer model Pro 51 (date code 3A5).

I understand that this scanner is too new to be modified with the keypad mod.

Here are the options I've found so far:

1. A company placed an ad in one of the popular communications magazines stating that they could unlock the 800Mhz range in any scanner. They add a button on the scanner housing and tweak the oscillator chip which puts the 800Mhz band in the 400Mhz range when the scanner is put into down convert mode. This costs around $100 for the Pro 51.

2. There are converters that you can use in place of the antenna for around $80. From what I understand, these do not work in the 30Mhz intervals that you need to use the 800Mhz band effectively.

3. I can cut my losses and sell the Pro 51 and buy a more modifiable scanner (i.e., used Pro 43).

Can anyone suggest a better\more cost effective option than any of these?

Thanks.

From: richard@andes.sps.mot.com
Message-ID: <4iq243$qci@newsgate.sps.mot.com>
Source record: 238177

Why does it seem like this "band" is hardly ever included in
scanners. I bet part of the reason is that it is where the
up-conversion takes place. But it seems that only the R1, Yupiteros,
and AOR 8000 can actually scan this band. I assume it is because they
use a dual up conversion method. If this right? What is on this
band beside some the the UHF television stations?

> none of them can receive this freq....

Tune to 173.510 instead of 173.5125 MHz.

You cannot adjust the step size on most lower cost scanners, but
that's ok in this situation. Most scanners are broad
enough and have a wide enough modulation acceptance to be
tuned 2.5 kHz off center without significant degradation in
reception.

Hobbyists have monitored FBI, ATF, Customs, and USSS on VHF
interstitial channels for over 20 years with old workhorse models
like BC250s and BC300s which tune in 5 kHz steps in the VHF-high band.

BTW, the portable Uniden/Bearcat BC3000XLT can tune in 12.5 KHz
step sizes as can the BC9000XLT base.

>> ... a scanner that will pick up 173.5125.
>> ... a split or splintered freq. What are these.
>> This is the freq used by a military hospital ...
> First of all, are you SURE of the frequency? Its unusual to have a
> 12.5khz spacing on VHF.

The Federal channel plan does use the 'odd' steps in several VHF ranges.
The normal (or 'even') steps are at 25 kHz intervals, starting at round
numbered frequencies, i.e. .x000, .x250, .x500, .x750. The 'odd' steps are
offset 12.5 kHz, i.e. .x125, .x375, .x625, .x875.
The 'odd' offsets can be found primarily in the ranges:
162.6-162.8, 163.4-163.6, 163.8-164.0, 164.8-165.8
166.4-166.6, 167.2-167.8, 171.2-171.4, 173.4-174.0
These seem favored by the FBI, law enforcement arms of the Treasury, and
non-tactical applications of the military.

"Splinter" frequencies are ones that don't fall on 12.5 intervals (such
as the 151.995 mentioned). These are often narrow-band pagers or telemetry.
Then there are the real oddballs, like 171.409375, which government agencies
use for their own obscure purposes.
(The term "split" refers to the difference between paired freqs., such
as the input and output of a repeater.)

That having been said, if the scanner lacks a 12.5 kHz interval but can
be set to a 5 kHz step, you should be able to receive a good signal at either
173.5100 or 173.5150, which are only 2.5 kHz off. If it insists on 'even'
25 kHz offsets, you're out of luck.

>frequency?" Why not use circuitry that tunes directly into the desired frequency? In
>other words, what's the image frequency used for and why?
>
>Many thanks,
>
>J. Guy Stalnaker

The image frequency is an unavoidable consequence of superhetrodyne receiver design. In a good receiver, the front end filtering is sufficient to prevent the image frequency from reaching the first mixer. In a cheap radio, or a wide frequency coverage radio, the front end filtering may not be good enough, so the image frequency mixes with the first LO and the output appears in the IF where it is amplified and demodulated along with the desired frequency.

There is a radio design that doesn't have images. It's called a TRF design. TRF stands for Tuned Radio Frequency, and it is simply a chain of RF amplifiers all gang tuned to the desired signal frequency. But it has other, and worse, problems than image response, so it was abandoned for the superhetrodyne design way back in the 1930s.

The three main problems of the TRF design are to get all those RF amplifiers to track tune in sync as you tune from station to station, dealing with the selectivity changes as you change frequencies, and avoiding self-oscillation. The superhetrodyne design sidesteps these problems by doing the gain and selectivity at a *fixed* IF (Intermediate Frequency). This eliminates the variable gang tuning problem, and eliminates the problem of selectivity changing with frequency. Since it is a fixed frequency subsystem, self-oscillation problems are also relatively easy to avoid.

The tradeoff for that is that you need a mixer to convert the desired signal to the Intermediate Frequency by beating the desired signal with a LO (Local Oscillator) that is tunable. Unavoidably, the mixer gives you both sum and difference products, hence there is an image. As I said, a good superhetrodyne receiver has sufficient filtering ahead of the first mixer to prevent a signal at the image frequency from entering the mixer, a cheaply built receiver often does not.

The most common FM IF frequency is 10.7 MHz. So the desired signal is tuned 10.7 MHz to one side of the LO, and the image appears 10.7 MHz to the *other* side of the LO. The product in one case is 10.7 MHz and in the other it is -10.7 MHz. The negative sign merely means the envelope of one of the signals is reversed from that of the other product. So it's like looking in a mirror, and it is thus called an *image*.

Since the desired signal is 10.7+10.7=21.4 MHz displaced from the image signal, you only need a filter before the mixer that will pass one of the signals but reject the other one 21.4 MHz away. This is usually an easy filter to design and build.

But for the TRF receiver, you need a *bunch* of *tunable* filters that are capable of rejecting a signal only 200 kHz away (the separation between FM broadcast channels) from the desired signal. That requires a Q (sharpness) that is very hard to obtain in a gang tuned design. So the TRF design fell out of favor many years ago. It is still sometimes used for VLF (Very Low Frequency) receivers because the needed Q is not so hard to obtain at the lower frequency.

My employees average $9.00 an hour because they are competitive and
competent. I work an average of 50-60 hours a week (as do most people
with real jobs) and will always make more money than you will. But, Wow!
Awfully familiar here, aren't we? So much so, in fact, that you seem to
be an ex-Radio Shack salesperson or some other kind of ex-salesperson
who just couldn't hack it, and now has some sort of twisted vendetta
against the source of you most embarrassing failure. We're you fired?
Was your manager really really mean to you because you wouldn't, how
would you put it, um... "tolerate the way the system tried to exploit me
and my customers?" Even if you deny it, anyone with an ounce of sense
won't believe you anyway because your endearing little tantrums just
tell too much. I'm sorry that you've been psychologically scarred. If
this outlet works to help you deal with the pain, though, by all means
continue. Now that I understand, I won't interfere. And if it makes you
feel better, I'm sure people feel sorry for you.

> >Hugs and Kisses. - Guba!
>
> Oh great... a Fag Radio Shack Manager....

Actually, Arthur, it's called sarcasm, or an ironical criticism. These
are known as literary devices. Ever consider furthering your education?
I hear GED's are pretty affordable these days.

Note: Too anyone following this thread, in my first post, the name was set to "Jason Spangler." I didn't realize it until after I posted. (He uses this machine too). Sorry Jason. The post should have had my name on it: Phil Tull. Here's my follow-up...

David: At first, I was laughing at your comments. But as I read on, I saw that you are actually a sick and mal-adjusted individual. I suggest that it would be nice to obey the law and your response is "I hope the police kick in your door." Now there's a rational mind in action. Do you realize that you proved my point? You're setting an excellent example of why we NEED to control certain people - people like yourself, who are incapable of behaving in a civilized fashion. If the world had only 10 people in it, there wouldn't be a problem with "crazies" careening down the street, but it doesn't. There are billions of innocent people around, people who don't want to be run down by some arrogant child-in-a-man's-body. That's why society created rules. People in a civilized society live by rules and everyone benefits.

You gain nothing by speeding. Every morning I see the type-A yuppies go screaming by, and a minute later, I'm right behind them at the next light. The light turns green, they go screaming off again until we meet up at the next light or traffic jam. Why do you do that? Are you sexually frustrated? Are you rebelling against "the man"?

Normal humans go through a phase during adolescence where they naturally rebel against their parents. You, David, are stuck in that phase. Your body has grown up, but your mind hasn't. You now view the Big Bad Government as your parents. You are breaking laws, such as speed limits, as a form of rebellion, AND YOU PITY ME!???

If I said before that speed kills, I was wrong. I meant to say that SPEEDERS KILL. I saw a whole family murdered by a punk like you last Thursday. My own father was killed by a reckless driver some 9 years ago. I'm sure that everyone reading this thread knows someone who was killed by a speeder. And still you try to defend it. You have to break the law, simply because the police tell you not to. What a child you are.

So you've been driving for 20 years? Why do you sound like a 13 year old kid? If you really are the age you indicate, then you're seriously messed up. Did you ever take a course in Psychology? I can picture you, driving your BMW with the tag "2FAST4U", passing people on the shoulder, giving everyone the finger. They should give people a maturity test before issuing a driver's license.

So, speeding is not a crime. Do you know how many people are killed each year by armed bank robbers? Do you know how many are killed by people like David? I think you know. 52,000 people are killed each year by macho cool-dudes like you David. Just because you haven't been caught YET doesn't excuse what you do.

As for the police, they have my full support. In fact, I wish we had a hundred times more officers than we do. You say they only write tickets to collect money. Why then do they write warnings? Huh? They write tickets because that is the only thing that gets through to you people. What should they do, tell you to stand in the corner? So, your all upset because you have to pay 50 dollars because you were caught speeding? They SHOULD take your license away. They SHOULD make you perform community service at the local emergency room and see what its like to lay there in agony, dying, with your family at your side. I think that people like you are the scum of the Earth, and I will continue to do everything I possibly can to keep you from ruining innocent people's lives.

The problem is not in our government or our laws, its in YOU David. Do I really believe speeding laws are there to protect me? Yes I do. And I don't obey the law just because it is the law, I obey the law because I give a damn, and I am part of the solution, not part of the problem. Your money would be better spent on counseling than on a RADAR jammer. While your at it, lay off the coffee. Buy a punching bag to take out your frustrations. You need to grow up and stop embarrassing yourself.

I've been shopping at Radio Shack on & off for years.
I find it easier just to tell the sales people thats I'm looking
If I don't see what I want on display I leave!!
The nearest RS to me won't take special orders
even though the district manager said they would.
I've written RS in Texas with no response whatsoever.

Nonetheless, anything I've purchased at RS seems to be well
built and made to last..you just have to know what you want.

Reading all the posts it seems to me that maybe Tandy should
"adjust" their advertising by putting a disclaimer regarding
"answers"

For technical help - try contacting a local Ham club.
Those folks are freindly and usually know a local store
that specializes in Ham radio and have very knowlegable
people working there and will help and give advise even to
non Ham operaters like me.

BTW the RS nearest me is in the Middlesex Shopping Center in
Maryland.
Theres an Indian lady who works there that tries very hard to help
her customers but its easy to tell she has no real technical
background but she admits it !!

The "manager" well.....he has his own agenda .... work
the clerks to death and hid in the back!!

Charlie

>First, I'll thank you for having the courtesy to refer to "my kind" as
>"clerks" rather than "droids" or some other derogatory term. It seems to
>be quite an enjoyable, knee-slappin' practice for you folk.

Radio Shack "sales associates" are called "droids" cause of the programming that the company attempts to push into their personnel. The biggest bitch "us folk" have is the bullshit advertisments claiming that answers are available at Radio Shack. The ads certainly push the idea that while you can buy electronic stuff at Sears or in fact anywhere, the reason you would want to shop at the Shaft is "cause we have the answers"... Just what the hell kind of questions are your staff prepared to offer? I take it you have read some of the postings in this group and it seems that you feel the problem is with a very small portion of RS staff. I think it is much more rare to find a "droid" who actually knows the details of the products he is selling.

>Second, I'll note that your twenty plus years as a salesperson seems to
>have left you quite a bitter man. Odd, considering that from the
>hubristic tone of your message you should doubtlessly be one of the
>happiest men alive! Surely! After all, your message suggests not only
>your absolute supremacy within your field, but also the indispensability
>and magnificence of your company, and of you, sir, in particular.

Well.. here is the kettle calling the pot black... You, sir, are a RS store manager.. big deal...

>Radio Shack is a company; a really big one. Its parent company, Tandy
>Corporation, exists for two reasons--to make money, and to have some
>sort of positive impact on the communities in which it conducts
>business.

Are you for real? Do you really think that Tandy Corp exists to have some sort of positive impact on the communities in which it conducts business??? Why don't you see to it that Tandy implements a "Scanners For The Homeless" program? Perhaps "TV's for welfare mothers"? Tandy Corp exists for your reason number 1 and number 1 ONLY !!!

>To Tandy's credit, it does an enviably fabulous job at both.
>Now that bad part.... When a company is as large as Tandy, it's
>sometimes hard to keep tabs on all 30,000+ employees. No excuse, I
>understand, but still a big number, huh? Anyway, (brace yourselves)
>sometimes really really really big companies don't do everything

Again I call BULL SHIT !!! Tandy may be big... but each store has a store manager and if he can't keep track of the one or two employees that work for him, then I guess he is the biggest droid of all....

>result in certain practices that offend certain persons. Bad... Yeah, I
>know, but heck, we're human, we learn, we evolve, it just takes a while
>sometimes, especially when you're huge, and set in your ways. Hey that
>reminds me, the point of this whole thing.....

Just what "certain practices" are you talking about? Would you admit that if
you paid a decent wage you would get a higher class of sales droid???

>Humanity. Has it ever occurred to you that even large, disdainful
>organizations are made up of individual people? Silly thought, I know,
>but bear with me for a moment. These people, for whatever reason, have
>set before them by their employer (company) certain tasks which they
>must perform whether they agree or disagree. Good employees do what
>they're told.

THIS IS HOW DROIDS ARE BUILT ....

>Now I know, I know, you're saying "If the stupid, lazy bastards just got
>an education or learned a trade they would have to have that job" et
>cetera... I'll admit, we have some stupid lazy bastards working for us.

Oh good.. is being a stupid lazy bastard a requirement or are you willing to
provide training....?

>That's why we try not to employ people like that for too long. They
>irritate me too. The other kind of people we have working for us have a
>desire to be a part of Corporate America. They want to move into
>management and beyond within one of America's most succesful and revered
>retailers. They strive to succeed, personally, and professionally which
>usually requires that they abide by the prescripts of their company.

Oh good.. know we know where Radio Scat managers come from... stupid lazy
bastards that have a desire to be a part of corporate America...

>"Why don't they go work for a real company" you might say? We're quite
>real, I assure you. Our average manager earns $35k annually, our good
>managers earn $50-$75K, and our best managers and district managers earn
>over $100k. All levels or management, btw, are promoted from within,
>meaning, we all started as salespeople.

How come you don't give droid salaries? How many hours a week do you put in
for your 35K? I think you are exploited by your district manager and you in
turn exploit your sales droids... How many times have you screwed your droids
out of commission by asking them to put up stock or sweep the floors while
their sales per hour ratio drop below commission range?

>
>Bottom line, please don't dehumanize Radio Shack personnel, even if the
>individual attempting to assist you offers little assistance. Even our
>rookie employees and ignorant employees still deserve to be treated like
>human beings. They have families, and feelings, and egos probably not
>very much unlike yourselves.

If these people had a lick of ego they would find honest work at a McDonalds a
company that REALLY makes a positive influence on the community..

>If you have a problem with a particular
>individual or encounter tell the Manager, the District Mananger, the
>Regional Manager, Divisional Vice President, Executive Vice-President,

Is the irony of my statement lost in this thread?

You only have to go back but one post to Glenn's post to confirm
what you assume.

As for the "same principle"... when the ECPA was first passed, making
it illegal to listen to Cell phones, the Supreme Court was still
upholding the rights to listen to cordless phones. It wasn't untill
a few years later that cordless phones where added into the ECPA since
some officials didn't think that the rather obvious antenna was an
obvious sign that the user didn't have "a reasonable expectation of
privacy."

5503. OS-535 for PRO-2035 anygood?

Newsgroup: rec.radio.scanner
Date: 1996-03-20 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <4io690$ul@coranto.ucs.mun.ca>
Source record: 238225

Does anyone have a PRO-2035 with a OS-535 installed? Do you find
it a good interface? What about the programs that come with it?
Anyone hear of the "GOLD" interface software? I know about the
dumb anto-store of the 2035 but it was ment to skip stored
channels/frequencies in it's auto-search. It says this in
the introduction in the manual. So I guess it's abug in the
firmware. Anyway around this to get it working or semi-working like
manually locking out the frequencies as it finds it. Maybe the
problem is the scanner not locking it out but if you do it
your self it will. With the 2042, does it lock out the skipped
frequencies or say skipped on the display? How about another
way to start the auto-store feature.

I don't know about the 2035, but the 2030 uses [2],[9], and [L/O] at the same time while turning on the scanner to program channels 1 to 25 (of 80) to various frequencies from 30 to 950MHz to be used for repair and alignment.

Nothing else about the test mode was mentioned.

--> 2) The nearest scanner tuned to cordless or cell phones.

I don't think that this is legal. I *know* that cell scanning is a
violation of FCC regulations, making it a felony, so I would have to
assume that cordless scanning would be the same. After all, it is the
same principle.

F > <feilerm@iea.com> writes:
F > Help. I need to find a scanner that will pick up 173.5125.
--
Use a scanner that allows for manual STEP entry, then go to the channel number you want to enter that frequency in, then (using the Pro-26 as an example) press:

Program, Shift, Step [move to 12.5kHz], Shift, 173.5125 <Enter>

That's all. It will now pick up that exact frequency. Some of the high-end scanners will allow direct entry without having to go through the above procedure. To keep the cost below $400.00 you may want to consider a used one (Pro-2004, etc), which will accept the direct entry of that frequency.

>such a radio exist?

It sounds like it could be a simple enough MOD for a person with
a steady hand and a soldering iron... and a scanner which presents
a voltage (accessable to the hacker) when there is carrier present.

The tricky part, would be to interface an overide into the panel
mounted Priority switch... the method would be different depending
upon if it is a momentary toggle or a 2 position switch... the two
position would be the easiest, but the push-to-toggle is probably
the more common.

The basic principle would be to have the circuit deactivate the
priority scan when voltage is present at the carrier test point, and
reactivate it when the carrier is dropped.

For a slide-switch priority system, the hack might be about $1.00
worth of parts... for a push-to-toggle, probably somewhere between
$10-$20, as it would require a bit more logic than the former (which
would probably only require a single ic gate.)

>: where it is overloaded.

>Actually, when the circuitry is overloaded, it should limit and prevent

>AM from getting thru. Maybe the circuitry is not overloaded enough. ;-)

First, some detectors do not depend on heavy limitng.

Second, since AM goes to zero power in the modulation

trough, no limiter will totally eliminate a fully modulated

AM signal. One the AM signal goes through the limiter, it is

now a phase modulated signal. The phase mouldated signal

will be easily detected in the FM detector.

Dan Prysby (prys@msg.ti.com) wrote:

: If so, then how is one supposed to know if he is listening to a
: frequency that originated from a phone and is thus illegal vs a
: frequency that originated from a non-phone and is thus legal?

As a practical manner, listening is illegal only if you make use of the information in a way which harms the person you listen in on. So if you hear phone conversations, but just keep them to yourself, who will know or care. You are only going to get in trouble if you go around letting others know you are deliberately tuning in phone calls, or using the information for any harmful purpose. If you just listen and keep it to yourself and get your private jollies, no one is going to get you in trouble. Yes, you might be doing something "illegal", but you aren't going to get caught. And if the mere thought of doing something "illegal" bothers you just don't listen in.

Oops, I missed that part.

However my idea would take care of those problems when you use the
priority to interupt those long 100+ channel scans without actually
interupting a transmission on the non-priority channel.

What is the date code of your Pro-51? The earlier versions allow you
to enter test mode and subsequently access 800 mhz frequencies (though
I haven't tried it myself).

>created rules. People in a civilized society live by rules and
>everyone benefits.

Hold on just a second. First of all I am not defending speeders. I was
only questioning the enforcement of laws in general. I was refering to
the statement you made:

>>>"why don't you just obey the law like a mature adult, and you won't
>>>have any problems with the police".

This is just simply not true. There is an alarming increase of wrongful
acts being perpetrated by police officers / agencies which are violating
the rights of innocent citizens. Expecting to be treated with equal
justice just because you are not breaking the law is a benign belief which,
I am sorry to say, is no longer a reality.

Further I went on to say that "DISAGREEING" with a law is NOT immature.

I DID NOT say "VIOLATING" a law was NOT immature. I went on to voice my
opinion about the corrupt system which perpetuates itself and "BIG
BUSINESS", namely the insurance companies.

The point I was trying to make here, (although some what off the subject)
was that driving laws in general are supposed to protect people, yet they
are being used as an instrument for insurance companies to extract large
sums of money from citizens who are being forced to buy their product. In
a perfect world speed laws would be used for exactly what they were meant
for and I have absolutely no problem with that. What I am telling you is
that the laws are being subverted to allow a self perpetuating system to
demand and get unfair amounts of money from ALL of us, NOT JUST THE
SPEEDERS!

By saying speeding is not a criminal offense I was pointing out that the system labels these acts against society as infractions not as misdemeanors or felonies, (unless of course we're talking about Reckless driving). Simple symantics. If they were labeled as misdemeanors maybe the process would work more like it is supposed to rather than just allowing the insurance companies a vehicle by which to arbitrarily raise rates. Further I was pointing out that speed in itself does not cause accidents. Unskilled, unprepared and irresponsible drivers do. Would you not consider a driver weaving in and out of traffic at an excessive rate of speed as all three (3) of these?! Again, simple symantics. My intent was to clarify and broaden the spectrum of bad driving by pointing out that the speeding was a symptom of the problem, namely "BAD DRIVING". I don't think we are in disagreement here are we?

And finally sir, you do not even know me. You have read and misinterpreted one (1) posting by myself and yet attack my character and label me personally.

>You gain nothing by speeding. Every morning I see the type-A yuppies
>go screaming by, and a minute later, I'm right behind them at the next
>light. The light turns green, they go screaming off again until we
>meet up at the next light or traffic jam. Why do you do that? Are you
>sexually frustrated? Are you rebelling against "the man"?

Allow me to tell you about myself, please.
I am not a "type-A yuppy". In fact I am not even a yuppy, (much to old to be considered young, I don't live in the "burbs", however I am professional).

I do not go screaming off from stop light to stop light. I am a very cautious curtious and controlled driver who tollerates the transgressions of others in a mature manner, not as you say, "passing people on the shoulder, giving everyone the finger".

As far as being sexually frustrated and/or rebelling against "the man"... I've been married to my beautiful wife Jenny for almost eight (8) years now and we have two (2) beautiful and intelligent children. Successful and fulfilling family life doesn't lend itself to very much "rebelling" of any kind.

>Normal humans go through a phase during adolescence where they
>naturally rebel against their parents. You, David, are stuck in that
>phase. Your body has grown up, but your mind hasn't. You now view the
>Big Bad Government as your parents. You are breaking laws, such as
>speed limits, as a form of rebellion, AND YOU PITY ME!???

Let's see now.... ...rebelling against my parents, mind hasn't grown up, Big Bad Government, breaking laws, etc. etc... ...well lets see...

I graduated from high school as val. of my class; 3.89 gpa; at age of 15. I already had a year of college as well. I moved into my own house two (2) days later. My Dad and I have been best friends as long as I can remember, haven't seen my mother in decades. Oh by the way, I have supported myself completely since I was 14 and I paid all my college expenses.

I have a BS comp sci., MBA Buss. Ad., and a PhD. in Digital Electrical Engineering.

I used to be that Big Bad Government. I reported directly to Major General Hable, Bull Commanding General of the United States Marine Corps, (3 stars) Can you you guess what I used to do?

>If I said before that speed kills, I was wrong. I meant to say that
>SPEEDERS KILL. I saw a whole family murdered by a punk like you last
>Thursday. My own father was killed by a reckless driver some 9 years
>ago. I'm sure that everyone reading this thread knows someone who was
>killed by a speeder. And still you try to defend it. You have to
>break the law, simply because the police tell you not to. What a child
>you are.

I do not, have not and will not break the laws of this country, it's states and territories. THIS INCLUDES SPEEDING!. You assumed, (and we all know what that does) incorrectly that I was defending speeding and promoting illegal behaviour.
YOU ASSUMED INCORRECTLY!

My heart goes out to you and I know the grief you feel. I too have lost loved ones in automobile crashes. I was however, not defending speeding as I hope I have made clear. Again, I do not break the law, for any reason.

>So you've been driving for 20 years? Why do you sound like a 13 year
>old kid? If you really are the age you indicate, then you're
>seriously messed up. Did you ever take a course in Psychology? I can
>picture you, driving your BMW with the tag "2FAST4U", passing people
>on the shoulder, giving everyone the finger. They should give people
>a maturity test before issuing a driver's license.

I don't own a BMW, I'm much more frugal. As far as taking a course in Psycology, well I studied under Dr. Dresser and Dr. Holland at UCLA for two (2) years before getting my MBA. I'm a student of Transactional Analysis and yes, I can spell Erik Fromm.

>So, speeding is not a crime. Do you know how many people are killed
>each year by armed bank robbers? Do you know how many are killed by
>people like David? I think you know. 52,000 people are killed each
>year by macho cool-dudes like you David. Just because you haven't
>been caught YET doesn't excuse what you do.

Do you see yet where personal attacks on ones character end up? I'm not a macho-cool-dude and people who drive the way I do, don't kill any one. I won't get caught because I don't break the law. That is not to say though that I won't be wrongfully persecuted someday.

>As for the police, they have my full support. In fact, I wish we had
>a hundred times more officers than we do. You say they only write
>tickets to collect money. Why then do they write warnings? Huh? They
>write tickets because that is the only thing that gets through to you
>people. What should they do, tell you to stand in the corner?

I suppose you'd like to pay for all of those new officers? And by the way will that really solve the problem and even if it does do you believe it won't create other larger and far more dangerous problems? Remember the Soviet Union, Nazi Germany and all of the other societies which started to put more emphasis on police than it's citizens.

>So, your all upset because you have to pay 50 dollars because you were
>caught speeding? They SHOULD take your license away. They SHOULD
>make you perform community service at the local emergency room and see
>what its like to lay there in agony, dying, with your family at your
>side. I think that people like you are the scum of the Earth, and I
>will continue to do everything I possibly can to keep you from ruining
>innocent people's lives.

No I'm not upset about anything, but you sure seem to be. I accept the reality that police are humans and make mistakes. Today's courts in an effort to herd cases through their halls in an assembly line fashion, rarely take the time to realize this. A police officer can say pretty much anything and the only defense you have is to say, "I think the officer means well but I believe he is mistaken because of...".

In as far as performing community service, having my license taken away, etc., etc., I ask for what? I have broken no laws. Do you see where I'm going with this?! Maybe you've made some incorrect assumptions?

>The problem is not in our government or our laws, its in YOU David. Do
>I really believe speeding laws are there to protect me? Yes I do.
>And I don't obey the law just because it is the law, I obey the law
>because I give a damn, and I am part of the solution, not part of the
>problem. Your money would be better spent on counseling than on a
>RADAR jammer. While your at it, lay off the coffee. Buy a punching
>bag to take out your frustrations. You need to grow up and stop
>embarrassing yourself.

I think we've pretty much covered who has embarrased themselves.

Wednesday, March 20, 1996

MIMS -- To help the Team USA members stay in touch with the important people in their lives during the 1996 Centennial Olympic Games in Atlanta, a special limited edition, top-of-the-line, alphanumeric pager has beencreated. Every U.S. Olympic athlete will receive an OlymPager(tm), a powerful palm-sized pager that will enable them to receive full-text messages - anytime, anywhere - from coaches, teammates, family and friends. A limited number of these pagers will be available to consumers. The new pagers, each with a personalized serial number, will carry the U.S. Olympic Team logo.
/Motorola Press Release/

LMPS -- The South African Police Services (SAPS) announced it has awarded Motorola and South Africa-based Alcom a contract for a new SmartZone(tm) UHF two-way radio communications system. The system will serve SAPS personnel working in the City of Cape Town and the greater Western Cape region. Alcom distributes Motorola two-way radio products and systems throughout South Africa. The SmartZone system will include 17 sites and 7,200 MCS 2000 mobile and MTS 2000 portable radios. The contract is valued at $26 million dollars.

For sale: Uniden Bearcat/Sportcat SC150B. Got it in a trade.

Comes with original stuff. Duckie, charger, manual, freq. book,
original box and packaging. Original store receipt was for $198.

The unit is in perfect condition and scans very fast.
100 programmable channels searchable in 1 second. 12 bands.
Handheld unit. The manual says it's designed for sporting
events but there are no limitations in the programming.

$160 including shipping in US48.

>
>I was told that someone on this group would be able to recommend decent >rechargeable batteries. I tried nicads, they are junk. Charge them for 8 >hours, use them for 45 minutes.

I would suggest that you were using batteries that had insufficient capacity (using AA cell where D cells should have been used.)

You didn't say anything about what they were being used for.....

It all boils down to capacity. If your load draws an amp, AA cells would carry it for about 1/2 hour (750mA*Hr). On the other hand, D cells would carry the same load for about 1.5 hrs (2amp*hr).

This is true for any battery chemistry (NiCad/Lead acid, Lithium, ect...)

Deciding factors then become physical shape (size is set mostly by the capacity), cost, and speed of recharge.

There are NiCad batteries that can be charged in 4 hours, some in one hour, but the fatser charging rates require chargers designed for that purpose.

>Are the rechargeable alkalines any better? What's likely to be the >longest lasting rechargeable battteries I can find?

They are slightly better at first (150% of a Nicad), but capacity falls off rapidly with the number of discharge/recharge cycles.

A rather cynical suggestion would be to buy a small motorcycle battery, or gasoline generator.

As an Assistant Manager of one of those places many, many years ago, 1 story that I heard keeps coming to mind.
This customer calls up and starts complaining about the poor quality of the Radio Shack products. This customer had just purchased the latest gadget, the "Microwave Leakage Detector". Anyways, this customer felt like they were getting the run-around because this unit didn't work worth a sh__, and they wanted their money back.
Finally, after many calls, this customer ends up talking to our Canadian president at the time. (They used to occasionally rotate on the customer service phone lines). Our President calmed down this customer by explaining that the Microwave Leakage Detector was designed to work OUTSIDE of the microwave oven, not INSIDE.
Apparently they were given a replacement FREE OF CHARGE.
Another time, 1 of our newly hired salespeople was writing up a small purchase for a customer and asked for the customer's name (back then we had to write everything out!). This customer says,"Don't worry about it... here's the money"
After a few more attempts to get the customer's name, the customer starts to get annoyed and says,"Fine just make that out to Cash". After which our new salesperson replies,"And your address, Mr. Cash?"

Hope ya like 'em.

I do not work for Tandy or RS, nor do I wish to defend all their practices, but they have survived in a really tough segment of retailing, namely consumer electronics. The margins on most items are incredibly thin, therefore, Tandy started having products produced under their own name. Now they have gone to a mix of name brand goods as well as the house branded stuff. Yes, they do some strange things, and yes most of the goods are overpriced, but you must admit that they have survived when alot of other good retailers have had to bail out. And it is convenient to have them in so many locations in most cities when you need to finish a project in a hurry and just want commodity items like coax cable or phone jacks etc.

I maintain, that if you or someone can come along and outdo them, step up to the plate and give good ole American capitalism a try. Radio Shack needs some competition!

Otherwise, quit complaining! :)

This guy IS a rocket Scientist AND he's on the government payroll!!!

cRiTTa66 <critta66@shadow.net> scribed:

xxok, heres the story,
xxA friend and i built the "FM-25" yesterday. We turned it on and
xxnothing.. So we looked at the troubleshooting guide, "check all the
xxcapacatators for correct poplaraty" so well what do you know i
fucked up
xxon C4. So i re did c4 which is a 10uF ec. tried it again, it worked!

xxAfter a little while of use (1 hour) is just stoped. no nothing,
just
xxstatic. I was prety MAD. So i took a lot at the PCB, it looked fine,
no
xxbridges or anything. My friend lookd at it and held it in her hand..
It
xxsuddnelt worked again. After this i set it up again to play some
music
xxfrom my walkman while listinging from my stero system in my room.
after
xxthe fm-25 stoped working again is was ovious something is really
fucked
xxup with it.. but it was geting late and she had to go home. So today
i
xxwas resoddering all the parts to see if i could fix the problem...
xxIt works again. Ok this is good, then it fucked up again! Dam i was
xxpissed. so i started touching the underside of the PCB, where all
the
xxsoddering connections are. it still wasnet working. Even though the
xxlight for "freqency LOCK" was on the transmiter wan't working.
before
xxthe led would just be off.

xxi also have this problem geting stero on the fm-25 before the unit
xxcompletly broke. any ideas?

xxWell im having trouble , should i send it in to be repaired for $36?
xxOr just send in the BA1404 and the program IC's to see if there
fucked
xxup? i dono. well if you have any suggestions please e-mail me at
xxcritta66@shadow.net.

xxThanx in advance

All you need to do to decode an AM signal is rectify it. Any transistor
junction can act as a diode junction under the right circumstances. I know
someone who gets nearby CB signals on his CD player -- no RF circuits at all,
it's being picked up in the audio amp.

: checked! How does an FM receiver with poor-selectivity receive AM
: transmissions???

It could be due to a number of factors. I ccan think of one off-hand.
The LO is being pulled by the strong signal from the airplane. When the
LO is FMed, then it appears as audio.

Ferexample. The FM station is at 105.1. The LO is 10.7 MHz higher, at
115.8. The image is at 10.7 higher, or 126.5. That's right in the
middle of the aircraft band. The signal comes in so powerful that it
gets thru the frontend with a lot of power. When it hits the mixer, it
pulls the LO and FM's it.

The only way to answer the question definitively would be to get an
aircraft transmitter and put the radio and it in a screen room, and test
try to simulate the problem. Then some measurements might give a
solution.

: : >transmissions???

: : If close enough, it will. I have picked up CB radio transmissions (Also
: : AM) on a nearby FM reciever.

: "AM rejection" is a spec which applies to FM radios. It is worse on
: cheaper ones.

I'm assuming that by worse, you mean is has poorer AM rejection.

: The circuitry used to detect FM signals can respond to changes in the
: amplitude. Especially when the circuit is cheap, and under conditions
: where it is overloaded.

Actually, when the circuitry is overloaded, it should limit and prevent
AM from getting thru. Maybe the circuitry is not overloaded enough. ;-)

>Slope detection

>Mike

Ummm...I came within a couple of milliseconds of falling into that
same trap. Slope detection works for listening to FM on an AM rig;
going the other way around requires imbalance in the ratio detector or
discriminator -- not hard to do on a cheapie radio where the diode
bridge are random diodes thrown into the board.

==========
You bet! Of course, I solved the problem by upgrading to a Pentium 120 ;-)
You might try the DOS version of the CD search engine. It's much faster.
Another suggestion would be to do a search for just your local area for
all frequencies/services, and save that as a .DBF file, and use your
regular database program to search that file for your searches. Also much
faster.
Hope this helps.

=====
The problem here is a well-known glitch in the PRO-43; it has an intermod
problem right in the railway band. That's why you don't have the same
problem with your BearCat.

I've got a 2042 with the 535 installed. Whether or not it is a "good" interface is hard to say. It's the *only* interface, so I guess that's one for the plus column! Seriously, I like having computer control, not so much because of the interface but the flexibility that a PC and software gives you in managing freqs, banks and so forth. It doesn't come with any programs (well, it comes with one very limited demo program). "GOLD" is Scancat Gold. I used Scancat for a while but did not like it. The interface is dated and not at all intuitive. At the moment, I'm running Probe, which I like a lot. It's very fast and flexible (I'm still trying to work through all of its features).

I don't understand the rest of your question, so I can't answer that part.

xx>Does anyone know what lengths the bars need to be on the antenna to
xx>pick up the 143-144Mhz range. I would think that you dont need most of
xx>the bars because they are all in different ranges. We are trying to
xx>make it fairly small. Thanks in advance,

xxMost directional TV antennas are log periodic dipole arrays (LPDAs) witch
xxmeans that the entire antenna is active over a pretty wide bandwidth. If
xxit is a VHF TV antenna it should work well anywhere from 50 Mhz to 300
xxMhz.

xxOn an LPDA there really isn't any one set of elements that are cut for a
xxparticular frequency. If you are using it to receive 144 Mhz it will
xxjust use the resonant region of the antenna for it.

xxRemoving elements can effect the performance of the antenna over it's
xxentire opertaing range. TV antennas are pretty cheap. You might just
xxwant to go out and buy a smaller one - one that was designed that way.

Source record: 238116

Hi all,

Can anyone tell me if this is a decent scanner? I have some SWL
experience and would like to get an inexpesive scanner. I picked up the
SC150 on the way home from WalMart so I could give scanning a try (and
quite possibly take them up on their liberal return policy!).

I'm currently listening to police traffic (finding the channels just by
searching the bands--someone just robbed a McDonalds).

I figure at least I'll have a benchmark now and can decide what features
I need/want. Any comments very much appreciated.

Thanks,
Geoff

The reckless driver >of the vehicle caused the crash by driving carelessly.

Well, this seems like a topic that is too good to let go. As an EMT I get to see my fair share of accidents (and I hear of many more). 99.99% of accidents are *NOT* (can we say NOT??) caused by speeders! In fact I'd even venture to say that whomever said that speeding is not in the top ten is correct. Almost every accident that I've seen was caused by A) alcohol or B) driving too fast for conditions. Now, please don't read item B) as speeding because I don't know a single person (you either Phil) that can tell me what "too fast for conditions) means! That patch of ice or that water spot on an otherwise dry and clean street could easily cause an accident.

As to the statement that they aren't accidents, I don't think anyone normally intends to run into another's car (unless the fool in front of them slammed on their brakes; which also is illegal).

If so, then how is one supposed to know if he is listening to a
frequency that originated from a phone and is thus illegal vs a
frequency that originated from a non-phone and is thus legal?

SS wrote:
>
> Would someone please explain to me what these are?
> PLEASE??? Thanks!A trunked radio system is just a type of mobile radio system. Instead of using discrete channels, the system uses computer controlled radios to assign frequencies to groups of radios (talk groups) every time someone talks. In other words, you need to program all the frequencies of the trunked system into your scanner to listen to a conversation, because every time there is a break in the conversation, the frequency may change. Trunked systems are usually only on 800+ Mhz. They are used for large groups of mobile radios where there are several different users (talk groups) eg police, fire, dog catcher, works dept etc and by using the trunked system, there is a reduced chance of a "busy" frequency (since the system assignes a "free" one by computer every time) and the system can therefore handle more users than a conventional radio system. This also means that if you listen to only one or two frequencies of the system on you scanner, you will (A) not hear all the conversations of a given group and (B) you will here parts of conversations of different groups on the same frequency at different times as the channel constantly gets re-assigned by the controller. There will also be one or more frequencies in the system that is constantly transmitting just data. This is the computer control channel and you'll have to lock it out. On some systems, the frequency of this channels changes from day to day.

Hope that helps...

It's time for me to upgrade. I bought this scanner new in 1988.
It has tape out, antenna and external speaker jacks. Battery
backup for memory, mobile mounting bracket and 12 volt
power leads included. AC line cord is attached.
It covers these freqs: 30 to 54, 108 to 136, 138 to 174 and
380 to 512. There are 200 memories in 10 banks.
Always used in the home, never mobile. $100.
Reply to 75110.2753@compuserve.com.

I do not believe the FCC maintains the frequency database online. What they have done is given Percon the right to market it on CD-ROM. Percon does have their CD-ROM online at www.perconcorp.com. You can search it all you want, but it's not linked real-time to the FCC. Their CD-ROM is updated quarterly, I assume they use the latest one in their website. Buying the CD will give you the option of searches on a wider variety of criteria, but all the data is on the website. And besides, I don't see that buying the Percon CD every so often for $30 is that big a deal.

SX25's are slow machines. Also, the speed of your CD drive makes a big
difference. Remember that a 1X CD rom takes over an hour to read all the
data from it. You might look into a 4X or 6X CDROM drive.

Jim:

It's not Percon's fault, or problem. You have to consider several things here.

1- The CD-ROM has a database of over THREE MILLION records!!!
2- CD-ROM drives are very slow when compared to the speed of a hard drive.
3- Not to offend you, but a 386SX system with only 4-MEG's of RAM is no speed demon.

I'm using the Percon Spectrum CD on the following system:

PENTIUM 133-MHz
32-MEG's of RAM
4X Toshiba CD-ROM
Windows-95
(2) 1.6-GIG Western Digital Hard Drives

Needless to say, performance is not a problem with this type of setup. To speed things up even further, I copied the entire CD-ROM to a hard drive partition (only because I had the room). This made response time almost instant!

You are working with very large amounts of data, that not too long ago would have demanded a mainframe computer to process.

If you know someone experienced with dBase, or FoxPro, they could extract the data that is just for your area. This would be a much smaller datafile and might possibly fit on your hard drive. Another solution might be to purchase Percon's regional CD, which narrows it down to approx. 1/5th the amount of records you're currently searching through.

I am, if anyone would bother to go the the NHSTA WWW site, they'd see the figures. Sorry, speeding is not in the top ten. There was also a report put out by some LEO agency that said that when the Police cannot figure out why a person crashed, most of the time they will put down speed as the reason because that is the only thing they have found. So of the 1.7% of accidents blamed on speeding they estimated that over 50% were actually unknown but it's easier to put down speedong as a cause/

5588. FR-146 FM Receiver Kit

Newsgroup: rec.radio.scanner
Date: 1996-03-21 00:00:00 UTC
From: bremer@orion.ee.stcloud.msus.edu
Message-ID: <31519F47.4948@orion.ee.stcloud.msus.edu>
Source record: 238139

My partner and I are using the Ramsey FR-146 2-Meter FM receiver kit to receive data broadcast at a frequency of 155.445 MHz. The data is sent with a 6 second delay between each new message. We are having trouble squelching out the noise during the 6 second delay period. The squelch seems to either cut out nothing or it cuts out everything including the data being broadcast. If anyone has any information regarding this kit or where we could receive help, we would appreciate hearing about it. Please e-mail any comments or suggestions.

Thanks.

5589. Has anyone ever thought of a priority scan that doesn't interupt?

Newsgroup: rec.radio.scanner
Date: 1996-03-21 00:00:00 UTC
From: lsi@aldhfn.aldhfn.org
Message-ID: <lsi.827399749@aldhfn.aldhfn.org>
Source record: 238140

I have a Uniden/Bearcat SportCat SC150B. It has the 10 priority channels which can be VERY handy especially when listening to certian transmittisons which do not utilize PTT techniqes. At any rate, I am wondering if any company anywhere has thought of a priority scan which does not interupt what I am currently listening to unless a transmission is detected on one of the priority channels. This would probably add considerable cost to the scanner as it would need two tuners, but does such a radio exist?

Oh and where can I get that list of mods? I know the SC is very new but any chance of any mods for it?

They use FoxBase as the DB, now owned by MicroSoft. At least for the
Spectrum CD, they don't seem to have provided much of an index to speed
things up. A lot of searches I do end up reading the whole database.
Plus, FoxBase itself seems to be pretty bad.
With a 6x CDROM and a 486/66, I still find it objectionably slow.

Anyway, if you happen to be running Linux, or want to get a pretty simple
C program running under Dos/Windows, I wrote one that will read the
DB itself or a ufdbf export file from Spectrum. It doesn't have any
indexes (yet), but you can extract all the frequencies for your state, say,
and then use fmtdbf (the C program) to select based on ANY of the
fields, like service code == PP and county == foobar. Since the export file
is on disk, it goes much, much faster.

Web to http:www.mv.com/users/wje/aor.html and look under the C programs
stuff.

>fullest potential.

I've got to agree. Radio Shack does some very peculiar things:

They issue catalogs once a year. Competitors do catalogs quarterly, or more.

They make the customer *buy* the catalog. Savvy competitors charge the vendors to appear in the catalog.

Radio Shack's merchandising techniques appear to be out of the dark ages of retailing. Product placement appears to be done by an engineer, not a merchandiser. Detailing seems nonexistant.

I know Tandy can do reasonable merchandising; their Computer City and The Edge chains demonstrate this. Their Incredible Universe stores are nothing short of incredible.

Does anyone know why Radio Shack is run the way it is? From my observation, they stay in business selling low-dollar but high-margin items that aren't readily available elsewhere, and hope the customer decides to pick up uncompetitive high-dollar items while he's in the store.

obScanner: They do have a nice selection of scanners. Hopefully they'll add AOR now that they carry non-Tandy-branded items.

"Radio Shack" doesn't post articles to this newsgroups... individuals do. In the case of Mr. Opitz, his summary appears correct: Monitoring specific frequencies wasn't made illegal, monitoring specific types of transmitters was.

I'm not a Radio Shack fan, but your post seemed rather petty and unfounded.

> Any hints? Thanks in advance...Dan
--
Image interference around 1100 MHz can be the result when using a
jumper to power the 800 MHz for the purpose of receiving cell images
in the 360-385MHz range. A signal at 410 MHz for instance will also
be received on (approx.) 1170 MHz, with the jumper making it a bit
stronger. While there are ways around it, they would require more
parts and work, so fewer people would be interested to do the mod.

Another cellular image range is 110-135 MHz which covers the air
frequency band, so for those who like to listen to air planes,
this is very annoying. I'm experimenting with different circuits
right now to attenuate 800 MHz interference when programming the
air band. No easy task - there are over 100 tiny surface-mount
RF frontend components crammed into an approx 1x1 inch space!

Some people have mentioned cellular "images" around +/-1020 MHz,
but these are only intermod fractions and don't cover the entire
25 MHz cellular spread.

John,
100 ft is a little long for RS-232 (depending on the baud rate).
Double check your wiring (I'm not sure how the Opto456 is configured -
DTE or DCE) you may have to wire it with pins 2 and 3 crossed. Ohm out
your short cable to check. You may be able to maximize your signal by
doubling up on the wires (you probably only need 8 lines max, if your
using hardware handshaking. If your using software handshake, pins 2,3&7
should be sufficient. If worse comes to worse, you could install a
short-haul modem (that'll work to about 5 MILES...) they're pretty cheap
these days.

>I apologize for using this bandwidth but I have to state my position.

You certainly have the right to post your opinion,,,, and I don't?????

>It is the sellers right to put whatever price he wants on his stuff.

Anyone can post any price he/she wants, as you indicated.

>If you believe that price is too high then don't buy it.

I DO indeed know it is much too high & WILL NOT CONSIDER IT!

This post
>would have been gone if the price police hadn't flamed it several
>times.

Are you not also adding to the "flame"?????

I am tired of seeing post after post return to the newsgroups
>because someone had a comment about the price of an item.

Don't read the ones marked "FS".

Please let
>the seller set his price and the market (buyers) determine if it's a
>good one or not..

I intend to. However, why do people post here? Think about it..... They either need info or are trying to help someone out with a little info that they have. Helping each other, right?? Now, understand my post. I did not intend to "cut" or "slash" anyone, nor did I intend to be insulting. After reading the note, I assumed the person wanted to sell a radio. Secondly, from the extreme price, I assumed they never sold used equipment before. You and I both know the seller has about as much a chance selling that radio as you do selling yours at $895.00. So why not help some one out with some constructive advice???

>
>Again sorry for the bandwidth but I had to express a point.

> listen to manually programmed freq's, which means you'll have to know the freq.

Mmmm...having to dust the cobwebs off on this one....as its a long time
since I had a BJ (!!!).....

You can search between two frequencies.

If you want to Search between 126.00MHz and 132.00MHz the key the UPPER
limit (132.00) first and press the DOWN ARROW. Then key in the Lower
limit (126.00) and press the UP ARROW. The BJ will now search between
126.00-132.00.

Likewise to search between 440.00 - 450.00 key in 450.00, DOWN ARROW,
440.00, UP ARROW.

You cannot change the increment steps, I seem to recall these were
either 5 or 10KHz steps depending of which part of the spectrum you were
searching but I cannot honestly recall what they default to.

Hope this helps.

I have the following UHF Portable FOR SALE:

Bendix/King Mod # LPU4140 UHF/14 channel/Programmable/Scanning HT. The unit comes complete with the following items/accessories:

-2 batteries (have superior standby/receive times)
-1 Speaker Microphone (1 month old)
-2 Belt clips
-1 Rapid-Rate Desktop Charger (Mod# LAA0325)
-1 copy of programming manual
-2 antennas (one stubby and one long UHF)

Unit is in good cosmetic and working condition. It can be programmed via its numeric keypad (DTMF capable as well).

This unit is great for a mixture of uses, such as commercial, ham, GMRS, and as a good quality scanning receiver.

If interested, please contact me at the following e-mail address:

pm3751s@dunix.drake.edu

$550 + UPS Shipping/COD takes the whole package.

The Spectrum CDROM is written in Foxpro and is indexed on 9 fields. The performance problem you experience is due to the low memory. It will work with 4 meg however it will be slow. As you increase your memory it will improve. Typically on a 486-66, 16 meg ram 4x CDROM, you will see about 3000 records per minute. You might also call in for support if the problem continues after you increase your memory.

Try our web site and check out our performance.

There was an article in Radio Electronics about 4 years ago on how to
build one of these.

They don't use "special" chips, but the kind of parts you cannot get at
Radio Shack. And at these frequencies, the board layout is critical,
merely having a schematic is not enough.

Source record: 238005

The problem is more than likely not the nicads, but rather
the current drain design of your scanner. I have a
PRO51 with 4 AA nicads purchased at WalMart and
get about 14 hrs on one charge using the earphone
and about 10 hrs using the built-in speaker. Electronic
equipment can have good or bad power consumption
design characteristics depending on the company
and its engineers.

When buying a scanner, look at all the specifications,
not just the receiver specs.

Also, are you sure you are getting a full charge? Mine
take 12-16 hrs using the low rate built in charger in
the scanner. If possible, use a volt meter while charging.
Watch for the nicad to peak and then start to decrease.
When it take its first drop in voltage, its fully charged.
This is how some better chargers sense when to shut off.

See message 38117

I hate to nit-pick too (lie!); but the reason for my posting the original message is that this newsgroup covers the whole world. The person who first posted that "S.D.P.D. ON 800 - NO FUN" was only thinking of his own narrow little world - San Diego. How are the rest of us supposed to know what he is talking about? How would someone in Germany be expected to know what S.D.P.D. means? Or even someone in Louisiana or Texas where there is another San Diego.

Now, Ken Koller, how do you expect me to know that San Dimas contracts with the Sheriff's Department and, therefore, there is no San Dimas Police Department. You see -- you, also live in your own little world.

When you communicate with people on such a wide level, it would be a good idea to think ahead and put yourself in the other person's position.

Jack Clarke

Yes according to EDCO JAPAN AOR is ONLY producing 70 AOR 8000 a day.

Not good.

No more till sometime in APRIL.

Update still waiting on AOR5000 seems JAPAN is working on the cell block to
meet FCC approval.

I sure hope I have them for DAYTON.

Just curious. Couldn't you just punch in that freq. and automatically
the scanner rounds off to the nearest freq of that and if the signal
is strong can't it be heard. I'm doing it now with other freqs. and
it works. I'm off 5 mhz from the broadcasting freq and still hear it
fine. Explain? Nick

To the serious scanner fan,

This file was five US Government files found at NTIA/OSM; burried deep within the Internet. Now, all five files are combined into one document. The redundant info has been editied out. The data includes assignments from 137MHz thru 5GHz! It is a outstanding resource document.

The assignemnts include government, military, ham radio, experimental, and private.

Use this great file to find, government, earth to Space Command links, Pioneer 6~12, government long range surveillance operations, Galileo, Ulysses or law enforcement video surveillance allocations and much more.

Brief descriptions of use/service/intent are given for each block of frequencies. This file specifies those assigned blocks; it is NOT frequency list, however, on occasion, specific frequencies are given.

I use a file called LIST.COM to search and navigate this document. It is both fast and efficient.

Fot those that feel the data/frequencies go beyond the scope and use of most home scanners, edit the file down to suit your needs or get the book(s):

: Hidden Signals On Satellite TV or
: WRTH Sattelite Handbook or
: Tune To Satellite Radio on your Satellite Dish
(Grove Electronics)

Enjoy!

If the signals are out there(in the open) and I have a receiver, purchased legally that can receive these signals, then I will make the choice to listen or not. It's up to the manufactures of the phones to scramble them if they don't want people to intercept the signals. You can't legislate a law that's unenforceable. How can anyone stop me? (not that I listen - personally I could care) .

San Diego is by far the biggest metro area with the initials S.D. Can anyone name the second and third? Probably not, unless they looked it up. It wouldn't be South Dakota, obviously, because cities, not states, have police departments. This abbreviation seems perfectly logical and justified.

The population of San Diego, Texas, is probably less than the San Diego, CA police force. Come on!

True, those outside of North America might be a little confused, but remember that they are probably less than 5% of the people that read this group.

Steevre (steevre@aol.com) wrote:
: I have a newer model Pro 51 (date code 3A5).

: I understand that this scanner is too new to be modified with the keypad
: mod.

: 1. A company placed an ad in one of the popular communications magazines
: stating that they could unlock the 800Mhz range in any scanner. They add
: a button on the scanner housing and tweak the oscillator chip which puts
: the 800Mhz band in the 400Mhz range when the scanner is put into down
: convert mode. This costs around $100 for the Pro 51.

: 2. There are converters that you can use in place of the antenna for
: around $80. From what I understand, these do not work in the 30Mhz
: intervals that you need to use the 800Mhz band effectively.

It's not the fact that the converter doesn't have the 30Mhz intervals.
The converter just shifts the entire 800-900 Mhz band down to
400-500Mhz. What happens here is that your SCANNER won't tune 30Khz at
this lower band. Also, this applies to option 1, too. Option 1 will
also make your scanner pick up cellular at a different band, and it, too
won't tune 30Khz intervals.

Between the two, however, I'd choose option 1. They both cost about the
same, unless you build the converter yourself, then you might need fancy
test equipment to calibrate it. And the converter is bigger than a
handheld scanner and requires a separate power supply.

: 3. I can cut my losses and sell the Pro 51 and buy a more modifiable
: scanner (i.e., used Pro 43).

: Can anyone suggest a better\more cost effective option than any of these?

Yeah, try to find a band which picks up cellular images. Most scanners
have one somewhere, a place other than cell freqs which picks them up. If
needed, go near a cell site where the signals will be strong. After a
couple hours, you'll find how boring it really is and lose interest.
Remember that often you hear only one side of the conversation, and also,
calls very often switch cells (cut off) every minute or so.

Ed,

The 2 scanner & computer deal might work, but there is still a few
obstacles to overcome.

You would to have information about all the little details that makes
1 trunked system different from another.

You would have to get your computer to ignore tons of incoming data
that your system would not be set up to use.

You would need to know what the Talkgroup(s) I.D.(s) are that you wish
to follow.

You would have to decode the T.G. assignment and link it to a
frequency on that particular trunking system. The channel assignment
the controller makes is a Motorola Channel Number which is different
that the FCC assigned channel number, and it is still only achannel
number, not a frequency.

And there are many other issues to tackle as soon as you have resolved
the few I brought up here.

I have found it a great help to have access to the Motorola
software, all the system parameters, a Trunked radio to make into a
scanner, and the system keys which enables the software to work :)

I mentioned the system key(s), because without them, everything
else is worthless... I have software for 6 mobile/portable products,
and without the Sys Keys, all I can do is read the radio's data. The
software will not let me change most of it, or reprogram, modify, or
clone the units. Motorola has even made it so that other stand alone

support units (SIMS, SIMS II, SIP, SystemWatch, etc.) need the
software, or a hardware key to "enable" them for a particular system.

I hope I have answered some/most of your questions, otherwise
this could start to become quite a tangled thread:)

If you are still undaunted, then here are a few other things to add to
the "pot".

Since the simple analog trunked systems have gone on line, Motorola
has added:

Type II trunking

Call Alert

Private Call

Emergency Buttons on radios

Telephone interconnect (coming and going)

AMSS (I don't remember) wider area coverage

Smart Zone (another wide area coverage)

Encryption (DES, DES-XL, DVP, DVP-XL, and Fascinator formats)

Digital (ASTRO)

Digital Encryption

And More, all to make for some interesting scanning problems...

Good Luck!

Z

That would make sense with most scanners. However, several years
ago, some political "procession" with RCMP (type of Canadian Federal
police) in tow drove by near were I live. I listened on a Regency,
and on a Bearcat scanner (both portables), and on the Bearcat I was
able to pick up an unlisted frequency in-between regular RCMP
channels, though it was somewhat distorted, but I was unable to pick
up the same frequency with the Regency.
So I used the direct search with a Pro-2004, and it zeroed in on
two in-between frequencies, that were not on the regular 12.5 kHz
stepping sequence, nor were they listed in a local scanner book.
Looks like that Regency's high selectivity prevented reception of
"unconventional" channels.

Here's some info on New Jersey's Medivac Helicopter System:
The system consists of two helicopters, one covers the Northern NJ area and is located at Morristwon Airport and is called Northstar. The other one covers the balance of the state and is called Southstar. As far as Nortstar is concerned, it has the capability , on board, of communicating with any town, city, or municipality via programmable VHF / UHF radios. You can sometimes hear the callup for standby on 155.295. If you are aware of a situation that involves Northstar doing an e-vacuation, monitor the local police and fire freqs for the city or town involved. Obviously, it also maintains communications on the standard aviation freqs required by the FAA. Good Listening to you.

well scott the best thing to do to ease your mind is to go to your local
ham shop and get a lightning arrestor. it will install on the coax and
then run i line to a grounding rod... that way you will not have to
worry...

as far as if there is a big storm in your area... chances are about the
same as a tv antenna getting hit.......
i think the lightning will take a tree 1st....

have fun..

FOR SALE FOR SALE FOR SALE FOR SALE FOR SALE FOR SALE FOR SALE FOR SALE

Realistic scanner!!!! Model pro 2030 80 channels covers 29-54 138-174
380-512, and the 800MHz band. this unit can be EASILY modified to
receive the cellular telephone bands to! Physically this unit's in
excellent condition it's less than a year old. It comes with a stock
antenna, and a higher gain center loaded antenna, power supply and
manual! This unit has inst-weather button. It can search thru desired
band widths, you pre program!. This unit is light in weight and can fit
almost anywhere!!!!!!!! I'm asking $125.00.

Leave me email at h2osport@intac.com if you are interested
thanks!
JOHN

xandi electronics sells a schematic and board diagram for about $10 (ask for only the manual), and ~$50 for the whole kit. I havn't tried it, but it looks like tuning would be hell...

i'm not sure of the number, but it is an 800 number and directory assistance would have it. I've built their kits in the past, and they have been very well documented. They also advertise in Nuts and Volts, so you could find the number there.

/>mteditor@grove.net
/>name

Read the goddamn law. I am not saying you can listen to cellular
or cordless phone CALLS. Just that listening to specific
frequencies was not OUTLAWED, just listen to certain types of
SERVICE.

Ie; I can put 46.610 mhz in my scanner and listen all day, all night, legally... UNLESS... someone happens to use their cordless on that frequency, then, my receiption of that caller would become illegal.

Hi BC 9000 owners!

I've had mine for about 6 weeks and am now determined to complete
the programming of all 20 banks.
I have some ideas on what I want to do but I also wonder how other
owners are set up.
So I ask the experts (Bob & Doug & others come to mind) How DO you
do it?!?!
And thanks for your input!!

5661. Re: Any (dis)recommendation on Sportcat 150?

Newsgroup: rec.radio.scanner
Date: 1996-03-22 00:00:00 UTC
From: rbrowne@erols.com
Message-ID: <4it84e$aqk@news7.erols.com>
Source record: 238073

I was in your position, and picked up a used SportCat 150 for $130 6 weeks ago. It is a great little scanner. Get yourself the ScannerMaster which lists all the frequencies for your area and program them in. The fun will just start to begin! I have learned that one of the "features" of the low-priced SportCat is the fact that it does not have the most advanced filtering. As a result, you get a little more interference but you also get plenty of "cellular imaging" frequencies in the 800-956 mhz range! These are frequencies that are not the actual cellular freq's, but identical images of them. (as you know, it is illegal to manufacture scanners that pickup cellular, this was a new law that took effect about 3 or 4 years ago. Buying a used one modified for cellular is legal, but you will pay for it)

Keep the SportCat..it is great!

I think you all qualify to work for Radio Shack because so far no one
has gotten what RG stands for: Radial Ground.
It is true, though, that it was used before they called it coax, but
Radial Ground was the U.S. Military designation.

Thursday, March 14, 1996

MIMS -- The Information Systems Group (ISG) Transmission Products Division launched ISDN LifeGUARDs, believed to be the only service of its kind to help consumers get Integrated Services Digital Network (ISDN) service installed in their home or office by simply calling for help. Also unveiled was the SURFR Setup, for easy configuration of Motorola's BitSURFR Pro ISDN Modem. /BUSINESS WIRE/

MIMS -- ISG's, Transmission Products Division also introduced two new ISDN transmission products and the industry's first back-up power supply for a consumer ISDN device. Announced were: BitSURFR Pro, HMTA 200 ISDN/V.34, and BitBRICK. /BUSINESS WIRE/

GSS -- The Cellular Infrastructure Group announced its plans to incorporate AudioCodes Ltd. Wireless Telephony Privacy (WTP) devices which will enhance call privacy in its analog Wireless Local Loop (WiLL(TM)) systems. /BUSINESS WIRE/

5679. Mailing list for Eastern Mass.

Newsgroup: rec.radio.scanner
Date: 1996-03-22 00:00:00 UTC

Due to popular command I've created a new mailing list, this
list covers all of Eastern Mass from West of Worcester to the
East right to the water.

To subscribe to the list, send a message like this:
To: scan-mass-east-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-mass-east-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe
Digests currently go out about every two days.

If you have direct WWW access, you can get on (or off) of the
list via the simple interface at:
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east/
or:
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east-digest/
depending on which list you're interested in.

Tell your friends and spread the word!

Quite so. It's out there whizzing through the aether for anyone who can to catch. To make it illegal to catch any electromagnetic radiation is simply stupid. It cannot be policed and it cannot be stopped. No one with a cell phone or cordless phone or CB radio or any other devices that broadcasts a signal has any reasonable expectation of privacy. It's out in the open. The courts may say what they like, it's irrelevant.

Interesting that LoJack, 173.075 Mhz is the exception. It used to be an FBI frequency. (could that be what you were listening to?) It is a system to track stolen cars by the police. The car is stolen, the LoJack transmitter in the stolen car is activated by the authorities, and Direction finding ensues.
Hope this helps!

And we know that you never EVER exceed ANY posted limit correct? Because
if you did you'd be risking everything. ANd of course, being the law
abiding citizen, I know your scanner cannot pick up cellular and has
never been modified to receive it correct? Because, hey, it's illegal. I
assume you also stopped listening to any cordless phone after Oct 1994

> Did you really think that a logical argument like yours would sway them?
> What THEY want is all that matters.

I have yet to see a LOGICAL reason not to speed. It's safe, 99.9% exceed
the limit everyday.

Ahh, you've been reading to much of Federico Pena's Inelligent Highways
System. Electronic License plates, etc. Well, it's big brother and will
never fly. Best case scenario (Pena's) has electronic license plates
coming in 2006, not exactly "soon"

> It's beautiful in a cosmic sort of way, isn't it?

Yep,just think another technology to exploit. The day those license
plates come out, they'll already be hacked.

>checked! How does an FM receiver with poor-selectivity receive AM
>transmissions???

Remember that the poor selectivity is in the receiver front end,
allowing the image signal into the receiver. This doesn't have
anything to do with IF selectivity. Now as to how an FM receiver
can demodulate AM, if the receiver uses a discriminator, it will
happily demodulate AM too unless the signal is strong enough to
have it's amplitude variations stripped off by the limiter stage.
If the receiver uses a ratio detector, it won't have a limiter
because a ratio detector is theoretically insensitive to AM
variations. But if the ratio detector isn't perfectly balanced,
it will still demodulate the AM signal too. So either of the
popular types of FM detector can demodulate AM under the right
conditions. One of those conditions is likely to exist in a
cheaply made FM receiver using a whip antenna.

APPENDIX D

SPECTRUM USE IN THE FIXED AND MOBILE SERVICES

This section summarizes the Federal spectrum use of the various bands between 75-1400 MHz frequency range allocated for Federal Government fixed and mobile services. Frequency bands that serve a major common function are grouped together for convenience of discussion.

The information is based jointly on data provided by the Federal agencies and the data records contained in the NTIA Government Master File (GMF) of frequency assignments. While some information is presented in terms of the number of Federal frequency assignments, it should be noted that the number of actual radio equipment will exceed, and sometimes far exceed, the number of assignments in a band, since one frequency assignment may represent many radio equipment. The Federal assignment data used in the spectrum use assessment are current as of October 1993.

118-137 MHz BAND

Internationally and nationally, the 117.975-137 MHz frequency range is allocated to the aeronautical mobile service on a primary basis. Nationally, the 121.9375-123.0875 MHz, 128.8125-132.0125 MHz and a portion of the 136-137 MHz frequency bands, which represent a total bandwidth of 4.85 MHz, are exclusively allocated for use by the non-Federal, and the remaining portion of the overall band is shared by the Federal Government and non-Federal entities on a co-equal basis. The entire band has a total bandwidth of 19.025 MHz and 13.675 MHz of bandwidth is designated for shared use; no portion of this band is allocated exclusively for Federal Government use.

Aeronautical mobile service spectrum requirements are accommodated mostly in the HF (3-23 MHz) and VHF (117.975-137 MHz) portion of the radio spectrum. The VHF band provides the primary communications mode for Air Traffic Service (ATS) and Aeronautical Operational Control (AOC) safety communications for all areas of the world where radio line-of-sight services can be established. In the United States, this band is used by Federal Aviation Administration to provide ATS safety communications and by users such as, the airlines, business aviation, and general aviation to provide AOC safety communications. Each communications frequency is re-used as often as possible (due to the fixed number of available frequencies) so that continuous coverage can be established to support air traffic control systems. The FAA maintains an extensive network of over 3,050 VHF radio stations giving reliable coverage over the most areas of the United States.

138-150.8, 162.0125-174, 220-222 AND 406.1-420 MHz BANDS

Federal Government land mobile communication requirements are accommodated in segments of the following bands which are allocated to the fixed and mobile services for non-tactical use: 138-144, 148-149.9, 150.05-150.8, 162.0125-174, 220-222, and 406.1-420 MHz. Federal Government agencies use the fixed and mobile radio systems that operate in these bands to accomplish a variety of missions that serve the public. The approximately 80,000 frequency assignments throughout these bands represent over one million Federally-owned radios. Since the dominant bands used by the Federal agencies for land mobile operations are the 162.0125-174 MHz and 406.1-420 MHz bands, the list of major users presented in Table D-1 only accounts for these two bands. The "Others" category includes Federal agencies with 20 or less assignments.

Federal mobile radio systems use a wide range of equipment types in a variety of geographic environments for voice and data communications. Common types of equipment include base and repeater stations, mobile stations, and hand-held portable stations. In nearly all cases, this equipment is the same type of off-the-shelf equipment used by local and state public safety agencies.

Mission requirements often lead to worldwide and nationwide, as well as local service areas that range in natural character from remote to urban. Federal Government missions are mandated by Congress and the President, and generally have no counterparts outside the Federal Government. The closest are the state and local governments with similar missions that own and operate their own systems. The major differences lie in two areas: (1) the national security operations and wide area safety services of the Federal Government, and (2) the geographic areas of communication coverage required.

****
Table D-1. Major Federal Users of the 162.0125-174 MHz and 406.1-420 MHz Bands.

Federal Government radio systems support agency mission requirements in the following broad categories: law enforcement, transportation, natural resources, emergency and disaster services, utilities, medical, and administrative. Federal Government radio systems are usually multi-purpose systems; e.g., law enforcement, natural resource, medical, administration, and utility functions may be supported on the same radio system, thus increasing their spectrum efficiency. Federal Government land mobile requirements for each of the above categories are described in the following subsections.

Law Enforcement

Federal law enforcement radiocommunications requirements include everything from hand-held portable communications between internal security posts to nationwide/worldwide airborne communications for drug interdiction and protection of the President. Federal law enforcement radiocommunications must be immediate; delay is not acceptable.

Effective and reliable radiocommunications are required for safety-of-life and property protection of Federal building complexes, Federal lands, military bases, and other types of installations. A major use of dedicated radiocommunications is the security of current and former Presidents and family members, as well as the Vice President and family, and other distinguished persons including foreign heads of state.

Operations requiring high priority communications include movement of protected individuals, in response to violent crimes (bank robbery or kidnapping), undercover surveillance, and arrests. Cases involving counterintelligence, personal crimes, organized crimes, drug interdiction, fugitives, hostage situations, terrorism, smuggling, guns and explosives, counterfeiting, fraud, forgery and tax evasion also require immediate communications. Additionally, portable radios and body transmitters are used inside prisons for prisoner control activities, and by special agents to support investigative functions, and in personnel and property security operations.

Most Federal law enforcement agencies have area offices that are responsible for activities throughout a geographic region. Repeaters and radio links are installed to obtain the necessary radiocommunications coverage within that region. Repeater systems are installed throughout urban areas in these regions to permit necessary portable radiocommunications. Transportable equipment is provided to respond to impromptu travel requirements in support of personnel protection or pursuit of criminal cases, special cases, or other major crises such as Waco, Texas, and the bombing of the New York City World Trade Center in early 1993.

Federal law enforcement systems require communications with privacy. The monitoring of clear voice communications by the general public, the news media, foreign intelligence agents, and criminals has disrupted investigations and caused life-threatening situations for law enforcement personnel and innocent victims. Digital encryption, spread spectrum and other techniques are now utilized to assure transmissions are not compromised.

Installation of radio systems that provide complete coverage of the United States is not spectrum-efficient. However, the mandated missions of Federal law enforcement agencies require the capability to deploy and install both permanent and temporary facilities when and wherever needed, not only nationwide but worldwide. This is accomplished through agency-dedicated means, including full and complete control of installations, operations, and maintenance by the various elements of the law enforcement community.

Transportation

Federal activities in aviation, maritime, highways, and railroads have a heavy investment in both fixed and land mobile operations. Aviation-sector land mobile applications include maintenance, safety, and inspection using portable and mobile radios, and repeaters and base station facilities; remote maintenance monitoring equipment; remote control of robot devices at supply depots; airport runway light control systems and windshear alert systems. These systems are installed in airports and airway facilities for management and coordination activities. The systems use both voice and data to: automate equipment monitoring; perform safety-of-life, anti-terrorist, and air security functions; integrate air traffic control communications within the centers and control towers; and conduct various airport and airfield communications as necessary, tailored to the needs of each airport/airway location.

Federal maritime management coordination, safety, and law enforcement activities also use radios operating in Federal land mobile bands. These activities require nationwide implementation, although many operations are concentrated in seaports, docks, and waterways of the nation's coastal areas, major rivers, and the Great Lakes region.

Federal surface transportation operations provide a variety of management and oversight support to coordinate activities at various highway and rail sites. Many of these functions are mandated by law and nationwide in scope.

Natural Resources

The Federal Government manages its natural resource programs using radiocommunications to accomplish Congressionally-mandated missions. Fixed

stations, mobiles, handheld portables, and transportable repeaters and base stations make up these radio systems. These operations are spread throughout the United States and Possessions, in suburban, urban and rural sometimes remote and almost inaccessible areas. Some systems encompass only a few buildings in a city or a small wildlife refuge. Others encompass large geographical areas, such as, the national forests, Indian reservations, and national parks; multiple counties or states, such as the Tennessee Valley Authority; or are nationwide in nature.

These systems provide for the safety of the public and Federal Government personnel; monitoring and distribution of water; management of timber growth and harvest; protection, operation, and management of our national parks, national forests, range and grass lands, wildlife refuges; protection and management of wildlife and fisheries; recreation; surveying and mapping; protection of Native Americans and protection and management of their lands; forestry and range management; and assessment of mineral deposits. Wildlife monitoring and tracking to protect endangered and threatened species and to control animal damage are performed in these bands with transmitters as small as dimes or as large as softballs.

Emergency situations such as fires, hurricanes, earthquakes, volcanic eruptions, etc., place great demands on the existing communication systems each year and routinely require the use of emergency backup systems. These emergencies sometimes require a tenfold expansion of communications facilities in a matter of hours. This separate function is described in greater depth in the next section.

Emergency and Disaster Services

The Federal Government provides an array of emergency and disaster response communications capabilities to protect the American public and resources from natural disasters and technological hazards. This involves a wide range of missions including prevention, mitigation, preparedness, response and recovery. These services involve virtually every department and agency of the Federal government. Where safety of life and property is at risk, communication systems that can operate reliably even when normal systems are disrupted are essential. Spectrum-dependent emergency radio systems are the only systems capable of providing the essential levels of reliability, mobility, and flexibility during crises. A significant number of the Federal Government emergency and disaster response communications systems interface with state and local governments as well as with national volunteer organizations such as the Red Cross, amateur radio operators and similar groups. An important consideration in managing these emergency assets is the need to conduct periodic exercises to ensure they work when required.

Many specialized emergency requirements have unique spectrum-dependent needs that must also be satisfied by the nationwide dedication of radio spectrum for that purpose. As an example, Federal, state, and local government search and rescue teams deploying to the site of a national emergency or disaster need reliable communications to locate victims in collapsed buildings, administer medical and lifesaving treatment and relocate them to safety or medical facilities.

Providing the communications needed during major natural and technological emergencies requires a significant quantity of readily deployable land mobile radiocommunications. Major natural disasters occur on a continuing basis. Major disasters, such as Hurricanes Andrew and Hugo, the San Francisco earthquake, and the recent floods in the Mississippi Valley have required the deployment of thousands of radios. These have been Federal Government-owned land mobile radios used to effectively coordinate and provide emergency management during the readiness, response and recovery phases of major natural and manmade disasters. Land mobile radios are critical for providing the needed level of flexibility and survivability required. Dedicated, reliable non-blocked resources are required to support these time-sensitive, high demand operations to improve rapid response, to minimize interference, and to safeguard emergency response personnel and the delivery of life saving services to the general public.

Utilities

Federal Government utility operations which provide essential services to both Federal Government and non-Federal users are also supported in these bands. These operations include generation of electric power at fossil, hydro, and nuclear power plants; the distribution of electrical energy and the maintenance of distribution lines; and the distribution of potable and agricultural waters and the maintenance of these systems.

The distribution of electrical energy from the generating plants to the load centers and the interconnection of bulk electrical power supply systems for reliability and adequacy has required the development of complex, supportive radio systems. Communications must be of the highest level of reliability, economically and technically feasible, and must be instantly available for the successful operation of these electrical power systems.

Radiocommunications systems are also vital to the operation and maintenance of water distribution and sewage systems on military bases, water distribution systems encompassing aqueducts and canals in arid areas, and dams for the control of flooding. Radio systems provide for collection of water flow and salinity data and control of irrigation ditch gates and pumping stations for the management of vast water distribution systems and the maintenance of these systems. Dam safety data is transmitted to central processing points to provide early warning of potential dangers and scheduling of maintenance. Day-to-day operations of these systems with limited field personnel resources provide for efficient and timely response to changing customer requirements.

The criticality coupled with the remote areas encompassed by many of these systems have generally precluded the availability of cost effective support from commercial communications providers.

Medical

The Federal Government provides essential land mobile radiocommunications for medical facilities. Reliable radiocommunications are required to provide life-or-death medical care along with the daily operations of a medical center. Radio paging communications are essential to obtain doctors and nurses during emergency situations. Two-way radiocommunications are required to interact with

local governments to provide security, fire protection and maintenance. Reliable radiocommunications are required for local, Federal Government, civilian, and military medical facilities to interact with each other to provide essential emergency medical care.

Administrative

Administrative communications is the descriptive term for various support type communications used for administrative management of personnel or material required in performing Federal Government missions. All Federal Government agencies employ some type of administrative land mobile communications systems within their respective departments. Examples of these support communication systems include base stations for VIP management and control of operations and test-range safety, wireless microphones, maintenance communications, motorpool, building guards, and paging. These systems use fixed and transportable base stations and repeaters, mobiles and handheld portables.

Fixed Uses

The Federal Government fixed uses in these bands include the collection of seismic, meteorological, and hydrologic data for the forecast of volcanic eruptions and earthquakes; identification of potential fire danger areas; and prediction of availability of water for agricultural and public use. These data are provided to state and local officials for planning and emergency operation purposes. National Oceanic and Atmospheric Administration (NOAA) Weather Radio, which provides the public with up-to-date weather information, also operates in the 162-174 MHz band.

216-220 MHz BAND

The 216-220 MHz band is allocated to the Federal Government and non-Federal for the maritime mobile service on a shared, primary, co-equal basis. Fixed and aeronautical mobile services are also shared by the Federal Government and non-Federal on a secondary basis. Federal Government radiolocation is also permitted in the band on a secondary basis, but limited to the military services. Non-Federal government land mobile operations are also permitted in the band on a secondary basis.

In the 216-220 MHz band, there is a total of 1160 assignments, approximately 40% of which are for Federal Government operations. Table D-2 shows the major Federal users of the band. Any agency with less than 10 assignments is not included. The Departments of Energy and Interior are the major Federal users, primarily for telemetry systems in the fixed and mobile services for low power seismology operations. These systems are deployed throughout the United States.

****
TABLE D-2. Major Federal Users of the 216-220 MHz Band.

Freq. Band (MHz)	Federal Government Agencies/Total Number of Assignments						
	Air Force	Army	Energy	Interior	Navy	NASA	Others
216-220	21	12	301	101	12	11	19

****

225-400 MHz BAND

The 225-400 MHz band consists of several band segments. The 225-328.6 MHz and 335.4-399.9 MHz are allocated to the Federal Government for fixed and mobile services on a primary basis. Some portions of these segments are also allocated for military mobile-satellite use. The segments 328.6-335.4 MHz and 399.9-400 MHz are allocated to the Federal Government and non-Federal on a shared, primary basis for aeronautical radionavigation and radionavigation-satellite services, respectively. Discussions on the latter two services were presented in Section 2 under the radionavigation category.

There are more than 23,000 frequency assignments currently authorized in the 225-328.6 MHz and 335.4-399.9 MHz segments of the band. Seventy-five percent of the total assignments belong to the DoD, as can be seen in Table D-3. In the Table, the "Others" category includes those agencies with 20 or less assignments. The FAA, with 23% of the total assignments, is the other major user of these portions of the 225-400 MHz band. Seventy percent of the military use are for air-ground-air, air traffic control, shipboard line-of-sight, and tactical and strategic forces satellite communications. The FAA's assignments are in direct support to the military air traffic control.

The 225-400 MHz band is the single most critical spectrum resource for the military tactical forces, both nationally and within NATO. The DoD operates approximately 75,000 radio equipments supporting its operational requirements in the band. Extensive peacetime training and alert exercises are conducted by the military to maintain their combat readiness. The band is standardized with U.S. military allies in Europe and elsewhere for interoperability during combined actions and is extensively used for a wide variety of functions, including forward area tactical radio relay, airborne, land-based and satellite communications.

****
TABLE D-3. Major Users of the 225-400 MHz Band.

Federal Agencies	Total Number of Assignments 225-328.6 (MHz)	335.4-399.9 (MHz)
Air Force	4,555	2,076
Army	2,532	1,424
Coast Guard	134	176
Energy	75	20
Federal Aviation Adm.	3,537	1,860
Navy	5,153	1,603
NASA	35	25
Others	46	3

****

The FAA uses the band for the control of DoD aircraft within the National Airspace because very few military aircraft have VHF aeronautical band radios. The Coast Guard also uses this band on all its aircraft to support air-ground-

air communications. On every flight, these aircraft actively use and depend upon channels provided especially in the 380-399.9 MHz portion of the band. An estimated 45,000 flights per year is made for missions including search and rescue operations, drug interdiction and other law enforcement, marine environmental protection, International Ice Patrol, alien interdiction, National defense, and support of other Federal Government agencies.

932-935 MHz and 941-944 MHz BANDS

Both bands are allocated to the Federal Government and non-Federal for the fixed service on a shared primary basis. In addition, Government off-shore radiolocation operation is permitted on a non-interference basis and limited to the military services. The 932-935 MHz and 941-944 MHz bands are two of the few bands supporting fixed low-capacity communication links. Spectrum use for every agency is similar in both the 932-935 MHz and 941-944 MHz bands. Usually, a transmit frequency in one band has a corresponding receive frequency in the other band or a paired channel.

The main users of the bands are listed in Table D-4. As shown, FAA and Agriculture are the dominant users with an approximate combined 76% of the total assignments in both bands. The other significant users are Energy and Interior. The "Others" category includes those agencies with 10 or less assignments.

FAA uses these bands for low density communications links (voice and/or data). The majority of their assignments are authorized for the Low Density Radio Communication Link (LDRCL) system, which are deployed across the United States, in support of the National Airspace System. Agriculture's assignments, however, are concentrated on the West Coast and in the North-central States. These assignments are in support of their point-to-point, microwave backbone communications systems. The DOE also operates microwave systems specially in remote areas of the United States where their operation is not accessible by telephone. For example, in the control of operation, maintenance, management and distribution of electric power. In addition, DOE employs telemetering fixed systems for weather data transfer. These bands also support DOE's emergency functions. The Interior's backbone microwave systems are directly in support of law enforcement activities and for their dispatch systems for resource management and fire suppression.

****
TABLE D-4. Major Users of the 932-935 MHz and 941-944 MHz Bands.

Federal Agencies	Total Number of Assignments 932-935 MHz	941-944 MHz
Agriculture	158	153
Coast Guard	11	11
Energy	52	48
Federal Aviation Administration	302	305
Interior	44	45
Navy	14	15

Treasury 15 15
Others 10 8
****

1350-1400 MHz BAND

This band is allocated exclusively to the Federal Government for fixed, mobile, and radiolocation services on a primary basis. Federal Government operations in these services are limited to the military forces, although FAA has few assignments for surveillance radars needed for air traffic control. In addition, the discrete frequency at 1381.05 MHz is allocated to the fixed and mobile-satellite services for space-to-Earth relay of nuclear burst data.

The 1350-1400 MHz band is primarily used by the Army for tactical training. For example, out of the approximately 690 assignments, about 508 assignments (74%) belong to the Army in support of tactical radio relay systems. The Air Force also has assignments for tactical radio relay systems but, the major Air Force system in this band is the Range Applications Joint Program Office (RAJPO) data link. This system, which cost about $100 million and also operates in the 1429-1435 MHz band, provides real-time GPS data to designated military test ranges. RAJPO is currently the only known system to fully support advanced space weapons systems development like the Strategic Defense Initiative. Other major systems supported by RAJPO are advance fighter technology integration, all stealth developments, advanced tactical aircraft, AEGIS, and sonar and antisubmarine warfare. The RAJPO has a tuning range capability between 1350-1450 MHz. This system will be deployed at all major military test ranges and provide, in conjunction with the Global Positioning System, high accuracy position location, target tracking and other uses.

I'm looking for a circuit for a good very narrow pass filter for audio. I'm interested in picking off 300 hz or lower from an audio signal.

Metro Ambulance in Toronto Ontario used a non standard DPL around 30hz.

I can build a curcuit to detect this but I would like to kill off the rest of the audio signals. Any good schamatic??

: device or access a catalog that would have such information? Please email
: me at jablin@nevada.edu.

What exactly is your application? Do you just need to amplify a telephone conversation? Radio Shack sells a nice little single-line telephone amplifier for about $30.

Do you need an actual telephone hybrid to connect callers to an amplifier? Do you need to be able to talk to callers through the hybrid, or can you just use an extension telephone? You could rig up a line matching transformer between the phone line and the amplifier...or again, grab one of the Radio Shack units and modify it to drive, say, a PA amplifier.

If you want to go all the way, then you need a telephone hybrid. Many of these exist, ranging from very basic units all the way up to the fancy all-digital systems that can even talk to these godawful digital office phone systems (I hate those digital phones. If you must have multiple lines, use a 1A2 system...).

Among actual phone hybrids, the only ones I have dealt with are both Gentner products, the Microtel and the SPH-3/SPH-3A. The Microtel actually plugs into the coil-cord from telephone, replacing the handset...you connect to this gizmo with a microphone, headset, and an audio line-out cord.

The SPH-3A is a far more expensive model, designed for rack-mounting. It has an audio input and output, and connects to the phone line like an answering machine. I believe it also contains a 10W amplifier which can be used to drive a speaker directly. Sound quality is really quite good for a telephone.

I have no connection with Gentner except that my radio-station client uses their products.

CS>Looking for common freqs for mall security, private security etc.. Also
CS>anything else... Have all the normal sherif,fire, etc... Want new and
CS>interesting... Have some stuff, news stations etc.. Thanks!

The best mall security freqs have phone patches. The Sunnyvale Town
Center is 464.975 and has a very actively used phone patch. I've heard
them on-line with the Sunnyvale police.

The other (not a lively) malls in the bay area are:

Stanford (Palo Alto) 483.6875
Stanford (phone) (Palo Alto) 461.5875
Vallco (Cupertino) 464.525
Oakridge (San Jose) 464.825
Valley Fair (San Jose) 151.775
Sunnyvale Town Center (Sunnyvale) 464.975
New Park Mall (Newark) 464.975

Most other bay area malls are on 464.475

Note that the freqs are re-used quite a bit.

* SLMR 2.1a * Please return stewerdess to upright position!

Hmm. If the "cordless" phone consists of a base unit and a portable
unit, and the base unit is plugged into the wall outlet to get power to
run, it is really "cordless"? Now if I can hear both sides of the
conversation by listening to the base freq. have I beaten the system
because I am hearing the conversation broadcast by a "corded" phone?

By the way, does ECPA mean Every Congressperson's Phony Action?

Date: 1996-03-23 00:00:00 UTC
From: "B. K." <bk104@hgea.org>
Message-ID: <4j0fcc$flk@hgea01.hgea.org>
Source record: 237965

Without getting too technical, A trunked radio system is a group of repeaters tied together with a controller that controls the traffic. They usually made by Motorola, Ericsson, & E.F. Johnson. A trunked radio system controller can tie together up to twenty (20) repeaters.

Why is it that all the people who are complaining about the foul language insist on re-posting it, word for word, so compounding the felony? It has appeared about 8 times so far (not counting the repetitions of title line) .... but only once by the original poster!

That may be true with some scanners, but with many newer BC or RS
models, sensitivity on image frequencies is *identical* to direct
reception as long as the 800 MHz RF frontend is powered during an
image scan.

No what you are saying is very irrelevant, your congress passed a bill
and your president signed it into law something that says it is now
the law of the land that you cannot interrcept and listen to certain
radio signals! Now even though you feel that if the signals are out
there you are free to get them, you are indeed breaking the law and if
they {the cops or gov't agents} catch you they will steal your
equipment and maybe even prosecute you!

Try reading the post, it said $100 <LESS>, not $100 for the
scanner!!!!, And yes, there is a place in Canada that posts on Rec.
Radio.Scanner, and used to show up on the Ham Radio forum on AOL, that
had some new 2006 left, wanted what ended up to be about $350 or so
with the exchange rate. I haven't seen them run a posting lately, they
may or may not still have some available.
I have sold two as new, mint unmodified 2006's in the last 6 mos for
$300 plus the UPS, and this seems to be the going rate for used.

5725. FS: ERICSSON/GE PCS+ UHF (440-470) HT

I have the following UHF HT FOR SALE:

Ericsson/GE PCS-Plus 16 channel/UHF (440-470 MHz)/Scanning HT. Unit includes 2 standard batteries, 1 Standard Desktop Charger, original box (with serial #, etc.), charger manual, radio user manual, and blank product registration cards. This unit is in Excellent cosmetic and working condition. Is a great multi-use radio for ham, gmrs, business/commercial, and for outdoor outings.

$400 + UPS COD/Shipping sends it to your door.

If interested in this nice unit, please feel free to write me at the following internet mail address:

pm3751s@dunix.drake.edu

Thanks.--

5726. Pro-43 Service Manual

Newsgroup: rec.radio.scanner
Date: 1996-03-23 00:00:00 UTC
From: estabrooks@aol.com
Message-ID: <4j17h2$o9s@newsbf02.news.aol.com>
Source record: 237981

The Service Manual for the Pro-43 states that it is a 400 channel scanner. Look on page 6-7. What gives? Could it be a typo? The Pro-43 is a 200 channel scanner.

BTW: If you ever order the manual, it is a 50 page 8-1/2 X 11 inch booklet. It is actually stapled. It is very informative and has a pull-out of an 11 x 17 inch full
schematic drawing. All parts are described with part numbers.
The code on the manual is "6A3". My 43 is a "7A3". I was able to restore full 800 Mhz without soldering. Thanks to the Pro-43 FAQ.

One other note, if you are using the 43 with full 800 to scan 869-894 Mhz, I
would recommend that you check out the line of cellular antennas from Radio
Shack. They are tuned for that very frequency that you need to listen to the
high end of the 800 Mhz.

Knowledge is attained by making mistakes as fast as possible.

> >>than inventing wild schemes to rationalize speeding, why don't you
> >>just obey the law like a mature adult, and you won't have any problems
> >>with the police.
> >

Hey, these people WANT to speed. They're willing to risk their lives and ours in order to do it. They're willing to risk speeding tickets and even jail time if they happen to kill someone. They're willing to invest their hard earned bucks in equipment that will inable them to violate the law. They're willing to dust off the old "big brother" argument to justify their actions.

Did you really think that a logical argument like yours would sway them? What THEY want is all that matters.

Here in the DC area, the Maryland, Virginia and DC authorities are installing a little surprise for them on the Capital Beltway. Narrow aperature radar cameras will soon be up and running. By the time their little radar detectors buzz, a printer in a data processing center 20 miles away will be printing and mailing their ticket.

It's beautiful in a cosmic sort of way, isn't it?

Bob

>
>thanx
>

Use copper screen under the top of the fiberglass shell.
The screen should be a quarter wavelength in radius at the
lowest frequency that you are interested in listening to.
The ground plane will make a lot of difference in the received signal strength.
The screen should be placed such that the antenna is in the center of the screen,

Illegal or not. They can try to legislate what you are listening to. Unless you are caught red-handed listening to these "private" broadcasts, they can't do a thing to you. Don't admit to doing it....don't brag to your buddies, whether they have rqdios or not....and you can listen to anything you want. The old radio saying that these waves cross your property still apply. You can listen to anything you damn please. Just don't admit to it. Just don't profit by it and if you do just that you can listen to your heart's content.

Radio shack has 1 or 2 units that allow connecting a phone to a tape
recorder and it even turns the recorder on/off.
You didn't say what kind of 'processing' you meant.
The above units could be used as input to an amp.
P.S. Radio shack also has a DSP unit for radio's (sound enhancement), but
a graphic equalizer, passing one side thru the other, on the same unit
will help.
If your interested in voice listen to 500 to 6,000 hz.
The phone system already cuts you down to about 300-4,000 though.

Good reasons to keep the content of posts civil are as follows...
1. Amateur Radio newsgroups end up in many Schools of all levels.
2. Your mothers house is uncensored and I'll bet you don't talk like that to her.
3. It is offensive.
4. Many Internet gateway sysops LIKE MYSELF have to spend an hour or more clearing that trash (on cross postings also!) before posting the news on packet.

P.S. To all others, If you don't like the language then don't use the "reply to" in you reader. It reposts his garbage in your titles which means all of the replys have to be deleted as well.

Thanks for using restraint.

I have to wonder, what in the hell is your problem! Radio Shack sales associates have always attempted to be helpful to me when I have "had a question".

No, their answers have always been correct, but they have always bee worth what I have paid for them, even when I have asked about the Packard Bell computer I DIDN'T but from them.

I do believe, hoewever that they have always tried to answer my questions in a professional way.

I think the problem is that we expect a great deal for free, and it just doesn't work that way.

Secondly, I am also sorry (NOT!) for not being PERFECT like Mr Michael.
I do make mistakes, from time to time. Guess I'm just human. Also, when
I find I made a mistake, I try to rectify it, then make my apologies.
Alexander, did you EVER consider writing your text like this, " Hey Gary,
just wanted to let you know, it wasn't me who wrote the text you quoted
me for, please re-check the note." No, Alexander, guess you simply just
"can't fathom...". Did you mention to anyone that the person who signed
the text in question was also a "Michael"? Gee, that's YOUR name, too??
Why don't YOU try and be observant AND considerate???

Monitoring Times, Feb 1996, pp 24-29 describes a modification called the "Virtual Downconverter" that claims to make the 2035/2042 cellular-capable, It involves minor surgery to the pc board and tuning using the second harmonic of one of the radio's local oscillators. It is *not* simply tuning the 1105-1115 MHz range and picking up cellular iamges. It is also *not* a simple diode clip-type restoration ala the Pro-2006. The article is fairly detailed and the modifications seem relatively straightforward. I have not tried them, though, and cannot vouch for them.

<>

I expect them to have a BASIC knowledge of the products they sell !!
When I go into a Radio Junk looking for a scanner & the droid tells me
"You can't listen to Police calls, it's against the law" I take that
as a hint he doesn't have a clue about anything in the store!!

When I offer a store manager a list of freqs NOT in the Police Call
books & I'm told that if they give it out WITH every copy of Police
Call sold "We'd get in big trouble with the Company", that's another
hint.

When the 2006 service manual I ordered comes in and the droid has to
get the manager to show him how to handle the "order"; "It's paid for,
just give it to him"; and the droid takes it out of the envelope,
throws the envelope away & hands me the loose-page, unstapled manual,
that's another hint they don't have a clue.

I take the pro-43 I just bought, that doesn't work , in for service &
I'm told it'll be back on the 15th. I go in on the 20th, only to
discover that it hasn't even ben sent to the service center yet,
that's another hint.

The above 4 instances happened in 3 different stores in this area, so
it's not a single idiot droid.

When a national ad campaign says "You've got questions, we've got
answers" A reasonable human being assumes the answers will be at
least somewhat coherent.

Anybody have any likely frequencies for tuning the space shuttle in Albany (Dougherty County) Georgia? Local (or semi-local) Ham repeaters that are rebroadcasting, direct listening, whatever works...

I'm running a full-coverage Pro-43 on a fairly decent antenna, so I can probably tune it if you can tell me likely places to be looking that are between 30Mhz and 1Ghz.

Email replies preferred since my newsfeed is subject to fits of non-functionality that sometimes last for days at a time.

TIA!

Dave:

The Radio Shack PRO-51 is a very good scanner, especially at the reduced price!
RS does that from time to time on most high priced items, and sometimes closeouts.

I'd say go for it! Remember, if you aren't satisfied with it, you have 30-days to
return it for a full refund.

August 1995
Law Enforcement Communication Security
By Laura E. Quarantiello
Ms. Quarantiello, a writer in San Marcos, California, has published several articles on law enforcement radio communication.
On every shift, law enforcement officers don equipment designed to protect them from harm during their tour of duty on the streets. Like a knight's armor, each piece of equipment forms a link of protection that, when complete, affords officers the best possible safety from the dangers they will face.
Under their uniforms they may wear tight-fitting protective vests; on their equipment belts, they carry service weapons and handcuffs. Trained to use these tools, officers hit the streets confident in the protective value of their gear. But the weakest link in the department-issued armor may turn out to be the most innocuous piece of equipment that officers use--the two-way radio.
THE LIFELINE
In the early days of urban policing, a blow on a whistle or the rap of a nightstick on a manhole cover was sufficient to summon assistance or transmit information. Officers basically worked alone, with very little need during their shifts to communicate with others in the department.
Today's police officers, however, work beats in a far different world. Their jobs and safety depend in large part on information exchange--a dispatcher giving details of a call for service or coordination among officers during a search for a suspect. This constant need for information can be fulfilled primarily through a voice link. Thus, the radio serves as an officer's lifeline.
Unfortunately, the radio wave that carries an officer's voice to a dispatcher's headset also radiates out into free air. Anyone with a scanner and a little time can tune in easily to the communications of local, State, and Federal law enforcement agencies. Every conversation can be overheard.
WHO IS LISTENING?
Officers using radios often fail to realize that not everyone who hears them is true blue. Though officers intend police communication for internal, department use only, the radio frequencies used to broadcast them can be tuned in by anyone. A quick trip to the local electronics store will prove that the general public easily can acquire the equipment to intercept police transmissions.
Civilians who monitor police radio communication are, for the

most part, hobbyists. They have an interest in the job itself and in keeping track of what happens in their city. The scanner simply provides entertainment. In fact, many hobbyists have become assets to police by calling in tips based on their knowledge of current police activities.

Hobbyists and their scanners do not concern law enforcement. What does concern the police is the increasing number of criminals who use scanners.

A scanner properly programmed with law enforcement frequencies can furnish criminals with a steady stream of information about police activities, including advance notice of everything from routine patrols to drug raids and warrant services. This legal eavesdropping compromises officer safety.

MYTHS AND ILLUSIONS

Officers who believe that their radio conversations cannot be intercepted by others outside of the department live with a delusion. Dependence on the radio link has bred complacency and generated several myths about radio security.

Officers often believe that with so many frequencies in use by their department, the chances must be small that a criminal will be listening to the right one at the right time. In fact, the chances are very good. With today's scanners capable of continuously searching hundreds of channels in seconds, even departments that use many different frequencies are not immune.

Officers believe that using codes and abbreviations prevents civilians from knowing what officers are talking about most of the time, right? Wrong. Commercial outlets routinely make police codes available. With a little listening and some common sense, most abbreviations can be deciphered. While number codes and abbreviations allow for clarity and brevity over the radio, they in no way ensure transmission security.

The biggest myth among police departments might be that 800 MHz (megahertz) radio systems make it impossible for police communication to be overheard. Manufacturers tout 800 MHz trunked systems as scanner-proof, and news agencies have reported that the advent of these systems destroys the ability of outsiders to listen. Nothing could be further from the truth. Trunked radio systems provide a bit of a challenge to monitor, but they also supply many pluses to listeners. With these systems, tactical and car-to-car communications, as well as the transmissions of detectives, now are broadcast over repeaters (devices that amplify and resend radio signals), which extend broadcast range. Even undercover details can be heard clearly.

Officers hold another common misbelief that most conversations over the radio are routine and disclose nothing that a criminal could use to put them in danger. It does not take a full-scale discussion to compromise officer safety. Just a few words, a seemingly minor detail, or a dropped name can be enough. An officer once innocently asked another, "207 David, 356 Adam. I am on the south side. Where are you?" "Second and Grand," responded

the officer, continuing, "I am headed to Madison for a special detail."
Two things are wrong with this 5-second exchange. First, a criminal familiar with local police call signs would recognize that 207 David is the radio call of a detective unit. Second, the detective revealed his destination. The criminals listening in at the drug house on Madison would be packing by now, or loading their weapons.
PRECAUTIONS
Budget cuts and the high cost of equipping police officers often preclude the purchase and use of sophisticated scramblers and other forms of voice protection. In the end, the least expensive and most effective means of employing communication security lies in officers' watching their words. For this reason, officers should take the following precautions when transmitting over the radio.
Stick to the Necessities
The radio is not a telephone and should not be used for casual conversations. Officers should not convey personal or sensitive information over the radio.
Avoid Details That Can Be Communicated Later
Unless the information is urgent to current operations, it can wait. Officers should remember that everything they say can be heard, and they should always question whether they must communicate by radio immediately or if they can talk to the person later.
Use Typed Messages or Face-to-Face Meetings
Mobile Data Terminals (MDTs) provide some security by reducing conversations to typed messages relayed from computer to computer. Though MDT communication can be recorded and stored by the department, outsiders so far cannot decode the transmissions. If at all in doubt, officers should meet in person to exchange information.
Avoid Officer Names
Officers often approach conversations on tactical or car-to-car frequencies casually and use personal names instead of call signs. A wise criminal will learn to associate names with voices and then with call signs, which can endanger officers later when the criminal identifies special operations by the officers involved.
Avoid Unique Call Signs
Distinctive call signs alert criminals to the type of operations being conducted by the department. Departments should try to avoid special number or letter combinations that might tip off listeners to officers' whereabouts or activities.
Do Not Disclose Locations During Undercover Operations
Although officers might find it cumbersome to refer to "the location north of the main drag" or to use other verbal disguises, such tactics will help keep eavesdropping criminals off guard. All movements should be outlined in preliminary

briefings and mapped out prior to the operation so as to reduce the need for radio exchanges.

Do Not Coordinate Special Operations Over the Air

The details of drug raids, warrant services, and other operations always should be coordinated during briefings. Once on the road to the location, radio chatter should be kept to an absolute minimum. All too often, listeners have heard sensitive details, such as the physical positioning of officers during tactical operations, that could place officers' lives in danger.

Use Low-Power Communications

If at all possible, officers should use simplex, low-power communications during undercover details and when transmitting from car to car. Sometimes called "talkaround," these channels do not use the system's repeater and, therefore, are harder to hear.

Use Out-of-Band Frequencies

Listeners know the police radio service bands and scan them diligently, so even communication on a supposedly unknown channel can be found if the channel falls within the range of police wavelengths. Departments should try low-power communications on bands away from the norm. Federal Communications Commission rules1 allow police agencies to operate low-power radios on almost any public safety frequency, provided the transmissions cause no harmful interference.

Avoid Using Cellular Phones for Sensitive Conversations

Officers often attempt to avoid the radio by using cellular mobile telephones. These phones operate in the 869-894 MHz band, and their transmissions can be picked up by most moderately priced scanners. Recent legislation2 makes the manufacture and importation of cellular-capable scanners illegal, but owning such a scanner remains legal.

Officers should make all phone calls from wire-connected telephones. If that is not possible, officers should avoid parking in one spot while using a cellular phone. Driving around takes ad-vantage of frequent handoffs of the call from cell site to cell site, thereby causing listeners to lose the signal.

Do Not Rely on 800 MHz or Anti-scanner Tones for Protection

As mentioned previously, new 800 MHz trunked radio systems do not provide secure transmissions. In fact, they can be overheard easily. Some companies market their systems with anti-scanner tones intended to delay scanning radios and cause them to miss communications. However, users can defeat these tones by making internal modifications to the scanner.

CONCLUSION

The two-way radio has become so much a part of the daily routine that, unlike a weapon, officers largely ignore its potential for harm. Criminals, unfortunately, have realized the benefit of listening to police communications and often use the information gained to avoid discovery and arrest.

Officers' lives might be jeopardized when criminals intercept transmissions and learn of police movements and activities.

Therefore, they always should guard what they say over unprotected radio frequencies, remembering that officer safety begins with a good coat of armor.

Endnotes

1 FCC Rules and Regulations 90.19(g)(3) allows law enforcement agencies to use any Part B public safety frequency between 40 and 952 MHz for surveillance and stakeouts, provided the power output does not exceed 2 watts. Prior approval is required for use of any Part B public safety non-police frequency, such as those designated for fire or highway maintenance.

2 The Telephone Disclosure and Dispute Resolution Act of 1992 made it illegal (as of April 26, 1994) to manufacture in the United States, and/or export to the United States, scanning receivers or frequency converters that are designed or can be readily altered to receive cellular telephone frequencies.

5756. Re: legality of listening to cordless and cellular

Newsgroup: rec.radio.scanner
Date: 1996-03-24 00:00:00 UTC
From: ukfan1a@aol.com
Message-ID: <4j4tmt$1vg@newsbf02.news.aol.com>
Source record: 237811

As I recall, there was an article in Popular Communications about 2 months ago about this. The FCC recently passed some weird reg. that said that listening to cordless handsets was illegal. Notice the word HANDSETS. Since the bases broadcast in the 46.610-.970 they would go right past this reg. Also, FCC law states that 46.000-47.500 is also alloted for government channels that are LEGAL to listen to. Also, baby monitors are legal to listen to, and they broadcast on the same 49 mhz frequencies that cordless handsets do.

Basically, if someone tries to take you to court, it WON''T hold up!

{{{DUH}}} If someone would give you $10 for the correct answer, you'd
have it - and not ask it. What if it is a cordless phone tied to a tree
with a cord? C'mon! The answer is right there without having to wind up
any rubber bands to get the thinking process going!

5762. Re: Any (dis)recommendation on Sportcat 150?

Newsgroup: rec.radio.scanner
Date: 1996-03-24 00:00:00 UTC
From: "Geoffrey T. Cheshire" <gtc@U.arizona.EDU>
Message-ID: <3155BF07.6FBF@U.arizona.EDU>
Source record: 237817

Here's a follow up after a week of use of the Uniden SC150 "Sportcat" and some helpful email:

What I like:
+ Good fidelity through steereo earphones; speaker pretty gppd for its size.
+ Seems to get good reception
+ Decent freq. range: 29-174, 406-512, 806-956 (less cell.) MHz.
+ Nice styling/fit & finish (I have the black unit.)
+ Good backlighting
+ Weather channel scan button
+ Built in NiCad's that charge internally--they last ALL day+ if used with headphones

What I dont like:
- Can't tune in a freq. w/o using a memory
- Number pad not in telephone format
- Can't scan between two freq's of your choosing, only within preset bands
- Lots of intermod, esp. on 800MHz band--all the intereference makes the band hard to scan
- Can't arbitrarily pick presets to scan without lots of locking out of presets
- Internal speaker not really loud enough to overcome road noise in my car (audio is great with headphones)

There are probably more, but this is what comes to mind off the top of my head.

So--in my decision about this radio, can anyone with a BC220/30 let me know how that radio compares? (I can't afford >$300 for the 3000).

As always, thaks in advance!
Geoff

Hi,

Anyone in Tucson able to help out with this one? So far, I've ID'd TPD freq's as:

Channel	MHz
1	155.0100
2	155.7300
3	154.7250
4	155.4900
5	???
6	155.8500
7	154.7550

I can't seem to locate 5. Any help is appreciated. Also, if anyone has DPS, Pima Co. Sherriff, or any other interesting local frequencies, pease pass them along!

Thanks,
Geoff

DS> How would a nationwide mutual aid frequency on which any police
DS> officer could call
DS> any other officer or agency for emergency assistance be made
DS> "obsolete" by any computer network?

It's not. The person posting about the Kentucky Intercity network,
like most states that have the same network, was simply incorrect.

Intercity is point to point only, while the NLEEC channel, 155.475 can
be mobile, base, etc.....

Apples and oranges!

... Catch the Blue Wave!

5769. "the radio spectrum"

Newsgroup: rec.radio.scanner
Date: 1996-03-24 00:00:00 UTC
From: Brian.Petersen@604.sasbbs.com
Message-ID: <bc2_9603242208@sasbbs.com>
Source record: 237824

I have a very large wall poster called "UNITED STATES FREQUENCY ALLOCATIONS, THE RADIO SPECTRUM" which measures approximately 4 feet 2 inches by 3 feet 8 inches. It is a huge and extremely detailed, graphical, colored depiction of the radio spectrum and the services which are allocated to it. It covers from 3 kHz all the way up to 300 GHz. I obtained the thing not too long ago, probably sometime in 1993 or so, and am wondering if anyone out there has a copy of this also? The reason that I am asking is because although I got it around 1993, it was printed in March of 1987. Quite a few things have been changed since then in the radio spectrum world, and I was curious to know if somebody else might have a more recent version of it. The problem is that it was printed by the U.S. Department of Commerce's Spectrum Management Devision under the National Telecommunications and Information Administration. When I originally wrote asking how much it would cost me to get one, it took nearly 2 months for my reply to arrive. I figured it would take the same amount of time just to get a 'yes/no' response if I asked them about a more recent issue. So I figured I'd ask here! :-) Any info would be appreciated. Please reply in e-mail to my address shown below. Thanks in advance.

If anyone out there is interested in this, though, I'll go ahead and give the address to write to in order to obtain it. I cannot remember how much it costed me, but it wasn't very much at all - probably between $5 and $20 bucks. Well worth it in my opinion, and any scanner nut out there who gets his/her hands on it will definitly agree. Anyhow, write to the following address asking about the "United States Frequency Allocations - The Radio Spectrum".

>>band beside some the the UHF television stations?

From what I understand, a good portion of the bandwidth consists of UHF TV stations and media-related studio links in the lower end.

>This band is reportedly supposed to contain military
>"cellular like" telephone comms. I believe there is one
>here is St. Joseph MO at the 135th Signal Batallion
>National Guard, but with my 2006, I have no joy
>receiving them.
>
>Wally Bloss

I have also come across some pretty interesting scrambled transmissions...I'm in Canada, but as Wally put it...probably some sort of military comm.

Food for thought

"I heartily accept the motto,'That government is best which governs least,'...Carried out, it finally amounts to this, which also I believe, 'That government is best which governs not at all'..."

Henry David Thoreau, "Civil Disobedience" (1849)

I have heard the same about the 'renewal' system...

Depending on what you'll be using them for...nickel metal hydride
(NiMH) batteries may also be a good choice. The diff with NiMH
batteries is that they do not have the 'memory' effect that NiCad
batteries develop after several rechargings. You'll see many cell
phones with these batteries as they provide longer life...

Good luck!

Richard Christensen (richard@andes.sps.mot.com) wrote:

: Why does it seem like this "band" is hardly ever included in
: scanners. I bet part of the reason is that it is where the
: up-conversion takes place. But it seems that only the R1, Yupiteros,
: and AOR 8000 can actually scan this band. I assume it is because they
: use a dual up conversion method. If this right? What is on this
: band beside some the the UHF television stations?

Basically, cause UHF TV stations aren't that interesting to listen to. It would increase the cost of the scanner with hardly any benefit to the user. Besides, most scanners don't have wideband FM which you'd need to pick up the TV sound. With the money saved by making the scanner cheaper, you could buy a cheap portable TV and be able to watch AND listen to UHF.

5781. AR 1000XLT info needed

Is this a good scanning radio? I bought one on three day approval and can get a full refund if I return it by Tuesday. It was the "old" demo model that had been bolted to the display since forever. According to the sales clerk it covers from 30 meg to 1.3 gig with no breaks be it was made before "the law" went into effect.
The documentation leaves a lot to be desired and is at the same time somewhat intimidating to me. I am new to scanning and this radio seems somewhat complex. If anyone has any tips or tricks regarding programming, setting up, etc please post/send them to me. Also, how can I get rid of the pre-programmed garbage? (remember, it was the demo model) The manual, and I use the term lightly, makes no mention of how to remove a frequency after it has been stored and I heard that if I use Lock Out on too many frequencies I risk locking up the radio.
Thanks in advance for all the advice.

Mike

I just picked up a BC145XL 16 ch. base scanner at a hamfest... I have no power cord... I'm wondering if someone has one laying around that they could let go. OR I'm looking for a contact phone number for uniden to get info. on ordering... OR i'm looking for a Radio Shack catalog number on what power plug would exactly fit this..... I'm not even sure what the polarity on the jack is. Any information would be greatly appreciated. Please send PRIVATE EMAIL to me, I don't get a chance to read all these messages... thanks again...

I have never claimed to be but I have posted a few Government/insurance sites where data is available that says what I've been saying, SPEEDING IS NOT A TOP TEN CAUSE OF ACCIDENTS!. Depending on the study, speeding is the cause for 1.6-4.0% of accidents depending on whos number you use and what study you look at.

> BTW: That crash I saw last week, it was a 45 MPH zone. The dick that
> was speeding hit the victims so hard that their car was actually torn
> in half. The front with engine and wheels was a good 40 feet from the
> bodies left in the cab.

So, he was speeding, you know this for a fact? Any BAC? Any run red lights/stop signs. Or did you just happen to see this as you were rubbernecking?

> Speeders rule! Everyone should have the right to kill an innocent
> person if they want to. Isn't that what freedom is all about?

How does speeding equate to killing people at will? You have not stated one thing that would even suggest speeding causes accidents. I have some studies, looked at data, and found that speeding is not the evil it is painted to be. Oregon DOT states that 78% of drivers are speeding on the freeway, yet our accident rate has not jumped at all, in fact, secondary roads are the ones with the high accident rates. I'm not saying speed everywhere, but, on the freeway it is perfectly safe to exceed the speed limit, everyone knows it, even the cops.

5784. Forsale AOR2515 base unit scanner

AOR2515 Scanner forsale. $699 new. Recieves 500hz-1.5ghz No blocks. 2016 channels, 10 programable search banks, 3 modes AM, NFM, WFM. Can be operated by computer, thru com port, Decode DTMF realtime, save number dialed, time and frequency. Great for logging bands activity. This radio is in great condition.

I have seen this radio go for as much as twice the original purchasing price. I would like at least $600, this includes everything. (power supply, computer cable, software, antenna for tabletop use) I would be willing to except in trade 2x 2m or 440 HTs. In decent condition. I will pay S/H.

E me...

Ps

See AOR2515.JPG for a look at scanner.

Nobody said that that the author of the profane article was "bad"
nor made any personal attacks in the newsgroups that I follow. Does your
comment reflect YOUR true feelings - that he is "bad"?

1.) Talking and broadcasting are two very different activities. One
usually knows exactly who they are talking to, but not who is listening to a
broadcast. Therefore, a little more restraint is in order for the latter.

2.) He did not just say he ____ed up his transmitter, he said it over and
over again. Not only that but he went into excessive detail about things
that had nothing at all to do with the radio problem to the point of
distraction.

3.) Your only as old as you feel and I feel pretty young.

4.) Compared to other resources, the "net" is more full of chaff than
wheat. Anything we can do to change that is a positive. Did the profane
post elucidate anything for anybody?

Jim

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified section will include Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

I'm very new to scanning. Does anyone know if the Pro51 model from Radio Shack is a good buy at $199.99? It usually lists (in my area, at least) for $319.99. Why such a large markdown? From the information I gathered, this particular model looks good for a first time buyer. And the price is pretty decent? Isn't it?

Any info. is appreciated...

While it's true that San Diego, CA, is the largest S.D. in the U.S. and is probably the one most likely to come to mind when someone sees SDPD (except for readers outside the US), it is NOT TRUE that states don't have police departments. What the heck do you think State Police is? There are 49 state police and highway patrol agencies in this country.

Yeah, this is nit-picking, and I really did know what Steve Work meant in his post, but this crap about "Who is SDPD?" is also nit-picking.

To add to the confusion, I used to be with UHPD and APD, and I'm now with GLAPS and GCSO.

Nope...I ain't gonna explain ;-)

==========
That's very nice, and I'm sure your legislators will like you for it.
However, the idea that the fact that there's a law against something makes
that something *wrong* is faulty (yes, that fact makes that somethine
illegal, but that's different from *wrong*).
Otherwise, the fact that it was illegal for Blacks to use the front seats
on a bus would have been *right*, instead of just *the law*.
Those who transmit in the clear (no encryption) have less reason to expect
privacy than if they were talking on a crowded street corner. The fact
that the law says such conversations are private does not make them so.

5806. Diagram for STANDARD AX700 Scanner needed

Newsgroup: rec.radio.scanner
Date: 1996-03-24 00:00:00 UTC
From: edm@global.co.za
Message-ID: <4j2sto$5t0@dodo.global.co.za>
Source record: 237871
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

Hi there,

Can anybody supply me a diagram-copy for the STANDARD AX700 scanner 50-904 Mhz. This is my own unit. The 2nd PLL goes out of lock sometimes. Carefull tuning the trimcap (very touchy and sensitive) on this module then restores lock again until the next time (days-weeks up to months). In the out-of-lock condition a " machine-gun " sound is heard (most probably caused by "hunting" of the PLL control feedback) only when receiving a signal. It seems to be quiet with no-signal even with the sql. control fully open. The problem appears to be temperature related to some degree. There are a lot of pots on the main pcb, so maybe it just needs a good alignment. I will meet all costs; copy, postage ect.

Thanks Deon

Try and find Ni-Cads with a high capacity.
AA's should rate at 700-900mAh, some cheaper units are
only rated at 500mAh
Or for C or D size, you should get ratings of around 4000mAh,
I have seen cheap D cells with a rating of 1200mAh!

If you can, get Nickel-Metal-Hydryde batteries, the AA cells
should be rated at 1200mAh, I havn't seen D.

TD.

5813. Need Freq. from current database.

Newsgroup: rec.radio.scanner
Date: 1996-03-24 00:00:00 UTC
From: rickcrider@aol.com
Message-ID: <4j32ut$ego@newsbf02.news.aol.com>
Source record: 237878

Hello all:
I need someone with a current FCC database disk or CD-rom to look up a paging frequency for me, please. My database is a Grove version from 1993, and is getting outdated. (Any suggestions on a new current db also welcome.)

Need frequencies issued to 'A+ Communications'.

Depending on your program the parameters you'll need are:

Cities: Charlotte <and> Monroe
State: NC
County: Mecklenburg <and> Union
Licensee: A+ Communications
Frequency Range: <all>

The only ones shown on my database are: 72.02 and 462.800.
I believe they've recently been issued frequencies in the 929->932 range or possibly in the 901->902 range, and maybe others, unknown to me.

Any help on this appreciated. I seriously need to get me an 'updatable' database. Thanks folks.

Cordially:
Rick Crider

I really appreciate all of your help. My PRO-51 says "1 A 6" on the back. I have a sneaky suspicion that if my alter ego tried the mods you suggested, they would not work on my PRO-51. Any other suggestions? You are a gentleman and a scholar. Thanks again.

5815. For Sale: ICOM R-7100 25-2000 Mhz Continous Coverage Receiver (No Gaps) AM, USB, LSB, FM, FM-W, .1 Hz Tuning Resolution (Excellent Condition)

The "feature" you want from the 2035 is the biggest difference between the 2035 and the 2042. The 2042 has been modified in firmware to not store the same frequency over and over again in auto searches. The only way around it on the 2035 is to put the OS535 interface on it (unless someone has figured a way to replace the 2035 firmware with that of the 2042!).

For a good overview of the 2042 and it's differences from the 2035, see Bob Parnass' article in the Feb. 1996 Monitoring Times. Also described in a seperate article is a way to modify the 2035/2042 to rx cellular.

/FLAME ON/

Wow!!!

Why don't you grab your clipboard and head off to the mall to start a petition to stop those bad little press people. Go after those towtruck drivers and cabbies also.

I bet you alone could change the way those nasty news people do business and then the country will be safe from their money grubbing tactics.

I know...you could team-up with that Sheriff in Northern California that tried to get the Department of Justice and the FCC to do the same thing in 1985...remember what they told him????

While you enjoy your little dream....I will be be here with my 10+ scanners listening to them ring like "rigged" slot machines on "speed" waiting for the next "Money Shot".

KA-CHING!!!

Hey I know something even more fun.....
Let's take away YOUR scanner,computer,TV and maybe we can poke out your eyeballs so you can't read a paper....then we can force you to listen to National Public Radio all day!!!!

KA-CHING!

"The pressdudes...united...will never be defeted"!!!!

Nelson says.....

HA! HA!

>That "offensive" subject line, and thread will never go away if everyone
>keeps bitching about it.

Absolutely right! If you are REALLY offended, send a copy of the offending post and subject line to "postmaster@ offending-party's-ISP", detailing your complaints in a concise and rational manner. Point out that the newsgroup in question is one in which such stuff is wholly unexpected and in which young hobbyists participate. With the threat of government involvement on the net, no-one needs some jerk inviting trouble and the ISP may be even more interested. and ask his assistance in correcting the problem. Most ISP's will crack down on an offending user who generates any volume of complaints at all. If you want to get under the offender's skin, just give him a cc of the e-mail complaint to the ISP; it would be the courteous thing to do anyway. Anotehr tactic 9which I do not endorse) is to e-mail back to the offender a copy of his offensive post. If enough unhappy newsgroup participants do this (some guys do it over and over and over and ...) his mailbox will get full REAL soon. But, as I said, THAT WOULD BE WRONG!!!

5822. Re: bincancel:35 large binaries:AR242:@@NCM

Newsgroup: rec.radio.scanner
Date: 1996-03-24 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-242.a@redpoll.mrfs.oh.us>
Source record: 237887
Cross-posted to: alt.retromod,comp.emulators.misc,comp.mail.eudora.ms-windows,rec.org.mensa,rec.radio.scanner,rec.sport.disc

Binary posts do not belong in unmoderated discussion groups.

I run a program that searchs for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierarchies.

I have issued 35 cancels for large binary files (average size 97,700
characters - total size 3,419,530 characters) posted to 6 different
unmoderated discussion groups in the misc, comp, and rec hierarchies
as follows:
17 comp.mail.eudora.ms-windows
13 rec.sport.disc
2 misc.test
1 rec.radio.scanner
1 rec.org.mensa
1 comp.emulators.misc

This pointer is being posted to each affected group listed above,
with the exception of test groups. Follow-ups are directed to
news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, or the criteria that I used to select it, read the full report
in news.admin.net-abuse.announce. Look for AR242 in the subject.
The full report can also be found in alt.nocem.misc and alt.retromod.

If you must post a binary to Usenet, please post it *only* to an
appropriate binaries newsgroup such as alt.binaries.misc, and do *not*
crosspost it to non-binaries groups. Then, if you like, post something
in the appropriate discussion group telling people where to find the
binary in the binaries group (a pointer to the binary). This will
permit news administrators and users to decide for themselves whether
to receive the binary files.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

AOR-1000XLT Super Scanner/Radio
Pre- Cellular Ban Version
Freq. Range; 500khz to 1300mhz Continuous Scanning
1000 Memory
Modes: AM-FM-WFM
This is a great chance to get a radio that does not require a special converter, or a custom internal modification to restore that censored 800mhz band... Not that anyone really listens to that band.<g>
The radio is like new-mint-excellent condition. Very little actual use. Would prefer someone from the Atlanta area, that way they can see it, touch it... smell it if they like. Just so you know that your getting a radio that is in new condition at a fair price. But, If not Atlanta area. I will at least ship this radio to you 2nd day, that way you won't have to wait to use this great pup.

You ask, if it's such a great radio. Then why am I selling it? Courtesy of Blue Cross/Blue Shield HMO, I have some mounting medical bills that have to be paid... like really soon!

What I need to get is about $350 for this radio, so if your interested and can help out. Please let me know. Thanks

btw, this unit has all the original accs. and the box, all in new condition... that you could place it on a shelf an re-sale it?

DasHACKER@AOL.Com (Thom)

Better than Australia's Spectrum Management Agency who charges
$120 for a CD. I questioned them about the exhorbitant price
of these discs and the response I got was "to deter criminals
from listening to police frequencies". What a joke!!! If a
crim is going to spend a few hundred dollars on a scanner, what
makes them think a $100 CD is going to put him off?

These things are all over the web.

I have had the BCT-10 Bear Tracker. It is a good scanner, if you do
not want to program one yourself. It scans about 100 channels per
second very reliablely.

The highway patrol detection is second rate though. In my state, very
few departments use vehicular repeater systems. This is how the BCT10
and BCT7 alert you.

I just bought a BCT7, I hope it is worth the $175.

I found the BCT7 at Radar City, on the web, or $149.00.

>that the law says such conversations are private does not make them so.

I think you took the wrong inflection, I did not intend to support any
law, I was just pointing out that no matter how long or hard he
protested that he had every wrong to intercept a radio signal, our
leaders have said "no, you no longer have that right". I think the law
sucks and the people that pushed it through are not finished trampling
on our rights.

Pretty `nice' gizmo, aint it? {GRIN!} I'd been using one for about a year and
a half before they decided to carry it. {CHORTLE} (I expect that it'll be about
the same length of time before they start carrying the one that fits sunroofs.)
>

>connector on the scanner to the car's ground?
>
Hmmmmm... I've never `thought?' about it quite that way since I've always used
a `lighterplug adapter' to power my radios and I figure that if there *is* a
ground connection being made and used that it came from there. BTW... I have
actually found after playing around after reading your MS that there are a *few*
signals where unplugging the adapter from the radio increased the *apparent*
strength?! (So *maybe?* the `ground' effect isn't all it's cracked up to be?
Oh, well... As Arthur C. Clarke once said, "Any sufficiently advanced
technology is indistinguishable from magic.")
>
>Does anyone use such an antenna for handhelds in cars and experienced any problems?
>
About the *only* `problem' that *I* have is that I sometimes forget that I've
got it hooked up and end up `hanging' either myself or my passenger with the
cable. Or I forget to put my *really sturdy* rubberducky antenna on it. (60mph
can take some of the ones supplied `stock' and lay them over permanently if you
aren't careful. {GRIN!}) *Still* one *must* remember that either the window
mount or the sunroof mount is only a *temporary* setup. A good `permanent' or
mag mount is still the `best' way to go.

Doleo ergo sum,

> phunistl@dfw.net
> http://www.dfw.net/~phunistl

I have been using the BCT-7 in my car for some time. I have many scanners, including the BC-700A and the BCT-2 Bear tracker. The BCT-7 is a combination of these two units. As a matter of fact, I said to myself one day, it would be great if Bearcat would... AND THEY DID! The unit is preprogrammed by state for State Police, Local Police, DOT, etc. There are preprogrammed News services, Weather as well. You may also have a set of 25 "Private Frequencies" that you can program. There is,of course, a lock-out feature for troublesome frequencies. There is a data detect feature, and if you activate it, the scanner will not stop on data frequencies. It covers VHF Low, 6 Meter ham, Aircraft, Federal 137-144, ham 2 meter, VHF-HI, 440 Mhz ham, UHF and UHF - T band, and also 806-956 with pre-programmed steps. Of course, Cellular is blocked out, but an image captures many of those frequencies.
The alert feature works well detecting the HP mobile extenders, but in SC I think the majority of the HP is on 800 Mhz. It was definitely lighting up on my trips through GA.
My use for the unit mainly around town is the private mode, where the local frequencies have been pre-programmed. Traveling works best with scanning for HP. The only problem is that the sampling of the mobile extenders is too long, and makes scanning the local police or HP normal frequencies difficult, because of constantly interupting the transmission. Kind of like Priority mode.
I recommend the scanner highly. A good price is about $140-$160. I have seen them advertised for $140-$250.
Remember that having a mobile scanner may be restricted in some states/localities. Having an amateur radio license offers some exceptions, and I also highly recommend that as well..
Hope this helps!

Scott:

If I could predict that, I'd be rich! Without assuming any liability here, based on how many houses have (or better yet, used to have) roof top T.V. antennas, I'd say your chances are slim of being hit.

You should have your antenna properly grounded! Use a heavy gage wire, (10 GA. would be good), from the metal mast, directly to an outdoor copper ground rod that is driven into the soil at least 6 - 8 feet. Use the shortest rout, and stay away from outdoor gas meters! Then I would invest in a good quality surge protector, and install it on your coax cable. Grove sells these.

In a severe storm, it would still be wise to disconnect the antenna cable from your scanner, and put the end of the coax in a pop bottle, or similar glass insulating device, incase an electrical arc should occur accross the center wire to ground. This way you won't catch your carpet on fire! :)

Lightning is still unpredictable! It hit a house in the neiborhood one time that had nothing on the roof, and blew a hole in it, and caught on fire! They had big tall trees in the yard, and other houses were higher, with antennas, but didn't get hit. Go figure?

5845. *Help!* Weird Problems

Newsgroup: rec.radio.scanner
Date: 1996-03-25 00:00:00 UTC
From: ukfan1a@aol.com
Message-ID: <4j7jsl$shk@newsbf02.news.aol.com>
Source record: 237760

Yes, I have even more weird frequency/noise problems for you hobbyists out there! Last time it was 2-line phones that I discovered broadcast over 46.745, and CB interference on my non-cordless phone.

This time, its different. I have a Panasonic cordless phone/answering machine. We no longer have the cordless handset (DON'T ask me why!) but we kept the base for the answering machine. Anyway, occasionally the answering machine turns on and records (why???) and when you play it back, you get garbled noise and static. I have no idea why this is, if anyone can help PLEASE DO!

Anyway, today it had an extra long message. When I played it back, there was the static, but broken up bits of what sounded to be like a cordless handset conversation (that take place in the 49 mhz band). Anyway, the machine recorded a good part of it.

Why does the machine do this? Do answering machines operate on frequencies like cordless phones? If so, why doesn't this problem occur daily, instead of monthly (I live in a populated area, with LOTS of cordless traffic).

Again, if you can help me, PLEASE do!

5846. Rs Pro-46 handheld

Newsgroup: rec.radio.scanner

I have many times asked questions at radio shacks, mostly about the new
scanners they bring out or on electonics components, And alway get answers
that are way off the wall. I try to nicely tell them that they are wrong and
the correct answer is ----. I've heard on about 4 or 5 different times a
Radio Shack Droid tell a customer that your cordless phone is just as private

at your 'normal' telephone, and your local volanteer fireman across the street with his scanner can't listen in. Or that maga-buck cell phone & service plan - No there are NO scanners that can pick them up, their frequencies are way too high for scanners. At my local rat shack I try to tell them (infact with a handheld scanner I've proved it to them) but they told me "I don't do this for a living, so therefore I don't know what I'm talking about". HAY WAKE UP THE PROOF I WAS RIGHT WAS COMING RIGHT FROM MY SCANNERS SPEAKER!

Actually, people that drive 10-15m.p.h over the speed limit are in the lowest bracket for accidents, because they pay more attention to the road! And that since we have raised the speed limit to 70 on all of our highways, that accidents have gone down by 7%. The fact is that the 55m.p.h speed limit was created back in the Nixon administration to conserve gas because apparently there was a gas crisis. Well, guess what, the crisis is over, and the speed limit has stuck. Our technology has gone beyond belief and we should be able to go three times that limit on some roads. Yes, I really mean that. I'm sick of having to buy radar detectors, beartrackers, and other things. Montana has the right picture. Did you know that 100,000 speeding tickets are written every year? The government doesn't care about accidents, they care about MONEY. They make billions of dollars every year off of us, the tax payers. We can see that the government doesn't care with the invention of Photo radar. Think about it, a drunk driver is cruising along at 80m.p.h, he gets a ticket in the mail 2 weeks later after he has crashed and killed a family.

5854. 12v to phone jack-what happened?

Newsgroup: rec.radio.scanner
Date: 1996-03-25 00:00:00 UTC
From: shawn@intellex.com
Message-ID: <4j81h3$3om@doc.zippo.com>
Source record: 237769

As suggested by the subject line, someone decided to help my father out by charging his scanner for him. They connected a 12v universal adapter to the headphone jack on a Uniden Sportcat (SC 150). I know, how stupid can you be? The jack is clearly marked phone but that apparently doesn't guarantee against stupidity. Anyway, he brought it to me today and said can you fix it?

The scanner seems to operate normally with all the functions working correctly. It still receives the signals and scans just like normal. The problem is the audio. The sound is very weak and somewhat distorted. It sounds sort of like the speaker is blown. I disassembled it to check it out. The speaker looks OK. There are two major boards in the scanner. One board contains the keyboard and display. It has a large shield over most of it. I removed it and examined both sides. It looks OK. The other board has the majority of parts on it. It has several daughter boards attached, as well as the volume and squelch knobs, the antenna jack and the now famous phone jack. On examination, I found a darkened area at the top of the board near the phone jack. In particular there is an area where a surface mount component appears to have been hot and the solder joints looked eroded. I tried cleaning the area and touching up the solder spots. It didn't help.

My guess is that applying power to the phone jack has damaged something in the audio amplifier section, but I couldn't begin to guess what it might be. If you have a suggestion, I would be interested in trying just about anything. I figure to send the radio for repair would cost more that it is worth. Any suggestions?

Sincerely

Shawn Raper <shawn@intellex.com>

Anyone interested in trading a PRO-60 (or perhaps a PRO-26) for a Uniden Bearcat BC-200/205XLT plus some cash? The 200/205XLT has full 800 mhz coverage enabled.

Here's the band plan for the 205XLT:

Mhz Range	Description
29.0-29.7	10 meter "Ham"
29.7-50.0	Low band
50.0-54.0	6 meter "Ham"
118-136	Aircraft (AM)
136-144	Military Land Mobile
144-148	2 meter "Ham"
148-174	High Band
406-420	Federal Government
420-450	70 cm "Ham"
450-470	UHF
470-512	"T"
800-956	800 mhz

200 channels in 10 twenty channel banks
10 priority channels
15 channels per second
liquid crystal display
0.4 microvolt sensitivity @ 29-54 & 136-174; 0.8 @ 406-512; 1.0 @ 800-956
-55 db @ +/- 25 khz selectivity
400mw audio output
earphone jack
slide-on nicad battery pack with external 12 vdc external connector
12 vdc external power supply
rubber ducky (BNC) antenna
heavy duty pseudo-leather carrying case with belt hoop

Interested parties please reply via e-mail to moujesky@why.net.

Thanks.

SB>I posted about this before but got know replie but I have a
SB>PRO-2035 and the AUTO-store feature keeps storing the same
SB>frequency over and over instead of skipping it if it find it again.

I bought a 2035 and mine does the same thing in the Auto-store, so I
think this is a bug, probably fixed/changed for the 2042.

SB>What is the difference between this 2035 and the 2042?

The 2035 is Double Conversion while the 2042 is Triple Conversion.
I bought my 2035 for a discount Friday. I use it to listen to
Airplanes, Trains, DART the local transportation system, and the Weather
which is preprogrammed. I also have the Dallas Police and Fire
programmed. I have 400 frequencies programmed and still have the rest
to find interesting frequencies to program.

Most of the drive-thrus are hard to hit because the wattage of the
transmitters are around .5 watt.

Don't forget Tait Electronics (they do MPT1323 trunked systems), but
only outside of the US due to Motorola's patent on the technology
used in MPT 1323.

I agree - maybe writers of news client programs (such as Free Agent -
the one I'm using) could add kill file facilties to blank out articles
with rude words in them.

I suppose the only problem is it would kill articles with words such
as "Poshitridge" - a village near where I lived in the Midlands..!

This is off-topic but a thought anyway...

I haven't looked - are other newsgroups where the original article was
posted having this conversation? Nice bit of bandwidth and disk
storage used up if they are...

5869. Static and handhelds

Newsgroup: rec.radio.scanner
Date: 1996-03-25 00:00:00 UTC
From: mkilar@newshost.li.net
Message-ID: <4j4vau$ovp@linet06.li.net>
Source record: 237905

Hi All -

I have a couple of handhelds that I'd like to bring with me in the car.
Since reception is poor inside a car, I purchased an RS window clip-on antenna,
(the type which clips on to the window and the window is rolled up to lock
it in place).

Question: Since the antenna doesn't really make a "solid" ground connection to
the car, and the handheld is running off nicads and consequently is not grounded to the car
either, is there a possibility of static build up on the antenna
that could cause serious problems? Should I juryrig a wire from the bnc
connector on the scanner to the car's ground?

Does anyone use such an antenna for handhelds in cars and experienced any problems?

thanks,

mark kilarjian

Just purchased an Icom R1 scanner,and I have a problem.I knew that
this wasnt the best scanner as far as performance was concerned-but it
sure is small.I guess thats the tradeoff.This scanner suffers so bad
from bleed through its almost unuseable for scanning.Tried programing in
a few freqs. for police in the 460mhz range ie 460.35 460.45 460.075
etc. When a trans occurs in one of these freqs the scan will stop even
if its on the wrong one.bleed through.200klh or more
I took the radio back and was told it checked out fine.I've hade
many scanners including AOR ar8000 (great scanner) and have never had
this problem.
Is this scanner that poorly designed--or do I just have a lemon!!!

Thanks

Rick

>business obviously elude you, I'll offer that charities are deductable,
>so it does, nonetheless and in more ways than one, still serve Tandy.

I see... then even though many customers are quite unhappy with the "expert" answers and the 3rd degree at check out time, you are happy cause Tandy writes off charity contributions. Once again, I point out Mr. Manager, Tandy does not do this for the hell of it. They do it cause it don't cost em a dime.

>> Just what "certain practices" are you talking about? Would you admit that f
>> if you paid a decent wage you would get a higher class of sales droid???
>> We pay based upon productivity. In your terms that would translate to
>>"the person who can lie the most and is least stupid." Understand more
>>good now, Arthur?

Nope, your still talking shit. While on terminal leave from the Navy (and still drawing my active duty pay), I thought I would take advantage of my 24 years of electronic experience and see if I could help others while earning a decent wage. In our store we had another Navy guy that quit after 6 years. He had a degree in Advanced Electronics and was extremely competent and productive. We never made more than $4.25 per hour. This was due to the number of people who shared the customer input and the fact that we had to put up stock and all kinds of other duties while the sales per hour slipped away.

The pressure to sell causes some employee's to take sales from each other. I found that anyone who could do ANYTHING else, quit after a few months. It has more to do with having the smarts to see what a no winner working at the Shaft is, than *productivity*. If you think different, you are the dude who has his head so far up his ass, your whole world must be brown.

>Awfully familiar here, aren't we? So much so, in fact, that you seem to

Most people with *real* jobs do NOT work 50-60 hours for $35K per year. Not if they have any sort of skill set. You are quite confused. It is NOT normal to stand on your feet all day for the sort of money your talking about. Can you really live on such a pitance?

>be an ex-Radio Shack salesperson or some other kind of ex-salesperson
>who just couldn't hack it, and now has some sort of twisted vendetta
>against the source of you most embarrassing failure. We're you fired?

My biggest bitch is that Radio Shack really could be a profession vice a minimum wage job. Their would be a place in every town that would benefit from having a store with well paid, satisfied sales staff. Christ knows that merch is not cheap. You can get everything you sell cheaper someplace else. Have you ever wondered why the prices are so high and yet very little money goes to the folks who actually sell the stuff?

>Was your manager really really mean to you because you wouldn't, how
>would you put it, um... "tolerate the way the system tried to exploit me
>and my customers?" Even if you deny it, anyone with an ounce of sense
>won't believe you anyway because your endearing little tantrums just
>tell too much. I'm sorry that you've been psychologically scarred. If
>this outlet works to help you deal with the pain, though, by all means
>continue. Now that I understand, I won't interfere. And if it makes you
>feel better, I'm sure people feel sorry for you.

The sad thing is that the store manager was a very productive and concerned dude. People used to come into the store and search out me and my Navy mate. Our experience with Radio/Computers helped more than a few customers get the stuff they really needed. However, when we both told the manager we found "real jobs" he did everything he could to keep us on. Funny thing, when I went back to see him a few months later, he too was gone.

It's probably frequency inversion. There are circuits readily available
to do this. Look in some of the scanner mags for ads for devices which
do this.

Also, I've heard that if you listen to frequency-inverted speech long
enough, it starts to make sense to you.

: Nelson says.....
: HA! HA!

Well, seeing as how you managed to miss every point I made in my original post, I guess you've proved your bona fides - you're a legitimate journalist all right!

I won't even take the cheap shot that the 'news intelligence' part of your address is an oxymoron or that you can't write anything coherent without the support of the copy desk. Well, hey, I just did - so I lied!

To review: I basically had 2 points, the first being that if we allow scanning for profit (which is what news orgs do, boiled down to the essense) we open the door for the vultures of every variety. How would you like it the next time you had a car wreck, if a lawyer, a tow-truck driver, an ambulance, a cab driver, a funeral director and an insurance salesman all converged on you, smelling fresh meat and ready to pounce because they'd heard of it on their scanner and were allowed to take action on what they monitored. Most of these folks already monitor, but because of the law, they can't be so blatent about pouncing on you.

The main point that you so conveniently ignored, was that if you lie down with dogs, you get dirty, or whatever the cliche is. If you have to go beg your local law enforcement for codes in order to be able to listen to

their traffic, you are effectively at their mercy if you wish to keep your codes. Can you spell K-Y jelly? You're gonna need it in bulk when you make this pact. Print anything negative and those Sabres come back to City Hall for a crypto change and your $4800 investment in radios goes down the tubes.

Do I believe that all scanner laws are sensible and ought to be obeyed mindlessly? Hell no! Do I believe that organizations should provide their own radio security rather than having it legislated for them with some lame laws that everyone should be encouraged to break? Sure do! Do I believe that every now and then one of these laws serves a necessary purpose and actually protects and expands our rights? If you can't answer that one, re-read the above grafs as necessary until enlightenment overtakes even you, grasshopper.

5892. Re: bincancel:4 large binaries:AR244:@@NCM

Newsgroup: rec.radio.scanner
Date: 1996-03-25 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-244.a@redpoll.mrfs.oh.us>
Source record: 237928
Cross-posted to: alt.retromod,alt.radio.scanner,comp.emulators.cbm,comp.sys.mac.system,rec.radio.scanner

Binary posts do not belong in unmoderated discussion groups.

I run a program that searchs for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierarchies.

I have issued 4 cancels for large binary files (average size 192,029
characters - total size 768,118 characters) posted to 4 different
unmoderated discussion groups in the misc, comp, and rec hierarchies
(with cross-posts into alt groups) as follows:
1 misc.test
1 comp.sys.mac.system
1 comp.emulators.cbm
1 alt.radio.scanner
rec.radio.scanner

The cancels in non-targeted groups are an unavoidable consequence of
the way cancels work. A cross-posted article has only one Message-ID.
When it is canceled from one group it is canceled from all groups.

This pointer is being posted to each affected group listed above,
with the exception of test groups. Follow-ups are directed to
news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, or the criteria that I used to select it, read the full report
in news.admin.net-abuse.announce. Look for AR244 in the subject.
The full report can also be found in alt.nocem.misc and alt.retromod.

If you must post a binary to Usenet, please post it *only* to an
appropriate binaries newsgroup such as alt.binaries.misc, and do *not*
crosspost it to non-binaries groups. Then, if you like, post something
in the appropriate discussion group telling people where to find the
binary in the binaries group (a pointer to the binary). This will
permit news administrators and users to decide for themselves whether
to receive the binary files.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

Tandy.

Tandy is hardly known as a great benefactor. As for this "security program," the great "charitable" program that it is, is designed to sell more of Tandy's security systems. If Tandy was not in the business, the program would not exist.

>My employees average $9.00 an hour because they are competitive
and
>competent. I work an average of 50-60 hours a week (as do most
people

This is something to brag about. Real people have lives outside of work and know how to balance work and family. 50 to 60 hours a week is not balanced and if you have to work that much, you'd better be making over $60,000 a year.

>with real jobs) and will always make more money than you will.

That's like saying just because a person quit a job shoveling horse manure for a living they can't cut it and now they have a vendetta. Could it be that the person had more intelligence than the job required? Could it be that they desired to make two to three times more money. Most quit RS because they are tired of "shoveling manure" if you can understand the analogy.

>against the source of you most embarrassing failure. We're you
fired?

My God, over the years RS has fired a majority of their employees. This is not saying anything except they don't know how to develop people.

Tandy's margin have never been thin, they are incredibly fat.
Parts that cost a $.10 sell for $1.00. Speakers that cost $50 sell
for $150. The margins that the store must maintain are 54% or so.
This is not a thin margin. The average clothing store has a 50%
margin or 100% markup and clothing is known to be very profitable.
RS is trying to do better.

>Lynn

Retail is not for me. Hate long hours, poor working conditions and
low pay. But if it is your cup of tea, go for it. As for
competition, they are getting it for Circuit City, Best Buy, Sun,
etc. They were run out of the computer business. Is that success?

There is not innovation in their ham line. Same old stuff year after year. Uniden prices on scanners puts RS to shame. RS is twice as expensive. They are almost a non-entity in stereo equipment. The major brands are a better bargain. If this is success, why is the stock price dropping?

>460.575 St.Paul Fire
>460.625 St.Paul Fire

Also add 460.600 for St. Paul FD - 575 is dispatch, 625 is fire scene,
600 is medics.

PD's use 127.3 for PL. St. Paul fire is 162.2, I think.

Check out my list at http://www.winternet.com/~spk/freq.htm

Seymour Dupa (grumpy@en.com) wrote:
: "If you don't want me to listen,
: keep your signals off of my property."

Something tells me that the screen name is fitting... :)

This view is shared by many but it doesn't carry much weight with me.

The laws prohibiting eavesdropping on cellular and cordless phone conversations are legitimate. Like it, or not. The bills were passed by congress, signed by the president, and so far have held up in court. That's the way the system works under the constitution. So it's all constitutional.

Can the government stop you from listening? Realistically, no. But they can make it more difficult. Prohibiting the sale of certain types of equipment, and putting everyone on notice that - if you are caught - you can be prosecuted.

As far as "keep you signal of my property" claims would work, I can see them being shot down. You see, when the government took over the management and control of radio communications and how the spectrum is used, it can easily be viewed as a case of imminent domain. The government essentially condemned the "airwaves" everywhere within their jurisdiction back in 1934.

The government could probabaly, easily, convince a court that they still have regulatory control over the signals passing through, over, in, or otherwise on your property because it is within the imminent domain.

But like I said - does it keep people from eavsdropping? No. But then again if everyone obeyed all laws (even the laws most of us agree with) we wouldn't have so many people in jail/prison.

5907. FM Radio?

Newsgroup: rec.radio.scanner
Date: 1996-03-26 00:00:00 UTC
From: Tim Catanzarite <prelude@primenet.com>
Message-ID: <4jah4d$58j@nnrp1.news.primenet.com>
Source record: 237593

Does anyone know why on most lower end handhelds they don't include the 88-108 Mhz range? I would like to listen to my favorite stations from time to time when only a scanner is available. Does it have to do with the capibilities of the scanner to only hold a set amount of frequencies? If this is so, then I guess most manufacturers figure customers would rather have ranges not as easily accessed as going to a boom box or your car?

GSS -- The Cellular Infrastructure Group introduced a new family of wireless applications that enable cellular phone users to easily access a wealth of information directly from the Internet and permit Internet users to send information to cellular subscribers. The Wireless Internet Services will provide cellular and new PCS (Personal Communications Services) subscribers with the ability to retrieve information including electronic mail from their home or office computer, current weather forecasts and up-to-date stock prices and sports scores.
/BUSINESS WIRE/

GSS -- The Cellular Infrastructure Group introduced the world's most compact, self-contained CDMA (Code Division Multiple Access) base station which provides full power cell site capability in a package smaller than a standard home refrigerator, offering network operators considerable cost of ownership savings. Designed for the Personal Communications Services (PCS) market, the SC(TM) 604 is a stand-alone cell cite requiring no environmental shelter or forced cooling.

Oh REALLY? I beg to differ! Among my hobbies of scanning and SWL'ing, one of them happens to be CB radio. Feel absolutely free to dig up ANY message that I've ever left on this newsgroup. I guarantee you that there won't be one fowl word to be found within ANY of my writings.

What is the deal with some of you hams having such snooty attitudes about those who use 11 meters? Does the passing of a test in order to acquire rights to a particular band make you superior to those who don't? What type of infallible logic inclines you to spout off with such stereotypical views as CB'ers being merely 'odorous & offensive gutter mouths'? Are you implying that amateur radio is ABOVE that? Need I even MENTION the 147.435 repeater in Southern California? Are they not ham radio operators? Why yes they are! And some of the trash that goes down on that machine 24 hours a day, 7 days a week makes CB'ers look like angels! Now lets re-examine our "who's who" of radio etiquette here.

If your response to this is anything to the tune of "well, those are just a few of the bad apples", mine would be equal. I'm not denying that the citizen's band plays home to a plethora of offensive gutter mouths, but the way you make it sound, every single living creature with a CB mic in it's hand is gutter trash. In my opinion, there are just as many asinine fools on the ham bands as there is on the citizen's band. Perhaps not as many, but it definitely has it's fair share. Maybe that isn't the way the cookie crumbles in your area, but it sure is here in Los Angeles. So the next time you're about to make unfounded accusations about all CB'ers being typical twang tawlkin'

gutter mouths, or whatever it be, please think twice about those who DON'T abuse the band, those who DON'T sit around cussing and swearing, those who DON'T run illegal power with "tweaked" radios, etc., etc., and all of the other things CB'ers are famous/infamous for doing. CB'ers may not be the most polite and warm-hearted people in each and every individual case, but they by far aren't the worst...

>
>Help.
>George.
>

George,

You didn't mention what model # the TV amp is, or on what frequencies the weak signals are that you are trying to hear. I assume you are using the catalog # 15-1113 amp? I also have a 2006 and a RS discone. I suggest it's important to understand the nature of what you want to accomplish.

The 2006 has good intermod and image rejection (in part) for this reason; for every 1 db decrease in sensitivity, you will realize approx 3 db of decrease of intermod and image interference.

Putting a wide-band amplifier inline to hear weak signals on a discone is like putting drag racing slicks on a VW bug! The discone is a great urban antenna because of it's non-gain characteristics. For weak signal work, yes that log periodic is the first choice of many, but having a well heeled wallet is a must.

I use a Grove Scannerbeam, and it works like gangbusters for weak signal work, I listen to military aircraft many miles away on a target range in the desert. It's actually less money than the RS discone. The discone is a good choice for strong local signals, if I were to add a pre-amp to it, I'd have to go with a band-pass amp for the frequency range you wish to hear, or in the case of you hearing "every pager in the county" I'd experiment with a

band-reject filter as well.

What frequencies are you trying to hear? What frequencies are the pagers you are hearing on? Once the interfering frequencies are identified, you can remedy the problem.

I hope this helps and happy scanning,

Jon KF7YN

WH>should be rated at 1200mAh, I havn't seen D.

Toshiba makes the NiMHy AAs, but I have not seen them in stores. From
testing many laptop computer batteries, I can tell you that the
self discharge of NiMHy is much worse than NiCad. The NiMHy are
nearly dead in a week, while Nicads will last a month. Thus NiMHy should
be used on a device that will be used daily. This makes sense for a
laptop computer, but may not make sense for scanners. I find having
several sets of Nicads and a standalone charger the way to go.

I have not seen suggestions of some of my favorites lately...

1. The car magnet-mount. I used a cheapo Kragen mag-mount am/fm antenna (I've had this for years, must have been for truckers..30" whip on a magnet base, with a Motorola plug on the coax) Worked best stuck to a ceiling heater vent, next best was the refridgerator (worked good enough that the fridge NEVER got pulled over by the cops).

2. The RS window special. Radio Shack sells a "remote your ducky" mount that mounts your rubber ducky to a suction cup (whoaaa-not too kinky now..) and gives you 6 fee or so of coax with a BNC plug. At first, put your duckie on the glass, then graduate up to the extendable whip (what'd I say about kinky?) that 'Shack also sells. This setup works so good for me at work that I never changed it.

3. The cheap dipole FM antenna that came with your stereo. (alternately a set of TV rabbit ears) use a cable transformer to change the twinlead to coax, then a coax jumper and adaptor. Not so hot on VHF/UHF, but a good setup for cordless phones in an apartment.

4. (Scraping the bottom) Random lengths of wire, licking you finger and touching the ground side of the BNC, inductive coupling to phone, running an extension cable to the car (be VERY careful-don't want to see the scanner dragging behind the Celica)

Hi Dave,

I have a PRO51 and think it is a fine scanner for the bucks. The $199 price is good, I paid the full price
for mine. I also have a 12A3 and it works with all the key board mods.

I hate to point this out but isnt the above basically the entire VHF and UHF
spectrum? I mean, you might as well scann every frequency on every band that
your scanner covers. Good luck picking out the "bug" signals from amidst all
the commercial repeaters, pagers, hams, etc

From: franzen@fnalv.fnal.gov
Message-ID: <1996Mar26.083349@fnalv.fnal.gov>
Source record: 237713

I have an AOR AR3000 that I would like to sell.

This particular radio was purchased before the cellular exclusion era.

Coverage is from 100kHz to 2036MHZ ---WITHOUT any gaps.
400 memory channels.
Built in clock and receiver on-off timer.
Receiver can automatically bypass up to 48 unwanted frequencies in search mode.
Backlit LCD display.
Can be run from 12V automotive power source.
Auxiliary DIN socket can start automatic tape recording when squelch opens.
Narrow FM, Wide FM, AM, USB, LSB and CW modes.
Computer controllable through a built-in RS-232 port.
Excellent condition, original box and manual.

A new AR3000A which excludes the cellular frequencies sells for over $1000.

Asking price $700

I like this radio, but I dont need it as I also have an ICOM R7100. The
AR-3000 is nice, except
for the sound quality. The sound is underpowered and is delivered through a
speaker mounted
on the bottom of the unit. Using an external amplified speaker makes for a
tremendous improvement.

Sorry, no trades - I need the money for a motorcycle restoration project.

> Help.
> George.

Your best bet would be to either get the antenna further up in the
air and/or improve the coax cable quality if you're stuck with a
fairly long run. Please provide some more details...

As for the amplifier, these TV amps have no automatic gain control
and are notorious for overloading the RF input to the scanner, as
you fuond out. Get the amp as close to the antenna as possible,
not the radio, to ensure you're amplifying the strongest possible
signal. Also make certain the shield of the coax is making a solid
connection at all connectors to prevent any extraneous signals
leaking into the amplifier/cable.

Where are you located and what frequency range and distance are
you trying to receive?
Regards!

> greg

Greg,

The only thing that comes to mind is to use a mobile antenna
hidden on a ledge or window sill. I use a magnet mount with a
cellular 3db gain whip for 800 MHz here and it generally
out-performs my Icom discone on many 800 MHz channels, mostly due
to limited coax length I would expect. Radio Shack sells a magnet
mount wideband mobile antenna that's not bad.

Hi Chuck,

> Anyone have a modification of this scanner to receive cellular?

There would appear to be several ways to "receive" cellular on the
PRO-2035 with success.

EIther look at the GRE "Converter" from Comapnies such as Grove which will
give you cellular "images" around the 400MHz area. Alternatively as
others have suggested a recent MT issue gave details of a modification
that does require some "DIY surgery" and will again give cellular
reception out of band.

The only way however to restore "full coverage" so you can just key
frequencies in "as normal" is replace the main CPU with the GRE-9410
CPU that is fitted to the PRO-2035 (20-9460). It is possible to buy just
the chip (not socketed) or the complete logic board to which it is fitted.
The latter will probably be the most expensive option of all the above but
the easiest.

> offer and advice. Thank you

This was a problem on the early productions of the BC-2500XLT. Uniden
were at one time offering a modification that would reduce the drain to some
degree and also supply an additonal battery pack free of charge.

I beleive later production versions had a lower drain. The earlier models were
also restorable to full cellular coverage in 30KHz steps, this was not the
case on later versions.

Your best bet is to speak with Uniden direct and see what they can help
you with. There "Customer Assistance Hotline" would appear to be
1-800-297-1023

Hope this helps.

Brian Peterson posted about the big poster you can get from the USGPO called "United States Frequency Allocations - The Radio Spectrum".

I did some checking. For example, Cleveland has a USGPO bookstore. They are out of stock on the poster, but they knew of it's existence. They will be ordering up some more (they said they'd even call me when they come in). And, they are only $3.50 apiece. Since they were out of stock, they were not able to look at one and tell me a printing date. Hopefully they are newer than 1987, as Brian observed. The guy on the phone said that they are folded up, but that they are also quite large when you unfold them.

So, if you are near a med-large metro area, look up US Government Printing Office in the blue pages of your phone book, there may be one right in your back yard instead of checking with the main office in D.C.

Mike

Yeah, screw the facts, I'm going with my personal opinion. Gee people are
exceeding the speed limit ONLY 77% of the time. I'll agree with you
there, people HAVE decided what they feel is a safe speed, and they drive
at that speed regardless of the limit.

Okay, agressivley weaving in and out of traffic is called reckless driving, involving improper lane change, unsafe following distance, etc. etc. not just speed. I advocate speeding but not reckless speeding. If traffic doesn't support it, don't speed. When driving in S. Oregon or E. Oregon 80 is perfectly safe. If everyone stays out of the left lane and uses it for passing, then you can keep up a reasonable speed. Lets face it NO ONE does 55, so why is there a limit of 55? It's a joke, it breeds disrespect. In fact 55 was not enacted as a safety measure, it was a fuel saving measure. Sure when 55 went into effect the accident rate went down, but IT HAD ALREADY BEEN GOING DOWN.

> commentary for the USA.

Hmm, like I said before, I sure your scanner is not capable of scanning the cell phone bands and I'm sure you've never modded it. I know that you would never listen to a cell phone because it's illegal. You obey EVERY law rigidly correct? Lets face it, the 55/65 speed limit is a joke, 77% of America disobeys it. Why? Because it's a law that is unneeded, people drive where they feel comfortable. Look at Montana, they got rid of the speed limit all together, average speed before the limit was repealed was 76.8MPH, what is it now? 77.4%. WOW, a whole .6 MPH change. So much for the, "If they raise it to 75, everyone will do 85" excuse. What would you rather have,

a law that no one (even the cops) obeys and breeds disrespect of other traffic laws, or a law that is fair and most people obey. If you have a law that most people obey, the police can target the real offenders(like the person in your scenario #2). Now, it's like Lotto, they just pick cars at random. I have no problem if you want to drive 65, just stay in the right lane, because we all know thats the law and you would never break it.

Source record: 237727

A simple question.

I have 2 UHF radios that a friend gave me. these radios band run from 430 to 439 MHZ. That friend told me that one day he manipulated them so as to receive the cops, the firemen etc. And cops, firemen in France xmit on VHF bands.

So my question is if it possible that these 2 apparently sophisticated scanner radios work on a dual band. Model of the radios is Kenwood TH-415E.

Thanks to anyone who will try to nligth'n.

P.D: if you have the original instructions for these radios, i would appreciate if you could send me a copy.

Bye.

Yes.

I hope you saved the receipt so you could take the amp back. Those
"amplifiers" do a lot better job at amplifying noise and undesired
signals than anything you might actually want to receive. I'll bet only
one in 100 users actually gets any benefit from one.

A better antenna is definitely the way to improve your reception. In
fact, it's the only way.

You should also match the impedence from the amp to the scanner. TV
preamps are 75ohms while the scanner is 50ohms.

5956. Pro 43 charging amperage??

If you read my statement carefully, you can see I was speaking of the trade as a whole entity, not RS in particular...thus the traditional thin margins were a factor in RS going to house branding...

> Retail is not for me. Hate long hours, poor working conditions and
> low pay. But if it is your cup of tea, go for it.

No, I got out of retail some years back....now I am into resturant management..out of the frying pan and into the fire!

As for
> competition, they are getting it for Circuit City, Best Buy, Sun,
> etc. They were run out of the computer business. Is that success?

When viewed on a sku by sku basis, the above mentioned stores do not carry as wide or deep a mix of items as found in most RS stores....Yes you are right about the Tandy computer line....

> There is not innovation in their ham line.

Although I have let computers overtake ham radio for me (WB0YEX), I hear their 2 meter gear is good for entry level stuff and priced affordably....

Uniden prices on scanners puts RS to shame.

Yes,but not as readily available in most markets.....

If this is
> success, why is the stock price dropping?

Hard to say for sure....but I wouldn't sell mine just yet!

From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <4j9nlv$8jc@coranto.ucs.mun.ca>
Source record: 237733

A few years ago EEB made an HF option for the Icom R-7000 called
the NOVEX - FC7100B. It let the R7000 cover from 20 Khz to 25 MHz.
The unit had a off/on/ttl switch, HF connector, V/UHF connector,
TTL connector and another connector with a RCA female jack.
Can someone tell me about this option, how to use it and
it's specifications. I called EEB about it and the said they
still sell it but don't have any information on it. Even
if someone had an owners, it manual would be just what I wanted.

Anyone else have this EEB option for the R7000?

From: zant0001@gold.tc.umn.edu
Message-ID: <zant0001.827896987@gold.tc.umn.edu>
Source record: 237741

I own a BC3000XLT, one of the newer Bearcat handhelds... is it true that the image frequencies found above 1GHz are in fact just as strong as the 800 band itself? If so, why? This seems like a flaw in the radio's ability to actually pick up what it is supposed to at the correct frequencies.

Any info appreciated.

Eric

I don't think law has anything to do with listening to cordless phone
conversations. I for one don't give a damn what goes on in washington.
If they pass a law and I don't think it's right, I ignore it. Sure, I
may get into trouble one of these days but hey, that's my problem.

As for listening to the cordless frequencies, I think it's a matter of
respect not to listen to them. Sure, they are a radio frequency but it
was put there for a convienence. If you talk on a CB or Ham Radio, you
know that others are listening and you know what you can and can not say
but those less informed individuals who buy a cordless don't know this.

I've got teenage kids at home that have gotten into some minor trouble in
the past. Not no more though. I catch them at everything they try to do
because I've been taping their phone calls for over a year. I know every-
thing they attempt. How do you know if your calls are being taped?
Would you be upset knowing this and that someone is listening to what you
said? Think about it. Forget the law and start thinking morals.

I tape my kids to protect them but I don't listen to the neighbors so that
I can look at them differently or find out something that is none of my
business.

To which I would like to add that there are many of us in this newsgroup who do not live in the United States, and to whom the First Amendment is irrelevant. I am, however, aware of the significance of the First Amendment, and would like to say this: The First Amendment is a right, and one which you are justified in seeking to protect. But with rights also come responsibilities. It seems to me that too many of you demand the first without being willing to accept the second. The posting of obscenities in this newsgroup is IMHO an irresponsible act which shows the person responsible up in a very poor light indeed. It is also an insult to the vast majority of decent people who live in the US and who do *not* abuse the First Amendment. Furthermore, every time you post an obscene word, racist comment or whatever, you are handing ammunition to those who want to see the Net more tightly regulated. Ultimately, your actions could bring about curbs on the very freedom you are claiming to uphold. Think about it!

--- END OF SERMON ---

Please, no E-mail or flames on this. It is off topic, but I believe it needed saying. Now let's get back to talking about shortwave radio.

That's certainly one way to go about it (probably the least expensive, since the GRE converter goes for about $80). The other alternative is to install the Opto OS535 interface. You can "unlock" the cell bands with software, or if you buy it from overseas or Canada, there's no need to unlock anything. Obviously, this is only worthwhile if you what you really want is computer control.

I don't have it, but what follows is a post that I saved from a while back
from someone who does have it:

From: eevans@aol.com (Eevans)
Newsgroups: rec.radio.scanner
Subject: OS535 Cellular Unlock Program
Date: 2 Jan 1996 02:02:50 -0500

After much work, I have found out what the unlock code is for the
OS535/Pro2035 combination. I have written a shareware program whose sole
purpose is to unlock the OS535. This would allow the user to then use his
scanning program of choice after running this program. I would appreciate
it if a person or persons would allow me to post it on one of the
modification internet sites.

Thanks,
Eric

Happy scanning

That's exactly what the First Amendment protects, Einstein. It allows us the Freedom to abuse it, respect it, think its irrelevant, hate it, love it, etc.

Obviously, your views toward the irrelevance of The First Amendment, and probably the U.S. Constitution, allow you to make such ignorant statements.

Hey Dan, or Steve, or whatever your name is,

Is this what they teach you up in the woods of Washington State, just a bit north of Prarie Ridge, a little east of Bonney Lake and Puyallup? Did you visit the Michigan Militia for your email tactical training?

Hey everybody, if you really want to hide out, away from the reality of living in the United States of America in 1996, away from drugs, crime, profane language, and newsgroup abuse, then visit Dan and his buddies out in the middle of nowhere, Washington. Just think, you guys could maybe even write your own Constitution. By the way, is Pat Buchanan a member of your little Draconian hermit club?

Don't suggest that people wage cyber war on others, Dan, unless you've got as much spare time on your hands as we do.

Yes, you have to consider the interface and attachment of the Scout to a radio. Grove can take care of you in this department, including sell you a radio already configured for the Scout. I don't think Opto does anything but sell you the device.

Your statistics mean less than nothing to me. The people of the
United States have decided what they feel is a safe maximum speed.
You can live with it, or get the hell out.

>> BTW: That crash I saw last week, it was a 45 MPH zone. The dick that
>> was speeding hit the victims so hard that their car was actually torn
>> in half. The front with engine and wheels was a good 40 feet from the
>> bodies left in the cab.
>
>So, he was speeding, you know this for a fact? Any BAC? Any run
>red lights/stop signs. Or did you just happen to see this as you were
>rubbernecking?

Yes, I saw it happen. Yes he was speeding. Yes I know it for a fact.
No I don't have a RADAR gun, nor do I need one to prove it.
I also know for a fact that the sun is going to come up tomorrow
morning, and I don't need a degree in Astrophysics to know that
either.

>> Speeders rule! Everyone should have the right to kill an innocent
>> person if they want to. Isn't that what freedom is all about?
>
>How does speeding equate to killing people at will?

I can't believe I have to explain this to you. Are you for real? If you have a driver's license, then you should know the answer. I'll explain it anyway.

Scenario 1:
You are driving your car when a deer runs in front of you, causing you to lose control of you car. You wreck into someone, killing them.
--- ACCIDENT---
You were driving your vehicle within the law, safely, and exercising reasonable precautions.

Scenario 2:
You are driving your car in excess of 90 Mph. You are aggressively weaving in and out of traffic. You wreck into someone, killing them.
---HOMICIDE---
Your careless driving and reckless disregard for human life has directly caused someone's death. You are a murderer.

Scenario 3:
(This has nothing to do with cars, but it completes the point.)
You decide to rob a bank (to pay for a new Nitrous Oxide system for your 5.0). You enter the bank, pull out a gun, and announce the robbery. A customer suffers a heart attack and dies due to fright.
---HOMICIDE---
IT MAKES NO DIFFERENCE THAT YOU DID NOT INTEND TO KILL SOMEONE!!!!
This is the part you don't seem to grasp. Your disregard for the law led to some ones death and now you are going to prison.

I am amazed that my original post - that it would be nice for people to obey the law for a change - started a flame war. What a sad commentary for the USA.

>same. Any input would be appreciated. Thanks

I have an AEA ,ACARS (which is their WEFAX demod with new software). I have seen a screen image from the Lowes Airmaster, and it looks identical to the AEA software. I also heard a rumor that the Universal ACARS kit is an AEA with their name on it. THese are certainly all quite similar, if not the same.

I paid $90 for my AEA ACARS at Ham Radio Outlet (HRO). I have had no problems with it, and it has worked flawlessly. I have it connected to a Radio Shack Pro-2026 (or a 2006 sometimes), using an indoor whip antenna. I pick up the aircraft side of the transmissions only, partially because of my antenna, and partially because I am 25 miles away from the closest commercial airport and behind some hills.

> ... rough charging times for batteries.

For fully discharged batteries charged in the PRO-43, use 12-14 hrs
for standard 600 mah Ni-Cads and 20-24 hrs for hi-cap 850 mah.

> ... what the output of the charging circuit is for the Pro 43 in mA?

The circuit in the PRO-43 consists of a 22 ohm resistor, a diode, and
two chokes, i.e. there is no regulation. The unloaded transformer delivers
10.8vdc at the jack and 9.4v measured at the battery contacts (no battery
installed). A discharged battery pack (600 mah) yielded 5.25v unloaded.
During charging from the supplied xformer, the following currents and
voltages were measured at the battery terminals -

600 mah .1 hr 54ma 6.5v 850 mah .1 hr 43ma 7.4v
.5 hr 50ma 6.9v 1 hr 39ma 7.7v
1 hr 44ma 7.0v 10 hr 34ma 7.7v
2 hr 43ma 7.6v 16 hr 34ma 8.1v
20 hr 30ma 8.1v
10 hr 30ma 7.8v 24 hr 32ma 8.3v
12 hr 31ma 8.0v
14 hr 29ma 8.0v

There is nothing worng with your radio. The R1 is a piece of junk!
You can minimize this problem by signal attenuation at the antenna. Try
making an antenna out of a connector and a paperclip. If you can buy an R1
for less than $200, it is a great novelty. The R1 sold new for $500. I
belived it has the worst price versus performance characteristics of any
radio ever manufactured.
Icom should have been ashamed!

This says a lot.
Unfortunately, it doesn't say anything nice about you.
===

>I've got teenage kids at home that have gotten into some minor trouble in
>the past. Not no more though. I catch them at everything they try to do
>because I've been taping their phone calls for over a year. I know every-
>thing they attempt.
===

Really nice. I'm sure they respect you for this.

> How do you know if your calls are being taped?

I don't care. I don't say anything I'd be sorry for over my cordless
phone.

>Would you be upset knowing this and that someone is listening to what you
>said? Think about it. Forget the law and start thinking morals.

No, because I'm smart enough to know that, regardless of the law, there
are people out there who listen, and I take that into account.
Did you know some parents actually tape their kids' phone conversations?
These are the same people who would listen to my cordless phone.

>
>I tape my kids to protect them but I don't listen to the neighbors so that
>I can look at them differently or find out something that is none of my
>business.

You tape your kids to protect them? Gee, I wonder why you can't just trust
them. Maybe they don't trust *you*. I wonder why.
Maybe they are taping *your* phone calls.

6000. What are the Docking freqs for Shuttle-Mir? (Not SAREX freqs)

Newsgroup: rec.radio.scanner
Date: 1996-03-27 00:00:00 UTC
From: bd703@scn.org
Message-ID: <DowM56.FqI@scn.org>
Source record: 237614

Some time ago I came across a suggestion that 121.75 FM was used to
communicate between shuttles and the Mir station during docking/separation.
Can anyone confirm this and advise if there are any other NON-AMATEUR freqs
used for comms between the two spacecraft.

Thanks in advance

Kerwin

MI>scanner have any disadvantages over a base scanner? Can anybody tell me a
MI>reason why I shouldn't buy this one, or does anyone have a suggestion for
MI>a better scanner?

MI>Thank you in advance

MI> Miklos

There is no better choice for a handheld scanner. You have alphanumerics
and a data port.

Some base stations have better filters than do handheld scanners. The
AR3000A is a much better scanner than the AR8000, but costs nearly
double. It has better sensitivity and no intermod. The AR5000 has
the alpha and data features of the AR8000 (plus more), but is too new
to tell as far as quality goes. Note the AR3000A has no alphanumerics,
but can be easily run with a computer.

I bet that clouds things up just fine!

The reason is simple!

If you buy a European PRO-26, it will NOT step in 30 Khz increments.
Remember that the USA cellular channel spacing is 30 Khz. You will have to
set it for a 5 Khz step and hit the serch button more than you would like.

> They sell mail order as well as in many electronics parts stores and
> surplus stores. I've bought a number of different kits from them,
> and they all work as well, or better, than advertised. I wish I could
> say the same thing for some others.

I have a PRO-2001 *and* a Ramsey 800MHz converter. They make a good
pair.

I am using the 2001 as a dedicated trunked system scanner. The
push-button lockouts are ideal for quickly locking out the wandering
data channels. The separate UHF input also allows full usage of the
VHF bands while using the converter.

BTW, does anyone have the schematic for the 2001? I would like to look
into speed-up, loop filter and delay mods. As well as a general
tune-up. Which would be better: SAMS photofacts or the Tandy service
manual? (if available).

=== A few notes on the Ramsey SCN-1 800MHz converter =====

The circuit is very basic with "okay" sensitivity, but I wouldn't
recommend it for DX'ing the 800MHz band! However, it is fine for local
reception. A cellular phone antenna works great. Be warned: The output
contains a very large (about -3dBm) 400MHz LO signal that may
overload, cause images in, or de-sens some receivers. (Note: the input
and output are not isolated, so the 40-400MHz LO RF energy will make
it's way to the receiving antenna)

Some Tips:

1. Buy some "right angle" BNC connectors. The kit comes with RCA phono
connectors!

2. The oscillator that comes with it may cause some problems. The
oscillator is a standard 40MHz TTL crystal oscillator module. The
square wave output is multiplied 10 times to obtain the 400MHz L.O.
The module I received was 1KHz off frequency, which shifted the output
signals over 10KHz, enough to cause scanning problems. I replaced it
with a *80MHz* module and some socket pins. Now the error is less than

2KHz. The 80MHz module seemed to give better results (a cleaner LO signal) and a more accurate LO signal.

3. The power supply to the multiplier & mixer circuit is not regulated and perfomance/sensitivity varies with supply voltage. You may want to trim the supply voltage for best reception. This will make the biggest difference in performance. Try adjusting the supply voltage while receiving a signal. Mine seems to work best on 8.35V.

4. I also placed some 0.1uF ceramic chip bypass caps at some strategic places. Mostly this cleaned up the LO signal. The specific spots were:

a. The supply side of L5 to top ground plane (you will have to scratch away the green solder mask).

b. At the +5V supply pin of the oscillator to bottom ground plane.

c. The supply side of R1 to top ground plane (cleaned up LO).

d. Solder all leads that pass through both ground planes on each side.

5. Clean up the multiplier signal. If you have access to a wide bandwidth scope, connect the "antenna" output to the scope input with a 50 ohm terminator. The signal level should be around 200mVp-p. *Gently* spread apart, or squeeze, L6,7,8 & 9 and adjust them for the cleanest looking 400MHz signal. They will interact, but just adjust them for the nicest looking 400MHz signal (there will be "lumps" every 5-10 cycles). The actual signal level is not too critical.

6. The board is rather big for the size of the circuit it contains (10.5cm x 12cm). It definitely should be built in a shielded case (it does generate a lot of RFI). I would recommend one of those cast aluminum cases for good RF shielding.

Wadda' ya expect for $50!

SW> : image scan.
SW>
SW> Aren't we talking about the difference between a radio which "cannot"
SW> receive cellular and one which was modified by adding a switch to
SW> enable image reception?
--
I guess my understanding of your comment above was that ANY image
reception is by default less sensitive. However when removing a
component or cutting a wire to restore cellular reception, and then
comparing direct signals with image signals, many RS and BC scanners
show no difference at all.
Of course that comparison can only be made in dual conversion designs
since in triple conversion receivers the image is frequently received
in a much lower band, necessitating some form of modification first
to activate the higher 800 MHz band for comparison. In that case,
without the mod, images are definitely less sensitive. Perhaps this
is what you were referring to.

>boom box or your car?

1. Adding FM broadcast would require an additional wide IF filter, since
scanners are set up for narrow-band FM reception.

2. Many scanner designs put all the images and birdies in untuneable
frequency ranges. Restoring them may not give satisfactory coverage in
those areas.

6022. Radio Shack Model Pro-2037

Newsgroup: rec.radio.scanner
Date: 1996-03-27 00:00:00 UTC
From: Acoustic1@gnn.com
Message-ID: <4jbog6$6ut@news-e2b.gnn.com>
Source record: 237636

Are there any kind of Modifications that can be made for the Pro-2037?

Thanks.

The first amendment of the Constitution of the United States gives individuals they right to sat whatever they want without fear of criminal prosecution from the government. It in no way protects individuals from being criticized by other individuals for what they say or how they express themselves. The poster of the original article stepped out of the bounds of accepted "netequitte" and was properly criticized for it. Learn something about the Consitution before you appeal to it to excuse your lack of manners.

It is not illegal to listen to cordless phones, but it is illegal if you tape
it without their permission.

From: hay145@aol.com
Message-ID: <4jbsf0$bm0@newsbf02.news.aol.com>
Source record: 237640

If you buy a European PRO-26, it will NOT step in 30 Khz increments.
Remember that the USA cellular channel spacing is 30 Khz. You will have to
set it for a 5 Khz step and hit the serch button more than you would like.
Yuck :(

Jim Wayda
Captain, Scanner Price Police.
(Bookum Danno! The charge is scanner price gouging)

I'd say you were a bit off the mark Capt Jim.

I have the UBC-3000XLT that I just search in 5KHz steps just fine, in fact
superbly IMO.

From what I know on the PRO-26 if you try to listen to the Images (with or
without) the "jumper" mod mentioned you still have to search in 5khz
steps. The PRO-26 like my 3000 does not have 30KHz steps so regardless of
USA or European models in this respect does not matter. It would seem
logical to have something that just has the full coverage to start with.
It did to me anyway when I was looking at the PRO-26/BC3000 & UBC3000

YMMV.
Harry

Wow, R.G., you are really amazing. I'm sure that all of the members of the alt.radio.pirate newsgroup are really impressed by your investigative skills. For your next trick, maybe you could show us all how to jackoff and type at the same time.

Maybe you could hook up with our buddy Dan Morisseau in Washington. His number is (206) 752-1847. I bet you two would hit it off instantly.

Most handheld scanners typically don't have the tight electronic specs that you will see in an equivalent base unit, simply because compromises have to be made in performance as a tradeoff for the smaller, portable size. However, I have an AR8000 and am completely enamored by it. The performance is more than for what I need, and since I am out and around a lot, I like it's portablility. If you go with a base unit, you will soon want to go out an buy a handheld scanner anyway. If you like the AOR line, consider the new AR5000 base unit. My handheld AR8000 winds up being my base or "in-home" unit, and is my only radio. I can plug it into a speaker for bigger sound if I want. If you have a decent hand-held you really don't need a base unit. A base unit is good if you have a ham shack and you want it part of your collection of radios on your shelf or radio rack, or if you have an RV and you want to install one permanently in the vehicle (many base units are 120 and 12V capable).

With the AR8000, I see very few disadvantages over a base unit. The AR8000 has features that put it above most base units anyway (in my opinion... please don't flame me everyone!).

One word about the AR8000. It's crammed with features (and almost all of them useful), so to the new scanner hobbyist it can a lot to learn (the AR8000 is my third scanner, and it was a lot for me to learn). You essentially have a hand-held computer-driven radio (and you can actually connect it to a computer if you want). My point is that there are gobs of advanced features that you may not need right away, so don't be intimidated by the apparent complexity. The radio has a nifty feature where you can set it up in either NOVICE or EXPERT mode. This keeps you from fouling something up accidentally until you get to know your way around the radio.

I hope you get the AR8000. Sit down with the manual, and go through it page by page, but DON'T do it all in one sitting, you'll get a headache. It took me about a week spending an hour or two after work with the manual before I

got through everything. If you try to do it all at once or try to jump ahead you will confuse yourself and become disheartened by the whole affair. I have heard of people returning the radio because it wound up being too complex to learn - that is the downside. But, once you learn it you don't forget it becuase it is laid out so well. It winds up being a very easy and convenient to use radio once you get the hang of it.

I would also recommend getting the gray leatherette case from Grove. It takes the abuse not the scanner. The clear plastic keyboard cover on the case also makes it easier to use. You'll see what I mean when you try to enter a couple hundred frequencies without the case, then get the case and use the buttons.

You might also consider getting a decent scanner antenna (Grove sells the famed Austin Condor, I have a Diamond RH77CA 8-bander ham antenna). The little plastic carrot that comes with the AR8000 is nice and compact, but it is not real sensitive and makes the radio somewhat deaf.

Have fun.

Mike

>boom box or your car?
====
Nope, it has to do with a few things...
Most low end hand-held scanners don't have Wide FM,which you'd need for BC
FM reception.
Most scanners don't have stereo capability, which even an El Cheapo FM
receiver will have.
Sooo, no BC FM capability on most handheld scanners.

>I sure hope I have them for DAYTON.

>Jeff

Hi Jeff,

AOR has actually started to catch up some on the backorder situation. We received a shipment today but it realistically won't cover even half of what we have committed to dealers. The problem was with the supply of some of the components of the AR8000. AOR was more than happy to increase their factory production to meet the demand, but some of their parts suppliers could not increase production quickly enough. I am fairly sure that the parts supply problem has been remedied at this time so now it's just a matter of catching up on the outstanding backorders. I would think that before the end of April we will be to the point where dealers will have stock in the stores again.

Re the AR5000, the FCC approval is still pending but we should definitely have stock before the Dayton Hamvention. The type 15 FCC application has been submitted but the FCC is also requiring a submission for computer peripheral acceptance on the unit, so it may be a little while longer.

See you at Dayton.

I never experience bleedover on my R-1 so I wonder if something is really wrong with yours. I do not think the radio is a Piece of junk as stated by a self appointed price patrolman. It is not as good as it could be performance wise and I would never reccomend it as a primary receiver, but it also has it's merit. Mine does get overloaded when it is hooked to an outside antenna but I never have the need to do that as it picks up signals from 25+ miles with the supplied duck antenna. I purchased a 6db attenuator from radio shack and when I am in a situation where RF is a problem I put that on and it helps. All radios have good and bad points.

>Thanks in advance.

If the date code is before April 1994 (4A4) then it can probably be modified.
Mine was 11A3 (November 1993) and restored fine.

It is a dual conversion receiver, and is prone to overload and images in high
RF environments, but otherwise is a nice little mobile scanner. When on sale
($149), it is a steal.

While this goes against the purpose of me reading this group :) If you are into scanners, point your web browser to:

http://www.perconcorp.com/

Also the best way to get a list of the base freqs is to buddy up to the base frequency manager. Government freqs can also be obtained through the Freedom of Information Act upon making the correct applications. Just as a guess I would search from 130 to 175 MHZ... (if you have a scanner with search mode). Sometimes you can get an idea of the freqs that the folks use, by looking at the ant on their cars or LMRs. Long antenna's usually mean low freqs. The shorter the antenna to higher the freq. Course with base loading it can be pretty hard to tell. If you have E-Mail, but no web services, just drop me a note and I will research the percon data base for ya...

Hi. Does anyone have any pointers to a FAQ or other source of detailed info on trunked systems? I would like to understand the different control channel formats, etc. (no, I am not particularly trying to scan them [since I don't have two scanners], but I would like to understand them better than I do now). References to papers, textbooks, FAQs, web pages, text articles, etc. would all be appreciated.

Thanks,

-Kyl

: It is not illegal to listen to cordless phones, but it is illegal if you tape
: it without their permission.
: --

It's also illegal to repeat what you hear.

I've heard that it's OK to tape what you pick up on a scanner as long as
you don't play the tape for anyone else. But remember that cordless and
cellular are "special" cases, the usual scanner laws don't apply.

6049. Legality - Cordless, Celluar, etc

Newsgroup: rec.radio.scanner
Date: 1996-03-27 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <4jcbsd$nim@usenet.srv.cis.pitt.edu>
Source record: 237663

As far as I'm concerned, the laws don't mean much to me. I follow a golden rule that has never crossed me - I follow my own morals. What I feel is right and wrong. Despite what laws are or are not in effect. Just because a law exists doesn't mean it has morals to back it up - Laws don't always come in to effect because of morals. For instance, a speed limit of 55 once was in effect for most of Pennsylvania's highways. Now would you saythat most people exceeding that 55 mph limit are immoral? Yes, they could kill people. yes they COULD cause thousands of dollars worth of damage. but then Pa. changed the majority of its highways to 65mph. Now has exceeding 55mph all of a sudden become immoral? Now is 65 mph a moral speed? I don't buy the association between morality and legality in some cases. Now I'm sure I could come up with a decent number of activities that are indeed immoral (in my opinion) that are illegal also.

As far as cordless and cell phones go, there should be no expectation of privacy. Everyone that owns a phone Im sure realizes that air waves/EMR can be monitored. I remember being taught about EMR yrs and yrs and yrs ago ...And if they haven't paid attention to their environment or their instructions over the years then I can hardly feel sorry for them. I feel no pity for ignorance.

As far as monitoring cordless and celluar goes, as long as You do it in the privacy of your own home/car/fairly private location and don't benefit or pass on the information you learned I don't feel that any harm has been caused. Does the monitored party know they've been heard? No. Does the GVT/police know you've monitored them? No. Now, the question is posed, do I want to be monitored on my phones? No, of course not but I realize the potential exists for abuse and conduct myself accordingly on wireless communication devices.

Next issue. privacy. Is privacy a right? Are there any laws that make privacy a right? Yes. One or two. Not many. Should it be a right? Yes. I think so. However the only true privacy you can have, the only true right that you can guarentee is one that you create yourself. By using landlines. by using encryption. Can landlines be tapped? Yup. Can encryption be cracked? Yup. But that cuts down drastically on the monitoring rate. Is it entirely private? No - all we can do is try to lower the percentage, the chance of being monitored.

ahh well. Responsible replies welcome.

Keith

I do find it interesting, though, that once I've been in a Shadio Rack a
couple of times, that I get the absolute worst service. The attitude is
something like, "He knows what he's looking for, just leave him alone...he'll
find what he needs..., etc.". I don't know if it's good or bad, but it
happens time after time. I suppose they know that those of us with a clue are
there for a reason and will simply ask or tell the sales droids what we need;
the walk-ins (aka clueless) need attention and direction...dunno.

..could just be me...

Well the scanner will have no problem picking up the signals, but you better brush up on all the languages in Europe because they have a built in scramble (unless you understand the language, you will not understand what they are talking about)

I am taking my AOR1500 with me to Austria, but I imagine I will only understand the International broadcasting stations, the VHF, UHF conversations will be in German, I dont speak German. So it might as well be scambled for all I care...

Yes, I think you are right.

Anyone have experence with the Create Log Pero. Ant? I now have a Discone,
will I see a big different? There is a big price difference, but if I get a
far better antenna I don't mind spending $200+ on the Log Ant.

Thanks
George

Mike, and anyone else snooping in ... :-) Yes! We have a local USGPO
branch here in Los Angeles. I gave them a call and was disappointed to
learn that the March 1987 version is in fact the most recent version.
But oh well, the 1987 issue is more than enough for me, and I'm sure that
anyone out there who's into radio hobby would die for this wall poster.

> I usually find fast food resturants in my area in the 29-54 Mhz range.

Hi Paul,

most the ones that I found in my area are also on the VHF-low band, but
in past few monthts I've found that serveral Fast Food joints have move
to the 496.xxxx (Speaker) / 464.xxxx (Clerk) range. All of those headset
had a visible antenna. The McDonlds that I came across the other day had
headset manufactured by "GM" and no visible antenna. I can only assume
that they are on 806 - 825 Mhz / 851 - 870 Mhz range or the 902 - 928 Mhz
range.

It's possible that these headset are infrared, but I've only heard about
those in the UK.

Here's a series of URL's that contain Fast Food frequency lists:

6063. 2030 MOD

Newsgroup: rec.radio.scanner
Date: 1996-03-27 00:00:00 UTC
From: davew2879@aol.com
Message-ID: <4jctj4$on0@newsbf02.news.aol.com>
Source record: 237677

Does anyone know if the pro-2030 can be modified to pick up freqs in the
200-400 mhz range?

6064. FS/TRADE: My PRO-43 for your 16ch. desktop + CASH

Newsgroup: rec.radio.scanner
Date: 1996-03-27 00:00:00 UTC
From: cobra295@aol.com
Message-ID: <4jcuqi$p4d@newsbf02.news.aol.com>
Source record: 237678

*** UPGRADE YOUR DESKTOP SCANNER TO A PRO-43 ***

LOOKING TO TRADE MY PRO-43 w/ ACCESSORIES FOR YOUR BASIC 16CH
DESKTOP SCANNER OR EQUIV.

I'm looking to trade my PRO-43 for a Bearcat 16, 18, or 20 ch. desktop
scanner (or something along those lines). My PRO-43 is in excellent
condition... very good receiver on it. It receives all cellular (in
proper
steps). I have box, manual, antenna. Plus, I have the six rechargable
batteries. I also have a DC cord for 12VDC mobile use. I also have the
AC
adapter for home use which also is used to charge the batteries. Scanner
has
only been modified for cell. and keypad beep delete by myself. Fully
functioning/working.

In exchange, I'm looking to downgrade to a scanner similar to what I have
mentioned above, plus cash of course. Reason for doing this? I find at
this
point everything I
listen to on the scanner, I can fit into 16 or so channels or I can listen
to
it on my ham
radio. I really don't have a use for cell, 220mhz, etc. anymore, I just
need
to scan
a few favorite frequencies. The traded scanner must be in very good
condition, physically, electrically, etc... must have stock antenna.. must
have power adapter...

Serious traders please reply via private email only and maybe we can work
something out. I will deal w/ anyone in the 48 states. I'll require a
postal money order and shipping via USPS. I will ship out same day I RX
your
scanner. Email for more details and with your scanner's info. Thanks...

Sean, N2ZJJ

6065. FS: Pro-51 almost new $170

Hi George. You will notice a big difference with a directional antenna,
but realize you will have to rotate it for maximum signal strength.
Thus, a rotor and a scanner with an S-meter are essential. If the
paging tower direction from your location is perpendicular to the
direction of the beam, you're in luck. The attenuation is maximum at
that point. If it is in the same direction as your desired signal or
directly opposite (180 degrees), you still may be bothered by paging
signals.
A word on amplifiers-if you use one, use one that mounts on the antenna
mast, with the control circuitry in your scanning position. Grove in

Brasstown, NC sells one, as well as several other businesses. If you place the amplifier right at the scanning position, all the line noise from the coax run will be amplified along with the desired signal. The amplifier signal to noise ratio will be best with the amp at the antenna.
Unfortunately, the amp may still cause the paging signals to overload your receiver. A tuned circuit filter for the paging frequency would definitely help. Again, Grove sells one of them also. This is not an advertisement for Grove, but of all the magazines I get, they seem to have the stuff I need.
Good luck and hope this helps!

Hi Paul,

most of the Fast Food resturants in my area are also in the VHF-low band.
However, in past few months several have moved to the 469.xxxx (speaker)/
464.xxxx (clerk) range. All of those headset had a visible antenna and
a transmitter that that clipped onto a belt. The McDonalds that I'm
talking about had headset manufactured by "GM" with no visible antenna
and a transmitter on the headphone. I can only assume that they are on
806-825Mhz / 851-870Mhz range or 902-928Mhz range. It's possible that
these new headsets are infrared, but I've only heard of those in the UK.

Here's a list of URLs which contain list of Fast Food Frequencies:

6068. GEnie's Radio Group

Newsgroup: rec.radio.scanner
Date: 1996-03-27 00:00:00 UTC
From: MailMan@ix.netcom.com
Message-ID: <3159cf42.18104817@cloner2.ix.netcom.com>
Source record: 237682

Hello all:

If you are a member of Genie's excellent radio forum, you may want to reconsider their service. The "helpful" operators of GEnie have changed all of the $8.95 acounts to $18.95 accounts that have 9 hrs of access rather than 5.

When all of the other services are increasing the value for each dollar spent, GEnie courageously bucks the trend and slips one in on its members.

The Wednesday night roundtables with other scanner folks were great, but Genie is just not worth a buck less than unlimited access on Netcom.

Later,

Mail Man

>to rig up anything better?

You didn't specify what frequency but this one works great on lowband and fairly well through 400 MHz. From my archives......

An easy way to improve your 30-50 scanning experience is to make a 10 foot dipole (468/frequency in MHz = length in feet, so 468/46.8MHz which is in the cordless phone base band, equals 10 feet) out of Radio Shack speaker wire (24 feet of #42-2478 on page 23 of the 1994 catalog). Also, get a RCA to BNC adapter. Take one end of the wire and cut off the BNC, leaving a few inches of wire on it (you'll use it later). Take the 23 feet or so of wire and seperate the cut ends about five feet apart so that it stretches ten feet end to end. Mount this dipole on the wall, ceiling, or somewhere up off the ground. You may find slightly more signal strength if you mount it vertically. The rest of the length is so you have plenty of wire to run from the antenna to your scanner. Of course, if you need a longer wire run, use the 50 foot wire. Since 30-50 is a pretty low frequency, cable losses are minimum. You'll be amazed at the improvement in low band performance from this inexpensive antenna. Now, for that other BNC end piece you cut off, seperate the wires until you have about three inches of wire on each side. Use an ohm meter to determine which wire is the center lead. Completely cut off the ground wire and leave two or three inches of the center conductor wire. Get another RCA to BNC adapter and you have an average antenna for cellular and more importantly, a good antenna for very strong signal situations where a regular antenna gives you overload. Since this short antenna is almost worse than a rubber duck, it is ideal for use at concerts, finding wireless mikes, etc. without picking up other interference.

Well, you could say it's a lemon by design! ;-) That's why the scanner
price police frequently chide people for trying to sell them for $400-$500
here on the net.

Sorry to hear you have joined a large majority of unsatisfied R1 users. :-(

>
> : | Albert Nurick

Hey Al, you're entitled to your opinion. But evidently, you haven't been reading this newsgroup very long. My comment about RS is kind compared to some of the other stuff seen here. And it's not like RS hasn't earned it either.
I grew up with Radio Shack in the 60's back in Houston, Texas. They were fun, the catalogue was free, and the salestaff were actually knowledgeable. Compare that description to what you get from Roid Shock now: The store is frequently boring and stuffed with low-quality junk, the catalogue costs $3, and the salesdroids have a doctorate in Bullshit.

Don't get me wrong, RS is still good for various parts. But their best years are clearly behind them.
Cheers, Ron Cain

Dave:

It is going to be discoed pretty soon. I have been trying to order
some for the store I work at. (I know radio shack has a bad rep but
they are paying for my tution for school) According to the records I
have it is out at my regional wherehouse. That and it has been on sale
for the last 6 months for that price. So get it while you can. It is a
great scanner. I think they are trying to move them because they are
easy to be modified.
Good luck
Bevan

Hi Todd,

I think I found one of the McDonalds near me on 920.0250 Mhz for the
speaker.

It's opening for business this weekend, and they just came online today!

I'll try and get the headset frequency this weekend when they open for
business.

I'm not sure what the McDonals in Gaithersburg, MD is on, but I'm sure
it's
somewhere in the 920.xxxx range for the speaker.

I'll let you know when I find it.

Thanks for the help!
Bob

6080. VHF-HI base antenna

Newsgroup: rec.radio.scanner
Date: 1996-03-28 00:00:00 UTC
From: COMITA@IX.NETCOM.COM
Message-ID: <4jeu4r$8e8@dfw-ixnews3.ix.netcom.com>
Source record: 237447

I currently use a radio shack VHF-HI/UHF scanner antenna mounted on my roof to monitor the local railroads in my area. What I am looking for is a good antenna for my roof that I can cut to the 160.000mhz length to improve my reception. I have a moble antenna which was cut to the 160.000mhz length and that did wonders for my reception in my truck. I can't seem to locate antenna stock and antenna bases anywhere near my home. Any help would be great.

6081. Re: Wanted: Space Shuttle VHF Frequencies

Newsgroup: rec.radio.scanner
Date: 1996-03-28 00:00:00 UTC
From: D Stark <dstark@frontiernet.net>
Message-ID: <315B5AAD.3862@frontiernet.net>
Source record: 237448

The list as posted is misleading.

> VHF-band 145.840 Mhz (Voice)

Amateur radio downlink (SAREX).

> UHF-band 243.000 Mhz AM (Emergency Voice Channel)

It's there because they have to have it. Chances of
actually hearing the shuttle on this frequency, even during an
emergency, are pretty slim.

> UHF-band 259.700 Mhz AM (Primary Voice Channel)
> UHF-band 279.000 Mhz AM (EVA Voice Channel)
> UHF-band 296.800 Mhz AM (Backup Voice Channel)

These frequencies are sometimes tested with Houston at
some time during a mission, but their main use is for close-in
communications onboard the orbiter at very low power.

> UHF-band 416.500 Mhz (Data)
> S-band 2217.500 Mhz (Data)
> S-band 2250.000 Mhz (Data)
> S-band 2287.500 Mhz (Data)
> C-band 5400-5900 Mhz (Data)

Most shuttle voice communications are multiplexed onto the
S-band TDRS signals. Part of the "Data" mentioned above is actually
digital voice and video.

> Mir Space Station Downlink Frequencies
> ---
> VHF-band 143.625 Mhz (Voice)

This is probably a good frequency, but bear in mind that the
Mir cosmonauts are probably going to be speaking in Russian on any of
their space program channels.

> VHF-band 145.550 Mhz (Voice & Packet Telemetry)
> VHF-band 145.800 Mhz (Voice)

Amateur radio again.

Not sure where you got that! Maybe a state law. The Federal Law now
states that it is illegal to listen to cordless phone conversations
unless you are a party to or have permission from the parties to the
conversation. Untested in court, to my knowledge, but nevertheless the
law of the land.

The company your are probably looking for is, Durham Radio Sales in Canada. They have brand new PRO 2006's, in the box, already modified for cellular for $379 +S/H and duties. I think the faster scan mod is also done for you. Total cost is usually about $420. They also offer 2nd day air shipping.

Their WEB page is http://www.durhamradio.ca/

I did have the phone # but can't find it right now. If it's not on the WEB page and you can't find it let me know and I will do a more thorough search.

One of the things I used to like about ham radio was the careful use of language that allowed hams to discuss the same things the other radio services were discussing, but with a touch of class. The topics were the same, the the choice of words permitted discussion on "family" channels and in "mixed company" without offending most listeners. Not so for the choice of words in the original post, and follow-ups in this thread.

I think your on to something here. I also just read an interesting
fact. Cigarette smoking is actually good for you after all! Yes, it
appears that the coughing that habitual smokers do clears out their
lungs. The cancers that they get cause them to see doctors more
frequently than non-smokers, they tend to get more checkups, and
therefore live longer than non-smokers.

> There's a nice three input mixer shown in the ARRL handbook. It's designed around a LM386 op-amp. The circuit is basically a summing amplifier. I built one and it works quite well. The output level won't knock your socks off as is, but by adding another op-amp as an audio amplifier will give you plenty of volume. The whole thing takes only a few hours to build and all the parts are avail. at Rat Shack.

look for the micro uc-1514 in the lower right corner (with text on micro facing so you can read it normally) there will be 3 surface mount resistors (also just down from a 4 pin connector (cant tell from the picture)) remove 2 of the resistors closest to the micro "carefully" (in case this doesn't work). You're not done yet, now take 1 of these resistors and install it into a empty pad about 1/4 of an inch below the resistor that you didn't remove. This resistor will be oriented 90 degrees from its original position. Also note the empty pad is on right the side of the radio and one side of the resistor will be on a ground trace. Another reference point is the lithium battery located below the micro.

Hope My instructions are clear enough. If you like Ill try to scan an image of the picture. Good luck

This is difficult to do with passive circuitry because the signal from one radio cannot be allowed to feed back into the output amplifier of another. I can think of two ways to do this:

First, the output of each radio is fed to a high-value resistor (2-10,000 ohms). The opposite end of the resistors are tied together and fed to an audio amplifier that drives the speaker. Of course, this requires that power be applied to the mixer. If it is desired to separate the signals so that only one radio is heard at a time, some type of logic circuit would also be required.

The second method would work by sampling the output of each radio through a low-value resistor, say 20-50 ohms, and feeding each sample to a rectifier and filter. The output of each filter would drive a sensitive DPDT reed relay. One pole of the relay would connect the output of the active radio directly to the speaker, the other pole would be wired in a way to lock out all the other radios. There would be a *slight* connect and disconnect delay due to the filters, but this would be a totally passive system.

Unfortunately, I can't remember seeing any devices like this on the consumer market. You might try a commercial marine supply house. Larger boats often have multiple radios, so this may be a more common request in that industry.

Best of luck,

Jack WB3U

> Can it be modified?? Wuz told YES + NO??? Plse

The above details would suggest and unfortunate No.

The definative way to tell if you have a (U.S.) purchased PRO-43 is
modifiable or not is look at the FCC code on the back. This gives it away.

FCC Code of AA020-300 = Modifiable
FCC Code of AA020-300A = Non Modifiable.

Date codes are are not really a good way to determine "modificationability"
as there maybe PRO-43's in circulation that originated outside the
USA (without FCC ID's) with Date Codes into 1995 but versions with the
FCC codes as above run true to form.

A PRO-43 FAQ is regularaly posted to this group, the last time on the
8th Match I beleive (Message-ID: <Dnyp0I.AqG@world.std.com>)

In article <397_9603250537@woodybbs.com>, Clint.Bradford@228.woodybbs.com says...

>What have YOU done for the amateur radio community lately?

This is the scanner newsgroup. Just because we recieve, why do you think we would be interested in transmitting? If you like to scan the police, fire, and medical bands, you do not need to do anything for the amateur radio community.

>Your lame anti-Tandy sentiments do nothing for the betterment of the
>amateur community.

I have not read any lame anti-Tandy sentiments. IMHO, Tandy brought the comments to themselves with their LAME TV/Radio Ads claiming they have the answers to our questions. ** NOW THAT IS LAME !! **

>When is your Ham Radio Test Class scheduled - using your local Radio
>Shack location? How many flyers have you placed in your local Radio
>Shack - touting your Club's activities in the area?

Not the slightest bit interested in taking any Ham Radio Test. No radio shack store in my city does anything for the Ham community, quite the inverse, for 30 pieces of silver, they will sell Ham transmitting equipment TO ANYONE with money...

>You complain that Radio Shack salespeople aren't educated - what are YOU
>doing to help in that cause?

What would you suggest? The corporation is NOT interested in any type of training that IS NOT directly SALES oriented. These guys have no need to understand or appreciate anyone's hobby. They make about $5.00 and stand on their feet all day (30 mins for lunch (without pay) is the big break of the day).

>Probably just sitting on your butt typing, adding absolutely nothing for
>the betterment of the hobby.

Sorta weird to stand up and type, but I will give it a shot and see if it does anything for the betterment of my butt.

>Stop wasting valuable conference space and time. Do something for your
>community. THEN report back to the group.
>clint.bradford@atdbbs.com
>member "brown-watch"

And this post is a valuable use of space? My comments are ESPECIALLY a waste of bandwidth, but at least I am well aware of it. My comments are for

educational reasons only. I love to respond to Radio Shack Managers, these dudes have yet to see the light.... They are the only ones who could push the corporate crap up hill. As long as they are happy with the system, then they will promote it till it dies. I have no problem forcasting the end of Tandy Corp. In the mid 70's they came out with one of the first home computers. Complete with trash-dos (TRS-DOS) that was developed by some company called Microsoft. The way they forced users to upgrade ONLY through their stores, and lack of 3rd party support was designed to put the communities money ONLY to them. They then spent millions on computer stores world wide, only to be shoved to the ground when consumers found "real" computers at a very reasonable price. Tandy will eventually die off to some sort of catalog company. With Fed Ex and other overnight services, Tandy would be better off selling off all their stores and by using the Internet, let people browse products and order direct.

End of droids, end of managers, etc etc.. Remember you heard it here first!

Dr. Pharter

> I guess it depends on your requirements then. I use NiMH in my PRO-43 (VARTA brand NiMH) which *I* prefer over the Nicads. The NiMH may discharge faster when not used, but I get a longer use out of them and the scanner goes on charge every night so it doesn't matter. I was lucky to get 8 hours out of the Nicads, between 10-12 on the NiMH. As a backup I have a set of Alkaline ready to go if they NiMH ever run dry. Alkaline are the best way to go, but *I* believe not worth the cost.

Read 18 USC 2510 and 18 USC 2511 for details on what
MIGHT happen, if you were caught.

Look in the 3/26/96 edition of the Jackson [MI] Citizen Patroit,
about a Jackson County sheriff deputy that monitored someone's
cordless phone call(s) and then arrested her.

Re: Shuttle frequencies,

There are about 150 frequencies I've seen Re: *"Top Secret Registry of US Gov. Freqs)", (just counting those below 300MHz). In Los Angeles, we are very lucky to have Main Shuttle Audio Feeds, from JPL Space Labs, patched into two ham repeaters (one VHF and one UHF).

The above frequencies include 'chase planes', a few shuttle links, airport control, ground support, security vendors and on and on.

As most know, VHF/UHF communications, for the most part, are line-of-sight and therefore, most channels listed would yeild nothing...

Having said all that, try:

Shuttle: 259.7 and 296.8MHz.

Aircraft & Ships: 148.22, 163.1, 168.35, 231.0, 240.4, 240.6, 240.8, 241.0, 241.2, 241.6, 242.0 and 256.2MHz

Soviet Space Program (voice): 30.008, 39.986, 89.10 90.023, 121.625, 121.7 142.175 142.40 142.60 142.144, 143.625 143.825 165.00 183.538, 183.538MHz

* I would highly recommend the above book for sensitive federal stuff... get it from GROVE. The above frequencies are just a SMALL sample of listings, just for NASA! Name a federal agancy, 'It's in there'! Military stuff too.

I mentioned 'chase' frequencies, but that's in another publication I've misplaced! Sorry. I'll post a follow-up message when and if I find it.

Can't we stop this ridiculous thread once and for all?

Is it legal to listen? No!
Does anyone care? No!
Is it enforceable? No!
Do people listen anyway? Yes!

Will people stop listening and remove all their cordless and/or cellular channels from their scanner memories just because some do-gooder on rec. radio.scanner scolds them for listening and tells them that it's illegal? Come on people, get a clue!

APCO-25 digital trunked and conventional systems and protocols are
described in documents published (and available for sale) by the
Telecommunications Industry Association (TIA). The documents are in
IS102.XXXX or TSB102.XXXX series. Some overview information about APCO-25
is also available from the APCO web page at http://www.apcointl.org/

Mitchell, first take a look at the processor. If it is labeled 1514 or
1514A the mod will work. If it is 1514B, the mod does not work. I had
an 890 and tried to mod the unit to no avail. Fortunately, the store
took it back.
Good luck!

>it NO ONE does 55, so why is there a limit of 55? It's a joke, it breeds
>disrespect. In fact 55 was not enacted as a safety measure, it was a fuel
>saving measure. Sure when 55 went into effect the accident rate went
>down, but IT HAD ALREADY BEEN GOING DOWN.

Everyone on the other side of the law thinks that the law is wrong and
they are right. Visit your local prison and you will find all of the
residents echoing your points. It means nothing.

>> Scenario 3:
>> (This has nothing to do with cars, but it completes the point.)
>> You decide to rob a bank (to pay for a new Nitrous Oxide system for
>> your 5.0). You enter the bank, pull out a gun, and announce the
>> robbery. A customer suffers a heart attack and dies due to fright.
>> ---HOMICIDE---
>> IT MAKES NO DIFFERENCE THAT YOU DID NOT INTEND TO KILL SOMEONE!!!!
>> This is the part you don't seem to grasp. Your disregard for the law
>> led to some ones death and now you are going to prison.

>>
>>
>> I am amazed that my original post - that it would be nice for people
>> to obey the law for a change - started a flame war. What a sad
>> commentary for the USA.
>
>Hmm, like I said before, I sure your scanner is not capable of scanning
>the cell phone bands and I'm sure you've never modded it. I know that you
>would never listen to a cell phone because it's illegal.

There is no comparison between listening to the radio and killing
people. Not even the same ballpark. And if you feel the law is
wrong, you have two choices. Lobby to get the law changed, or live
with it. You think the law is a joke, I don't.

>law rigidly correct? Lets face it, the 55/65 speed limit is a joke, 77% of
>America disobeys it. Why? Because it's a law that is unneeded, people drive
>where they feel comfortable. Look at Montana, they got rid of the speed
>limit all together, average speed before the limit was repealed was 76.8MPH,
>what is it now? 77.4%. WOW, a whole .6 MPH change. So much for the, "If
>they raise it to 75, everyone will do 85" excuse. What would you rather have,
>a law that no one (even the cops) obeys and breeds disrespect of other
>traffic laws, or a law that is fair and most people obey. If you have a law
>that most people obey, the police can target the real offenders(like the
>person in your scenario #2). Now, it's like Lotto, they just pick cars at
>random. I have no problem if you want to drive 65, just stay in the right
>lane, because we all know thats the law and you would never break it.

Oh, It's OK with you if I obey the law, as long as I don't get in your
way. Well thank you very much for your generosity! I don't recall
asking your permission to drive the speed limit. BTW: The speed limit
applies to both lanes and it is a MAXIMUM limit, not a MINIMUM. A lot
of people make that mistake.

I equate the reckless driver in scenario 2 to all speeders. All
speeders think that they are the one person in the world who can
"handle it". I have never heard of anyone saying "I think I'll drive
real fast and crash tonight." It is logical to assume that the people
who crash do so because they are not able to control their vehicles.

Considering my recent acceptance, and visitation weekend in the near future, I was wondering if there were any Boston College students (or others in the Boston area) who know of interesting frequencies to monitor relating to the school/operations. I have a good list of public service frequencies in the Boston area so I'm primarily looking for BC info.

Anything would be great. Thanks,

I have my Pro-2026 installed (properly of course) in a 1981 Toyota Corolla, and haven't experienced ANY ignition noise! Just make sure that the DC power is connected to a MAJOR power buss that comes directly from the battery, not a small wire that also provides power for interior lighting, fuel pump, or cigarrette lighter! Also make sure the ground connection is REALLY to GROUND! It can be hard to tell sometimes, with all of the plastic and insulators used to keep car interiors "quiet" (rattle and squeak free!).

The date code on a small white sticker tells you when the unit was made. Only the numbers are meaningful. Mine was 11A3 (November, 1993) and restored fine since this is prior to 4A4 (April 1994). Get the picture?

Steve

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend

reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two

companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions contain selected business listings, too, although callsigns are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees,

listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about

$100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall

security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an

outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $27.00 per year, which includes the monthly Scanner Journal, approximately 50 pages in 8-1/2" x 11" format. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

All meetings are held on Saturdays at locations announced in advance. The next few meetings may be held at the Destiny Restaurant, on Rand Road, in Des Plaines, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and
larger book stores for under $13. Police Call is basically
a computer printout of FCC license information in the fire,
police, local government, and conservation services in two
lists: by licensee name within state, and by frequency.
Later editions have included a few pages of local airport
and nonsensitive federal government frequencies. The 1996
edition contains selected business frequencies, too, but
callsigns are listed only for local government and public
safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local

agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information

fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 50 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542
Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto

terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s]

missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Abstract

This article contains product review summaries for more
than 60 old and new scanner radios and monitor receivers.
Other topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other
radio hobbyists. This article describes a few of the FM
receivers in my collection, and is not meant to be
complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had
sellers look me square in the eye and tell me their radio

worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat | base scanners, see "Tips for Fixing Bearcat Scanners," by | Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Grove Enterprises (Brasstown, NC) and Radio Shack repair scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are | "unrepairable" and carving the letter "U" on the cabinet. G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which

crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency | and Electra (Bearcat) built most of the scanners in their | Indiana and Puerto Rican factories. Uniden, a large | Japanese electronics company, purchased the scanner product | lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat | BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO- | 2006, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and | older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews of these recent scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable |

Note: Reprints of Monitoring Times articles are available for $2.00 each (plus self addressed stamped envelope) from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this $2.00.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs

of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard

allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very

fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like

case. Slide-on NiCd battery pack. |

BC220XLT (Uniden): 1995 vintage. Very good 200 portable | scanner which is a smaller successor to the BC200XLT. | Includes 800 MHz band. 10 priority channels. Service | Search, including WX. Up to 10 frequencies can be locked | out during conventional search, 20 frequencies from Service | Search. Unique feature tells whether a given frequency has | already been memorized. 10.8 MHz and 450 kHz IFs, with | images 21.6 MHz away. 4 cell BP-120 internal NiCd battery | pack. Marketed as BC230XLT with two BP-120 battery packs | and CRX-120 dual charger. See "The BC220XLT/BC230XLT | Portable Scanner," by Bob Parnass, AJ9S, in Monitoring | Times, April 1996. |

BC230XLT (Uniden): See BC220XLT.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the

scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1985 vintage. Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times,

August 1995.

PRO-62: 1984 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the

common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. For
more information, see "Add a Crystal Receiver to Your
Arsenal," by Bob Parnass, January 1996 Monitoring Times.

BK>ready to go if they NiMH ever run dry. Alkaline are the best way to go, but
BK>*I* believe not worth the cost.

BK>Brett Kollar
BK>bkollar@maui.netwave.net

I don't doubt the NiMH will last longer, but NiCads are very very cheap.
I am using a set of 800mah AA I bought for $1.50 each. Note also that
the internal impedance of NiMH is higher than NiCad, which is why the
power tool market still is using NiCads. I don't know off hand what the
impedance difference is or how it will effect the usable scanning time.

BTW: Alkalines have at least twice the capacity of Nicads, but three times
higher impedance. Thus, use Nicads in your photo flash if you want to
recycle quickly. You can go nuts studying this stuff. Trust me.

RS>rsaco@aol.com

I have found this to be true also, especially if you want to
receive shortwave.

For UHF/VHF, something like the Comet miracle baby or Madol ripoff
of the Comet works surprisingly well, and you don't look like a
scanner geek since it is so small.

"Best" is a relative term since not breaking your scanner by
having a flexible antenna seems pretty good to me.

Well, the ECPA didn't say anything about image frequencies, did it? What are they going to do next, mandate that every scanner not only not pick up cell frequencies directly, but also mandate that cell frequencies be suppressed by 120db or more at every possible image? After all, you aren't supposed to be able to listen to them at all. Why don't they just make it a rule to make it totally impossible to listen. It won't make the scanner that much more expensive to have those extra filters put in, will it?

I found the New Cannan police department at 45.7000
According to POlice Call 1995 edition , Stamford police can be found
at these frequencies ...

39.0200
39.3400
39.4600

These seems to be a bunch of trunk frequencies allocated for Stamford
too ..

>James.

To avoid breaking the law, dont do this...

Short out the contact on the phone between the two battery
terminals to the negative battery terminal. (This can be done
easily by bending out the middle terminal on the battery to
about 30 degrees, then pushing the battery straight on the
phone without sliding it, just put one edge in first, then push
the other edge, and it will snap on)

Now power on the phone, and numbers should be flashing on
the disply in the centre pin is making contact correctly with
the recessed center pin on the phone.
Press #08#, this un-mutes the speaker.
Now press 11xxxx# where xxxx is a 1 to four digit number
corresponding to the channel you want to listen in on. (1-1023)

>Shawn Raper <shawn@intellex.com>

My guess is that the speaker (and subsiquently the phone jack)
is 'AC' coupled to the audio amp' circuit, and connecting DC
to the jack has damaged the audio output coupling capacitor.
Check the capacitors around where the speaker/phone-jack wires connect
to the PCB, you may see a capacitor with a bulge in the top
of the can, or with the can pushed off, or on an angle.

Here is the law... excuse the formatting... it was beyond my
control that free agent messed it up.

* UNITED STATES CODE
o TITLE 18 - CRIMES AND CRIMINAL PROCEDURE
+ PART I - CRIMES
+ CHAPTER 119 - WIRE AND ELECTRONIC
COMMUNICATIONS
INTERCEPTION AND INTERCEPTION OF ORAL
COMMUNICATIONS

 2510. Definitions

As used in this chapter -

* (1) ''wire communication'' means any aural transfer made in
whole or
in part through the use of facilities for the transmission
of
communications by the aid of wire, cable, or other like
connection
between the point of origin and the point of reception
(including the
use of such connection in a switching station) furnished or
operated
by any person engaged in providing or operating such
facilities for
the transmission of interstate or foreign communications or
communications affecting interstate or foreign commerce and
such term
includes any electronic storage of such communication;

* (2) ''oral communication'' means any oral communication
uttered by a
person exhibiting an expectation that such communication is
not
subject to interception under circumstances justifying such
expectation, but such term does not include any electronic
communication;
* (3) ''State'' means any State of the United States, the
District of
Columbia, the Commonwealth of Puerto Rico, and any territory
or
possession of the United States;
* (4) ''intercept'' means the aural or other acquisition of
the
contents of any wire, electronic, or oral communication
through the
use of any electronic, mechanical, or other device.
* (5) ''electronic, mechanical, or other device'' means any
device or
apparatus which can be used to intercept a wire, oral, or
electronic
communication other than -
o (a) any telephone or telegraph instrument, equipment
or
facility, or any component thereof, (i) furnished to
the
subscriber or user by a provider of wire or electronic
communication service in the ordinary course of its
business and
being used by the subscriber or user in the ordinary
course of
its business or furnished by such subscriber or user
for
connection to the facilities of such service and used
in the
ordinary course of its business; or (ii) being used by
a provider
of wire or electronic communication service in the
ordinary
course of its business, or by an investigative or law
enforcement
officer in the ordinary course of his duties;
o (b) a hearing aid or similar device being used to
correct
subnormal hearing to not better than normal;
* (6) ''person'' means any employee, or agent of the United
States or
any State or political subdivision thereof, and any
individual,
partnership, association, joint stock company, trust, or

corporation;
* (7) ''Investigative or law enforcement officer'' means any officer of
the United States or of a State or political subdivision thereof, who
is empowered by law to conduct investigations of or to make arrests
for offenses enumerated in this chapter, and any attorney authorized
by law to prosecute or participate in the prosecution of such
offenses;
* (8) ''contents'', when used with respect to any wire, oral, or
electronic communication, includes any information concerning the
substance, purport, or meaning of that communication;
* (9) ''Judge of competent jurisdiction'' means -
o (a) a judge of a United States district court or a United States
court of appeals; and
o (b) a judge of any court of general criminal jurisdiction of a
State who is authorized by a statute of that State to enter
orders authorizing interceptions of wire, oral, or electronic
communications;
* (10) ''communication common carrier'' shall have the same meaning
which is given the term ''common carrier'' by section 153(h) of title
47 of the United States Code;
* (11) ''aggrieved person'' means a person who was a party to any
intercepted wire, oral, or electronic communication or a person
against whom the interception was directed;
* (12) ''electronic communication'' means any transfer of signs,
signals, writing, images, sounds, data, or intelligence of any nature
transmitted in whole or in part by a wire, radio, electromagnetic,
photoelectronic or photooptical system that affects interstate or
foreign commerce, but does not include -
o (A) any wire or oral communication;
o (B) any communication made through a tone-only paging device; or

o (C) any communication from a tracking device (as
defined in
section 3117 of this title);
* (13) ''user'' means any person or entity who -
o (A) uses an electronic communication service; and
o (B) is duly authorized by the provider of such service
to engage
in such use;
* (14) ''electronic communications system'' means any wire,
radio,
electromagnetic, photooptical or photoelectronic facilities
for the
transmission of electronic communications, and any computer
facilities
or related electronic equipment for the electronic storage
of such
communications;
* (15) ''electronic communication service'' means any service
which
provides to users thereof the ability to send or receive
wire or
electronic communications;
* (16) ''readily accessible to the general public'' means,
with respect
to a radio communication, that such communication is not -
o (A) scrambled or encrypted;
o (B) transmitted using modulation techniques whose
essential
parameters have been withheld from the public with the
intention
of preserving the privacy of such communication;
o (C) carried on a subcarrier or other signal subsidiary
to a
radio transmission;
o (D) transmitted over a communication system provided
by a common
carrier, unless the communication is a tone only paging
system
communication; or
o (E) transmitted on frequencies allocated under part
25, subpart
D, E, or F of part 74, or part 94 of the Rules of the
Federal
Communications Commission, unless, in the case of a
communication
transmitted on a frequency allocated under part 74 that
is not
exclusively allocated to broadcast auxiliary services,
the
communication is a two-way voice communication by

radio;
* (17) ''electronic storage'' means -
o (A) any temporary, intermediate storage of a wire or
electronic
communication incidental to the electronic transmission
thereof;
and
o (B) any storage of such communication by an electronic
communication service for purposes of backup protection
of such
communication; and
* (18) ''aural transfer'' means a transfer containing the
human voice
at any point between and including the point of origin and
the point
of reception.

* UNITED STATES CODE
o TITLE 18 - CRIMES AND CRIMINAL PROCEDURE
+ PART I - CRIMES
+ CHAPTER 119 - WIRE AND ELECTRONIC
COMMUNICATIONS
INTERCEPTION AND INTERCEPTION OF ORAL
COMMUNICATIONS

---

§ 2511. Interception and disclosure of wire, oral, or electronic communications prohibited

* (1) Except as otherwise specifically provided in this
chapter any
person who -
o (a) intentionally intercepts, endeavors to intercept,
or
procures any other person to intercept or endeavor to
intercept,
any wire, oral, or electronic communication;
o (b) intentionally uses, endeavors to use, or procures
any other
person to use or endeavor to use any electronic,
mechanical, or
other device to intercept any oral communication when -
+ (i) such device is affixed to, or otherwise
transmits a
signal through, a wire, cable, or other like
connection used
in wire communication; or
+ (ii) such device transmits communications by
radio, or
interferes with the transmission of such

communication; or
+ (iii) such person knows, or has reason to know,
that such
device or any component thereof has been sent
through the
mail or transported in interstate or foreign
commerce; or
+ (iv) such use or endeavor to use (A) takes place
on the
premises of any business or other commercial
establishment
the operations of which affect interstate or
foreign
commerce; or (B) obtains or is for the purpose of
obtaining
information relating to the operations of any
business or
other commercial establishment the operations of
which
affect interstate or foreign commerce; or
+ (v) such person acts in the District of Columbia,
the
Commonwealth of Puerto Rico, or any territory or
possession
of the United States;
o (c) intentionally discloses, or endeavors to disclose,
to any
other person the contents of any wire, oral, or
electronic
communication, knowing or having reason to know that
the
information was obtained through the interception of a
wire,
oral, or electronic communication in violation of this
subsection; or
o (d) intentionally uses, or endeavors to use, the
contents of any
wire, oral, or electronic communication, knowing or
having reason
to know that the information was obtained through the
interception of a wire, oral, or electronic
communication in
violation of this subsection; shall be punished as
provided in
subsection (4) or shall be subject to suit as provided
in
subsection (5).
* (2)
o (a)
+ (i) It shall not be unlawful under this chapter

for an
operator of a switchboard, or an officer,
employee, or agent
of a provider of wire or electronic communication
service,
whose facilities are used in the transmission of a
wire
communication, to intercept, disclose, or use that
communication in the normal course of his
employment while
engaged in any activity which is a necessary
incident to the
rendition of his service or to the protection of
the rights
or property of the provider of that service,
except that a
provider of wire communication service to the
public shall
not utilize service observing or random monitoring
except
for mechanical or service quality control checks.
+ (ii) Notwithstanding any other law, providers of
wire or
electronic communication service, their officers,
employees,
and agents, landlords, custodians, or other
persons, are
authorized to provide information, facilities, or
technical
assistance to persons authorized by law to
intercept wire,
oral, or electronic communications or to conduct
electronic
surveillance, as defined in section 101 of the
Foreign
Intelligence Surveillance Act of 1978, if such
provider, its
officers, employees, or agents, landlord,
custodian, or
other specified person, has been provided with -
+ (A) a court order directing such assistance
signed by
the authorizing judge, or
+ (B) a certification in writing by a person
specified
in section 2518(7) of this title or the
Attorney
General of the United States that no warrant
or court
order is required by law, that all statutory

requirements have been met, and that the
specified
assistance is required, setting forth the
period of
time during which the provision of the
information,
facilities, or technical assistance is
authorized and
specifying the information, facilities, or
technical
assistance required. No provider of wire or
electronic
communication service, officer, employee, or
agent
thereof, or landlord, custodian, or other
specified
person shall disclose the existence of any
interception
or surveillance or the device used to
accomplish the
interception or surveillance with respect to
which the
person has been furnished a court order or
certification under this chapter, except as
may
otherwise be required by legal process and
then only
after prior notification to the Attorney
General or to
the principal prosecuting attorney of a State
or any
political subdivision of a State, as may be
appropriate. Any such disclosure, shall
render such
person liable for the civil damages provided
for in
section 2520. No cause of action shall lie in
any court
against any provider of wire or electronic
communication service, its officers,
employees, or
agents, landlord, custodian, or other
specified person
for providing information, facilities, or
assistance in
accordance with the terms of a court order or
certification under this chapter.
o (b) It shall not be unlawful under this chapter for an
officer,
employee, or agent of the Federal Communications

Commission, in
the normal course of his employment and in discharge of
the
monitoring responsibilities exercised by the Commission
in the
enforcement of chapter 5 of title 47 of the United
States Code,
to intercept a wire or electronic communication, or
oral
communication transmitted by radio, or to disclose or
use the
information thereby obtained.
o (c) It shall not be unlawful under this chapter for a
person
acting under color of law to intercept a wire, oral, or
electronic communication, where such person is a party
to the
communication or one of the parties to the
communication has
given prior consent to such interception.
o (d) It shall not be unlawful under this chapter for a
person not
acting under color of law to intercept a wire, oral, or
electronic communication where such person is a party
to the
communication or where one of the parties to the
communication
has given prior consent to such interception unless
such
communication is intercepted for the purpose of
committing any
criminal or tortious act in violation of the
Constitution or laws
of the United States or of any State.
o (e) Notwithstanding any other provision of this title
or section
705 or 706 of the Communications Act of 1934, it shall
not be
unlawful for an officer, employee, or agent of the
United States
in the normal course of his official duty to conduct
electronic
surveillance, as defined in section 101 of the Foreign
Intelligence Surveillance Act of 1978, as authorized by
that Act.
o (f) Nothing contained in this chapter or chapter 121,
or section
705 of the Communications Act of 1934, shall be deemed
to affect
the acquisition by the United States Government of

foreign
intelligence information from international or foreign
communications, or foreign intelligence activities
conducted in
accordance with otherwise applicable Federal law
involving a
foreign electronic communications system, utilizing a
means other
than electronic surveillance as defined in section 101
of the
Foreign Intelligence Surveillance Act of 1978, and
procedures in
this chapter or chapter 121 and the Foreign
Intelligence
Surveillance Act of 1978 shall be the exclusive means
by which
electronic surveillance, as defined in section 101 of
such Act,
and the interception of domestic wire and oral
communications may
be conducted.
o (g) It shall not be unlawful under this chapter or
chapter 121
of this title for any person -
+ (i) to intercept or access an electronic
communication made
through an electronic communication system that is
configured so that such electronic communication
is readily
accessible to the general public;
+ (ii) to intercept any radio communication which
is
transmitted -
+ (I) by any station for the use of the
general public,
or that relates to ships, aircraft, vehicles,
or
persons in distress;
+ (II) by any governmental, law enforcement,
civil
defense, private land mobile, or public
safety
communications system, including police and
fire,
readily accessible to the general public;
+ (III) by a station operating on an
authorized
frequency within the bands allocated to the
amateur,
citizens band, or general mobile radio

services; or
+ (IV) by any marine or aeronautical
communications
system;
+ (iii) to engage in any conduct which -
+ (I) is prohibited by section 633 of the
Communications
Act of 1934; or
+ (II) is excepted from the application of
section
705(a) of the Communications Act of 1934 by
section
705(b) of that Act;
+ (iv) to intercept any wire or electronic
communication the
transmission of which is causing harmful
interference to any
lawfully operating station or consumer electronic
equipment,
to the extent necessary to identify the source of
such
interference; or
+ (v) for other users of the same frequency to
intercept any
radio communication made through a system that
utilizes
frequencies monitored by individuals engaged in
the
provision or the use of such system, if such
communication
is not scrambled or encrypted.
o (h) It shall not be unlawful under this chapter -
+ (i) to use a pen register or a trap and trace
device (as
those terms are defined for the purposes of
chapter 206
(relating to pen registers and trap and trace
devices) of
this title); or
+ (ii) for a provider of electronic communication
service to
record the fact that a wire or electronic
communication was
initiated or completed in order to protect such
provider,
another provider furnishing service toward the
completion of
the wire or electronic communication, or a user of
that
service, from fraudulent, unlawful or abusive use

of such
service.
* (3)
o (a) Except as provided in paragraph (b) of this
subsection, a
person or entity providing an electronic communication
service to
the public shall not intentionally divulge the contents
of any
communication (other than one to such person or entity,
or an
agent thereof) while in transmission on that service to
any
person or entity other than an addressee or intended
recipient of
such communication or an agent of such addressee or
intended
recipient.
o (b) A person or entity providing electronic
communication
service to the public may divulge the contents of any
such
communication -
+ (i) as otherwise authorized in section 2511(2)(a)
or 2517
of this title;
+ (ii) with the lawful consent of the originator or
any
addressee or intended recipient of such
communication;
+ (iii) to a person employed or authorized, or
whose
facilities are used, to forward such communication
to its
destination; or
+ (iv) which were inadvertently obtained by the
service
provider and which appear to pertain to the
commission of a
crime, if such divulgence is made to a law
enforcement
agency.
* (4)
o (a) Except as provided in paragraph (b) of this
subsection or in
subsection (5), whoever violates subsection (1) of this
section
shall be fined under this title or imprisoned not more
than five
years, or both.

o (b) If the offense is a first offense under paragraph
(a) of
this subsection and is not for a tortious or illegal
purpose or
for purposes of direct or indirect commercial advantage
or
private commercial gain, and the wire or electronic
communication
with respect to which the offense under paragraph (a)
is a radio
communication that is not scrambled or encrypted, then
-
+ (i) if the communication is not the radio portion
of a
cellular telephone communication, a cordless
telephone
communication that is transmitted between the
cordless
telephone handset and the base unit, a public land
mobile radio
service communication or a paging service
communication, and
the conduct is not that described in subsection
(5), the
offender shall be fined under this title or
imprisoned not
more than one year, or both; and
+ (ii) if the communication is the radio portion of
a
cellular telephone communication, a cordless
telephone
communication that is transmitted between the
cordless
telephone handset and the base unit, a public land
mobile radio
service communication or a paging service
communication, the
offender shall be fined not more than $500.
o (c) Conduct otherwise an offense under this subsection
that
consists of or relates to the interception of a
satellite
transmission that is not encrypted or scrambled and
that is
transmitted -
+ (i) to a broadcasting station for purposes of
retransmission to the general public; or
+ (ii) as an audio subcarrier intended for
redistribution to
facilities open to the public, but not including

data
transmissions or telephone calls, is not an
offense under
this subsection unless the conduct is for the
purposes of
direct or indirect commercial advantage or private
financial
gain.
* (5)
o (a)
+ (i) If the communication is -
+ (A) a private satellite video communication
that is
not scrambled or encrypted and the conduct in
violation
of this chapter is the private viewing of
that
communication and is not for a tortious or
illegal
purpose or for purposes of direct or indirect
commercial advantage or private commercial
gain; or
+ (B) a radio communication that is
transmitted on
frequencies allocated under subpart D of part
74 of the
rules of the Federal Communications
Commission that is
not scrambled or encrypted and the conduct in
violation
of this chapter is not for a tortious or
illegal
purpose or for purposes of direct or indirect
commercial advantage or private commercial
gain, then
the person who engages in such conduct shall
be subject
to suit by the Federal Government in a court
of
competent jurisdiction.
+ (ii) In an action under this subsection -
+ (A) if the violation of this chapter is a
first
offense for the person under paragraph (a) of
subsection (4) and such person has not been
found
liable in a civil action under section 2520
of this
title, the Federal Government shall be
entitled to

appropriate injunctive relief; and
+ (B) if the violation of this chapter is a
second or
subsequent offense under paragraph (a) of
subsection
(4) or such person has been found liable in
any prior
civil action under section 2520, the person
shall be
subject to a mandatory $500 civil fine.
o (b) The court may use any means within its authority
to enforce
an injunction issued under paragraph (ii)(A), and shall
impose a
civil fine of not less than $500 for each violation of
such an
injunction.

Ramsey electronics also sells a kit.
According to a friend of mine, many electronics classes used to make this one of their first class projects. Since this was 25+ years ago, I doubt you have to have fancy "chips".
cheers

I simply cannot believe the amount of misinformation posted about this topic. Please give me the legal codification (citation) of the alleged law you have so capably misquoted. For the record...Congress attempted to legislate the illegality of monitoring cell calls. Just about all of you reading this know that your scanners can be modified to receive cell calls--either by clipping a resistor or placing the unit in diagnostic mode or whatever. That's because, in other countries where the circuit boards are produced, users want this feature and there are no or few laws governing privacy--eastern cultures make the assumption of nonprivacy--unlike the west, but I won't get into that. Anyway, to sell these boards in other countries, they disabled the cell capability, albeit with a wink and a nod. Finally, bowing to the realization that they were in fact feckless to prevent someone from "tuning in" Congress then passed a law making it legal to monitor anything but making it illegal to use the information for personal gain in any way whatsoever, inter alia.

Finally, to anyone who thinks their broadcasted conversations--whether cell or portable--are not being monitored please leave me email. I have

some desert property I'd love to sell you. Oh, and again...if anyone disagrees with this, please email me with a correct, legal citation for the law that backs you up. Without that, your argument is about as powerful as a f*rt in a windstorm...

Thanks at least for including cites for your position. I'll look them up
and compare them with the codified laws I believe are on point. At any
rate, whether it's legal or not, I pose the following question: who would
want to spend their time listening to somebody else's phone conversation,
anyway??? Years ago, I spent an afternoon with a friend whose scanner
received cell calls--I don't know if it was legal at the time or if he had
moded the receiver. What I recall is several hours of: "Don't forget to
stop for milk on the way home," "I love you honey!" and "Ok, Bob--I'm at
the job site and I think we're gonna need about 20 more yards of
concrete..." Is this what you want to spend your time doing??? To those
people who answer "yes" I would say, "Get a life."

Of course they raised the premiums, there are less than half the users of
a year ago left. I dropped it due to the slowing activity in the radio
forums. Plus I don't like 'a la carte' pricing. Flat rate, that's the way
to go.

Nothings wrong, that is one of the enhanced features you get on the 2042.
Also automatic lockout of blank channels.

I've found that by limiting the search to a small range (i.e. 30 mkz-32
mkz) helps.

>A better antenna is definitely the way to improve your reception. In
>fact, it's the only way.

The only thing a log periodic will get you is directivity. You will gain the advantage of being able to select what direction you are listening to. Otherwise, a discone and log-periodic offer very wide bandwidth with low to moderate gain.

On the minus side, you have to be able to physially turn a log periodic, which requires some sort of rotater.

You might have some success with an amplifier if you can put some sort of tunable filter between the antenna and amplifier. At least you can restrict was is coming into your scanner somewhat.

Alternatively, you could have a bank of vertical antenna, each for a different band....

From: bandyinc@onramp.net
Message-ID: <4jhdd8$7ov@news.onramp.net>
Source record: 237500
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have four vhf/uhf receivers, and four scanners (25 to 1300MHz). The receivers require dual antenna inputs for differant freq. ranges (ie: 30 to 90, 60 to 300, 235 to 500, and 490 to 1000 MHz). I only have 3 antennas,(the neighbors wont stand for many more) one diamond & one cheap radio shack model, and a scanner beam. I have several 1 to 4 splitters and a couple of vhf/uhf amps. I would like to get the best signal possible to all of the radios. Where would you insert the amps, splitters, etc. Should I pickup more amps, antennas, or ??? I would appreciate any advice, comments, or input you have to offer.

You didn't say what your roof is like. If you have an attic, I'd suggest putting some up there. If you put splitters all over the place you'll cut down your signal.
I suggest you use the best possible splitters you can find (try Grove).
I don't know if you can use one splitter, and one antenna for all the inputs on the same scanner or not.
Good
luck

Some Bearcat 2500's (early production ones) drained the heck out of the
batteries. Mine was one of them. Uniden said to send it back, they
would do a factory mod to it so it would function like the newer ones.
No cost for the mod. Took about 1-1/2 weeks, I expected longer. Much
better performance after. Recommend you send it back for this mod.

Fellow hobbyists:

My ol' reliable Bearcat 200 handheld recently took a dump. The radio had been working fine previously. I kept it in my backpack in it's own padded pouch and carried it to work everyday.
For a period of time I left it in the backpack and let the battery drain down. About a week ago, I took it out of the backpack and decided it was time to charge it up for springtime.
Well, that's when the problem was discovered... Much to my chagrin, the damn thing wouldn't turn on, even with the charger in the battery pack. I let it charge overnight (approx. 12 hrs.) and still it would not turn on, no display, no sqawk from the closed squelch through the speaker, zip, zilch, nada!
Needless to say I was pissed. I checked the supply and battery pack on a bench tester vmeter and they both checked out.
I disassembled the rig and peeked inside and both power leads were connected and were allowing current through to the board. I observed no obvious signs of damage, (i.e. little surface mount parts falling about on my bench) nor any other visable signs of abnormality as from drop damage or other shock...
HELP! My summation is that I have a bad op-amp on the mainboard somewhere... Any ideas, tips or other info would be appreciated! Is there a factory reset dip or pin-push switch on the mainboard somewhere? Is it time to trash or should I mail it to factory service? Perhaps, I should buy another rig. I hate to think that ol' reliable is finished... Thanks in advance for any assistance! Spare me spam, like I give a damn.

Regards,
Sean Murphy

Update on Microwave Bugging Devices - 3/28/96

0.902 - 0.928 ghz - Popular Commercial FH/DS Devices
1.710 - 1.755 ghz - DEA Audio/Video Bugs (over 1400 bugs purchased in 1995)
1.710 - 1.755 ghz - DOJ Audio/Video Bugs (.25 to .50 watts)
1.710 - 1.850 ghz - Treasury Video Surveillance Systems
2.400 - 2.484 ghz - Popular Commercial FH/DS Devices
4.635 - 4.660 ghz - Treasury Video Surveillance Systems

Most recently purchased gvt microwave surveillance gear seems to be running between 900mhz to 5ghz, with a few systems operating on the 7/8 ghz bands.

Also, keep in mind that the pros love to use ultra low power devices which use the power lines as the transmission medium/antenna (9khz to 300 mhz). Devices typically operate below 10mw, often below 1mw. The devices typically use Wide FM and use voice inversion encryption... VERY easy to demodulate.

Note: According to a recently obtained DOJ surveillance training manual:

�The typical range for the 28 ghz devices is six miles, the typical range of the 2.4 ghz is thirty miles, and the typical range for the 1.7ghz is 44 miles.�

�... frequency modulated applications should operate below 3 ghz to take advantage of the favorable frequency propagation characteristics of that part of the spectrum.�

�...Frequency Hopping and Direct Sequence Devices spead spectrum devices should operate above 1.5 ghz, this will prevent the emissions from being detected by electronic countermeasures.�

I have been enjoying the scanning hobby along with amateur radio for several years. Have owned many different scanners, large and small.

A buddy of mine owns and operates a PRO-51. LOVES IT. It's got a hot little receiver, extremely fast scanning speed, and being a handheld--great for any type of scanning action.

Go for it. Especially for the knockout price!!!!

Correct me if I'm wrong, but I don't think there is any difference between
the 2035 and the 2042 in the receiver section. I thought the only change
was in the firmware ???

Bottom Line, if you buy an American Pro 26 and modify it, or choose to
purchase an unblocked Pro 26 from another country, you will still have to
search in either 5, 12.5, or 30 khz steps, ignoring some of the default
step ranges for TV, FM, etc.

Well I am down here in Miami,FL and the county pd is going to change its freqs to 800 digital. I have heard that we won't be able to listen to them any more because the freqs is digital can anyone please give me some info on whether or not this is true and whether I can be able to listen to them.

Fernando

: That's what I did, replaced the whole board, i'm very satisfied
: with my European Board from Javiatin. It only took 3 weeks from
: the UK and 10 minutes to install. No soldering.

How much is this? Are these in short supply? Do they also work with the
Pro-2042? Does it give any other benefits besides unblocking, such as
providing for computer interface?

ooooooooooooooooooooooooooooooooooooooooooooooooo

Well,now!

Here is a case where a *GasFet Low-Noise Pre-Amp is in order! Don't miss this sports fans!... Mr. Hill is going to have a Kick Ass System!

About the antenna and coax... *no* Pre Amplifier or Amplifier will boost what it can't hear or 'see' at it's input. Mount your antenna as safe, clear and high as possible. The exception is IF you have good elevation to start with. In that case, what would another 20' of antenna elevation buy you?!

Signals can come from all directions, consider a multi-band base antenna, as in tri-band. Diamond and Comet make some of the best. Next choice is a good discone. Use Quality coax... you don't want to loose that signal in budget/old/lossy/wet/used coax. Use quality 50ohm coax by Belden, 9913 or RG-8u for short runs (under 35'). Be sure to Seal the connector at the antenna. Radio Shack has special green sealer tape just for that job.

From the antenna (see diagram below), your coax hits the Input of the Pre-Amp. Next, the Output of the Pre Amp connects to a transformer, 50 ohms in, 75 ohms out to the 2 WAY Splitter. The outputs of the 2 WAY feed the input of 2 Four-Way Splitters. This provides 8 ports out! So it looks like this:

```
__>4 WAY = 4
Outputs
|
ANT--coax--->in PRE-AMP out-->TRANSFORMER->2 WAY
|__4>WAY = 4 Outputs
```

Know that *all* splitters can introduce serious losses in antenna systems! In the case of the 4-way ~ about -7.8db and even more as the frequency goes up. The two-way introduces at least -3.7db of loss. **Make

SHURE those splitters designed for both VHF AND UHF! And yes, even the matching transformer has loss. Just the splitter losses total over -10db! Therefore, your Pre-Amp MUST be of Preimum Quality and it should provide a minimum of +13db, honest Gain.

It is also VERY important that the Pre-Amp have a very low 'noise figure'. The 'noise figure' is the internal 'white noise' generated within the Pre Amp itself as it amplifies. Consider that 'white noise' is similar to the sound a receiver makes with open squech... your very weak signals can be burried under that! This internal 'noise figure' is a critical factor and it is also rated in db's. Hence, the LOWER the noise figure the better! And the higher the Gain, the better, just don't drive your receiver into overload, in this case there should be no problem of that. And no, you won't blow up your scanner with a Pre-Amp.

*Consider a Pre-Amp by Mini-Circuits. This Pre-Amp is the Heart of your antenna system. It offers a Minimum Gain of +20db (!) and has a noise figure of 2.9db. It will provide those specs. from 100Khz thru 1,000MHz! This is true aerospace quality equipment. The model number is: ZFL-1000NL. It will cost you $89. Add $5 for BNC connectors! (1993 prices). You may be able to special order one with 75 ohm output? 1-800-654-7949. Requires 12 volts DC at 60 milliamps. A very cool, fully sheilded, tiny metal case is provided. The voltage can come from inside of one of your scanners.

A UHF/VHF TV Amplifier will simply not do in this case because the internal 'noise figure' is simply too high, where weak signals get burried in "white-noise" the amplifier makes doing it's job. TV signals have much higher signal levels and that's why the 'noise floor' is seldom considered. Besides, a Quality Weinguard TV amplifier will cost even more than the Pre Amp mentioned above... It's a matter of the right tool for the right job. BTW, I've seen some very over-rated "TV Booster" amps around... you may have seen them in the silver chrome cases? Just remember that you get what you pay for.

More good news, if you just have a discone antenna now, you can upgrade your whole Antenna System with one antenna later! This is why appartments, hotels and condos use similar systems. In time, antennas do age... you will only have to replace only one! Want to pump siganl to your FM Receiver? No problemo...(if you have any ports left)!

Lastly, I will address the issue of the 75 ohm coax feeding the 50 ohm input(s) of the scanner. Because of the extra gain your Quality Pre-Amp will provide, I'll take the small loss that mismatch will introduce.

Parts List: Antenna, Connectors, sealer, mast, guys, clamps,*Pre Amp, (1) 50 Ohm to 75 Ohm Transformer, (1) 2 Way **Splitter, (2) 4 Way **Splitters, 'F' connectors, a length of 75 ohm coax for jumpers, and 2 BNC connectors.

>If you buy a European PRO-26, it will NOT step in 30 Khz increments.
>Remember that the USA cellular channel spacing is 30 Khz. You will have
to
>set it for a 5 Khz step and hit the serch button more than you would
like.

Jim,

But at least you have direct keyboard entry of cellular frequencies. Yes you have to use 5KHz but you have to use 5KHz on a US model if you listen to images or do the "jumper" mod so that "argument" is pretty weak IMO. I have an MVT-7100 that does not have 30KHz steps - just use 10KHz and it works like a champ.

I'm now waiting on my PRO-26 from Javiation ordered last week and I won't be worrying about images or mods. I choose the PRO-26 over the Bearcat 3000XLT so I could use AA batteries.

Whatever, enjoy what you have !

WTA.

: Rick Colombo@fnal.gov

Just reread the message the key words here are the 12v universal
adapter which has a bunch of different plugs on the end of it.

HELLO !!!
If the speaker is indeed AC coupled to the audio amp then injecting
12vdc should not have passed through the capacitor. Now if it was DC
coupled, then you would have problems.

Cross-posted to: rec.radio.scanner,rec.radio.swap

For Sale: Uniden Bearcat 350A Mobile Scanner

Covers the following frequencies (MHz):

29-54, 108-174, 406-512

Includes preprogrammed frequencies in banks for Police, Fire/Emergency,
Aircraft, Marine, and Weather. (Police and Fire banks have 20 and
10 user-programmable slots respectively.) Also includes a private bank for
20 additional frequencies.

Antenna, all manuals, hardware, etc. (including car mounting bracket and
cigarette lighter adapter) included. 120V power cube is a bit
flaky, but a standard 12VDC/500mA adapter will work.

$60 or best offer.

Send email if interested.

Source record: 237419

Ok, people. Here's the latest scream about Radio Shack. Pick up the
1995-96 copy of "Police Call" (Orange book; the Blue one is 96-97) and
look on Pages 34 and 35. No, wait, read the whole introduction! It is
nothing but pompass SHIT they wrote just to be able to say they
introduced the book.

I will quote some of it. Fuck their shitty copyrights.
Comments in ()'s are my own.

"BEFORE YOU WRITE...
We love to hear from you! Tell us what you liek, or don't like
about Police Call. Before you ask us a question, please read 'Listener's
Guide' to be sure the answer isn't to be found there."
^^
Boy, we SURE are STUPID, aren't we.

"1. 'Can you send me the frequency of...?'
What you see in POLICE CALL is all we've got. (snip snip) We
print everything that's in the computer (ROFL) when we go to press.
Between Issues, we can't answer induvidual requests for frequencies not
shown."
^^
Gee, you jack asses at Radio Shack sure are nice!!! I'm glad I can go
to PerCon.

"4. 'Is POLICE CALL available on disk?'
No. We have no plans to do so."
^^^
Damn, that was blunt!

"5. 'Do you have information on ...'
No. Contact your dealer or manufacturer."
^^^
Ouch! Dammit don't they have ANY compassion? Hell if *I* worked at
Radio Shack I'd even help the goddamn newbies that stroll in every day.

JunKie <seizure@fdt.net>

: To the serious scanner fan,

: This file was five US Government files found at NTIA/OSM; burried deep
: within the Internet. Now, all five files are combined into one document.
: The redundant info has been editied out. The data includes assignments
: from 137MHz thru 5GHz! It is a outstanding resource document.

This is the second time this fella has posted this "file" and it is NOWHERE to be found. He is obviously trying to attach it via MIME or some other type of method that IS NOT WORKING. I mailed him about it and he doesn't appear to understand. Anyway, for those of you confused because there is no attached file as indicated, you are not alone. I was able to get this guy to send it to me email, but guess what he did...he encoded it via BINHEX-4.0. For people trying to send plain text files over email or to newsgroups, however large they may be, it is NOT NECESSARY to encode the file. UUENCODING, MIME, and BINHEX are for encoding BINARY files so that they can be transmitted via email/usenet. If you have a big text file (within reason) that you want to post, just send it within the document! Don't try to encode it!
Thanks.

>

How much is the Euro board? Is replacing the board to get cell the only
reason you would make this mod? How does the board compare to the US version
(it probably uses the UK bandplan right?).

The OS535 will also restore cell coverage and give you computer control to
boot, if you're willing to pay about $300.

I have a 100MHz Pentium, 16 Meg RAM, blah, blah, blah and I find the search speed to be excruciatingly slow. The only alternative is to copy the CD to your hard drive, assuming you have room for it. I bought the CD this week, and must admit that I'm a bit disappointed. The interface is cheesy and the program doesn't give you much in the way of options for slicing and dicing data. The next thing will be for me to try and dump it all into some other database program and see if I can massage the data better. There are also a lot of discrepancies with the data on CD with what I have with ScannerMaster and Police Call

> I usually find fast food resturants in my area in the 29-54 Mhz range.

I found the McDonalds In Gaithersburg, MD on 920.5000 Mhz Wide FM. The
headsets in use there were manufactured by "GM"

Todd Penney (tpenn@ATCON.COM) in Halifax, Nova Scotia found a Dairy Queen
on 920.2625 Mhz

Has anyone had any luck in finding the input frequency (headset) for this
new type of headset?

Thanks,
Bob

I posted to this group a short while ago, questioning static and handhelds
in cars using a window "clip-on" antenna.

I think some people responded thinking that I meant RF static. What I'm most
concerned about is having a handheld in the car (not connected to any ground)
while an antenna is blowing in the wind outside and consequently (potentially,
anyway) building up a static electricity charge that might affect the ungroundedscanner.

I know I could use a cigarette lighter adapter, which would ground the unit
to the car, but I'd really just like to run the scanner on its own nicads
and keep it simple.

thanks,
mark

Our county(Carbon) is switching from vhf low band to uhf band for
emergency services this month and I was wondering a few things.
1. Why would they use a seperate frequency for paging and then others
for the responses like the fire trucks, chiefs, etc. Each department
will have their own freq as well as a centralized freq for neighboring
departments. Is this the norm.
2. How far is the normal range of a uhf repeater system. Besides the
obvious like height of antenna and power of transmitter. An educated
will do based on experience.
3. In a paging only mode is the tones the same like the vhf low band
using a Motorola system.

The basic idea of the comm center is to page out twice on a single
frequency on uhf clear the channel and not have to listen to all the
response garbage. They can tune in to the fire dispatch and local
channels which are normal repeater two way channels. The paging is
simplex. Again, any ideas on how this setup works and why they are
using it.

Any response will be greatly appreciated. Nick

GS> Never seen an MDT in the SF Bay Area Flea Market. I am major jealous.

Don't be. MDT's are normally a assignable unit, ie just hooking one up will not allow you to monitor the traffic, unless it was a supervisors unit, or one from the radio shop, and they are still using the same protocol, and they have not locked those old units out.

AirComm routinely has older units for sale, the last bunch included the Syntor radio, and the MDT, all cables, for $400.00 apiece.

Take the bottom off. Find the board on the bottom behind the display that has all of the ribbon cables going to it. Look for a wire-loop jumper labeled L201 (I think that is the number, it is the only wire loop on the board, about center at the rear).

If there is a jumper in the L201 position, cut it and separate the halves. If there isn't a jumper in the two PC board holes at the location marked L201, then it is not a restorable scanner.

Steve

Really?? Exactly _where_ did you read this tidbit that will astound the entire medical community? Perhaps one of those highly respected medical journals one can purchase with their groceries? Although I wouldn't doubt the integrity of someone with, say, an "enquiring mind," I can personally attest to the fact that smoking did in fact cause leukoplakia (pre-cancerous thickening of the oral squamous epithelium) as well as squamous cell carcinoma in several of my patients. In fact, if you add alcohol to cigarettes, the appearance of all kinds of cancers increase dramatically. Where I believe you probably read what you say you did, perhaps the author was trying to make a point by pointing out the ridiculous.

I have a feeling I know the answer to this already, but I figured I'd ask anyway. Are there any mods out there for the BCT-7 that would extend it's frequency coverage (not necessarily into the cellular band).

Thanks,
Wes

Does anyone know what the "a" revision to the AR3000 means? Other than more LCD replacing some LEDs, and a different knob action, what other changes were made to the AR3000?

Cheers,
Graeme
(A happy AR3000 owner)

Someone with a Uniden schematic can provide you an exact answer,
but in general, most receivers would have a audio power amplifier,
such as a National LM380 or LM386, and usually a electolitic cap
between the amp and the speaker jack. Plugging +12 into the
speaker jack would reverse bias the cap, causing it to conduct,
heat up, and likely short out. The power amp would likely also
be damaged by having a constant +12V applied to the output.

Change these parts, and it'll likely work fine.

I monitor railroads in the Bato area and had a similiar need for a specialized roof antenna. After a lot or reading i purchased a...omnidirectional 2 meter ham radio antenna that can be adjusted to pretty damn close to the needed length, in fact, I beleive that the antenna has a length chart including the rail band at the upper range. The Cushcraft ARX2B Ringo Ranger fit the bill, is 14 feet in length with 7 db gain.Coupled with low loss RG6 coax cable to my Pro 2006 in the basement , the signals I pick up are incredible. It blows away the Diamond D130 discone I use for the same purpose upstairs and has been a godsend. I can pick up strong signals from the washington DC area as well as rare reception from S. penn in winter. I recommend exploring this possibility for your application. Good luck.

According to the ECPA, it's illegal to listen to cellular and cordless phones. That's the
law. You can argue
all you want to about the ability to *enforce* the law, but it's the law, nonetheless.

I have a severe case of foot-in-mouth over this, and I apologize.
There are indeed cellular frequencies from 890-894 MHz. And, cell phones can be used over water, as long as the
signal strength is such that a cell tower can pick them up.
Sorry for any confusion I caused.

> ==========
I would think this newsgroup will do fine with this thread.
The future of scanning? Well, my crystal ball is a little murkey on this, but it would seem that the present
trend towards 800 MHz trunked systems will continue, since the spectrum is crowded, and trunking is a good way
to alleviate this. Digital systems are, however, probably not going to be as popular as it's now thought, as
the digital systems are much more expensive than analog, and are not as reliable. So, monitoring trunked
systems will probably be with us for at least the next decade.
Aside from governments, there's not much need for privacy (other than what already exists), so most other
utility radio will probably remain analog, as well. Anti-paging tones will be easily handled by "smart"
circuitry, sort of like the Radio Shack "sound squelch".
Computer control will be standard on all but the lowest level of scanner. As costs for memory go down, memory
channels will multiply, as will the ability to manage them.
Since there is no appearant breakthrough in antenna design coming soon, reception itself will not improve much
over today's models; sensitivity is already to the point where the noise floor can't be reduced (very little of
the noise comes from the radio, it's almost all from the antenna). Selectivity will improve, though. Images
will be greatly reduced, as will intermod, with the improved selectivity.
With added gee-gaws, the controls will have to be multiplexed, and displays will need to be improved.
Backlighting of both display and key definitions will be needed, which means a better lighting system, that
won't drain the batteries so much, will be needed.

Well, that should get us started.

AOR1500 Hand Held Scanner (UNBLOCKED) $100

In very good condition with all accessories and instruction manual.

Specification

Frequency Range: 500KHz - 1300Mhz (no gaps)
Step sizes: 5Khz to 995Khz
Sensitivity: FM - 0.5uV or better
AM - 3uV or better
Modes: AM, SSB(BFO), Narrow FM and Wide FM
Scan speed: 20 Channels/second
Search speed: 20 Steps/second
Memory channels: 900 Channels plus 100 channels auto memory, total 1000
Search range: 9 normal search banks and 1 search bank for automemory
Priority: 2 sec of sampling rate
Antenna Input 50 ohms BNC connector
Audio Output: 100mW at 10% THD or better
Power Supply: 6V DC from built in Ni-Cad. battery pack
or 11 - 18 V DC from CHG jack
Size: 55(w) x 152(1) x 40(d)mm
Weight: 385 gram

Optoelectronics Model 1300H/A Hand Help Frequency Counter $25

In very good condition with all accessories and instruction manual.

Specification

Frequency Range: 1Mhz - 1300Mhz
Max Power In/No Damage: +15dBm
Size: 3.9" High x 3.5" Wide x 1" Deep
Weight: 9 Oz
Display: 8 LED Digits, .28"
Accuracy: +/- 1 Part Per Million
Aging: 10 PPM Per year
Gate Period: .25 or 2.5 Seconds, Selectable
Resolution: 100 Hz/2.5 Second Gate, 1Khz .25 Second Gate
Power: Internal NiCad Batteries, 2 Hour Discharge
Cycle with Overnight Recharge using 9 Volt
DC 300 MA Plug Transformer.

Entire package $125 or best offer + shipping and COD

: Todd Penney (tpenn@ATCON.COM) in Halifax, Nova Scotia found a Dairy Queen
: on 920.2625 Mhz

It seems quite strange that McDonald's would be on wide FM. This
requires 200KHz of bandwidth, rather than the 12.5 or so you need for
narrow FM. All McD's needs is voice. The only use I am aware of WFM in
this band is Muzak, where they are trying to get hi-fi audio (music) out
of the receiver. Why would McD's pay a huge amount more for spectrum
allocation to get hi-fi sound just for voice?

: would't work,

I can think of one reason why. Each cell site usually has only a limited number of frequencies it uses. Also, some cell sites have antennas which are are directional, and use different frequencies for each. There is probably a cell site near the ocean, which uses those particular frequencies. When people use their phones from the boats, the phones naturally connect to the cell nearest the ocean.

rickard faivre (rickard.faivre@mailbox.swipnet.se) wrote:
: How does one go about demodulating voice inversion encryption systems?
: Are there any computer programs out there?

They sell boxes, or kits to build them, in the popular scanner magazines.

I suppose you could do something if you have access to a programmable DSP. Like, sample the voice at 2x the inversion frequency, negate every second sample, then lowpass-filter at the limit of the audio (i.e. 3Khz). Normally, the inversion is done by replacing the frequencies with 4Khz minus the frequency. So in this case, you need to sample the audio at 8Khz. There are several good shareware WAV file manipulation programs (i.e. GOLDWAVE) which can do this, but it takes a fair amount of skill. Then you'd need your own program to open the WAV file and invert every second sample. Like I said, you can do this, but it will take a fair amount of effort.

--
Hmmm... *300* ch/sec in 5 kHz steps isn't so bad. Since there
aren't any signals between the 30 kHz spacing, and since it won't
stop without a signal, there is no reason to hit the search button
any more often than as if it searched in the actual 30 kHz steps.

HI Mark, just use your VCR. It should have input jacks and be able to record for 6 hours with standard tape at Extra Low Speed.
Just see what kind of cable adapter you'll need to adapt the scanner phone jack to the VCR input. Get it at Radio Shack.
Cheers, Ron Cain

SB> Let's get this plain and simple ... cordless monitoring - judge(s) have
SB> ruled you have no expectation of privacy when using a cordless phone.

Let's get THIS plain and simple, Judges decisions ONLY can be cited as precedents when they DON'T conflict with a law, and the LAW has changed, making monitoring cordless phones illegal.

If you want to flaunt that law, PLEASE make it clear that you KNOW it's illegal, and that you aren't encouraging others to break the law.

These headset were manufactured by "GM" and were one piece units. The
transmitter was located in the headset itself. They were operating on
the following frequencies:

Customer (speaker) 920.500 Wide FM
Clerk (headset) 903.500 Wide FM

6311. Re: 800 Trunked Digital

Newsgroup: rec.radio.scanner
Date: 1996-03-31 00:00:00 UTC
From: "B. K." <bk104@hgea.org>
Message-ID: <4jko25$qi8@hgea01.hgea.org>
Source record: 237349

Yes it is true:

If the PD id going to TRUE DIGITAL trunking, your radio scanner (which can only decode analog signals) will not be able to decode the digital signal.

BUT some people that have purchased DIGITAL Trunked radios and have access to the software can monitor. I'd say 99% of the time, this method has been illegal (meaning that the user somehow got something that they weren't suppose to have).

My PD here is going Digital in 96 and the news media is being allowed to purchase a $3000.00 radio that can monitor only the normal radio traffic.

Hope this helps. When and if someone makes a digital scanner is uncertain. (The problem is what price are people willing to pay???)

Fellow hobbyists:

My ol' reliable Bearcat 200 handheld recently took a dump. The
somewhere? Is it time to trash or should I mail it to factory service?
Perhaps, I should buy another rig. I hate to think that ol' reliable
is finished... Thanks in advance for any assistance! Spare me spam,
like I give a damn.

==========
Phartergram follows...

My BC 200 was stolen a few months ago and I spent the insurance money to buy
the BC 3000. It should sell for about $300.00 or less. The 3000 has 400
channels and a freq range up to 1.3 Gigs or so. I liked many of the new
features but missed the case that came with the BC 200 and also the fact that
my BC 200 had the cell freq's not blocked out. My advise would be to send in
your 200 and get it returned to factory specs. If you wish to purchase a new
scanner, I would recommend the 3000 and get it mail order. Hope this helps..

X-Newsreader: TIN [version 1.2 PL2]

... something about illegal cordless monitoring ...

Let's get this plain and simple ... cordless monitoring - judge(s) have ruled you have no expectation of privacy when using a cordless phone. Case closed!

cellular monitoring - yeah, some say it's against some law. Has it stopped me or anyone I know of? NOPE. In order to enforce the law, a law enforcement person must personally see the offense as well as recognize it as one. So, if I am monitoring cell calls with an earphone in front of city hall or if I am openly listening to them in my home, there is no means to "enforce" said law, and no law prevents me from possessing equipment and using it to do such.

Hence, no privacy with cordless OR cellular phones per example above. Sooo all of you 1 cent phone dealers with your nice fancy contracts and claims of privacy on cellular phones 'cause its against the law, take a hike. It has not stopped me or anyone I know and I listen every night!

*Ironically this is the subject of a topic I will be presenting to a number of people tomorrow evening. I am sure I will be very unpopular when I am done with anyone who *sells* cellular devices. *

You get as much privacy with a cellular or cordless phone, as you would on a CB radio. One difference - CB radios neither cost for airtime nor require contracts of service. You buy the radio, one time expense, with antenna is under $150, and you own it. You do not have to pay so much a month ($29+) nor do you need to pay by the minute like long distance on every local call you make. True, it can't place or receive *phone calls*, but for the purpose of illustration, it has the identical same amount of privacy.

So I hear something cute you said on a cellular phone and I tell you about it. Now .. you'd like to take action as it is "illegal" to do that, right? Just try to take any action, you will find everyone will laugh at you, they will say - where is the evidence? What? You don't have any? Prove this occured! Bang! You're in contempt of court for wasting court resources on a case you have no real evidence in, NEXT CASE!

I think that sums it up quite nicely.

Steven

> and pick all the local freqs w/o having to pour through freq books and
> key code everything in...Thanks

In answer to your question yes.You can set a search range,and have
the scanner record to channels the frequencies it recieves a signal on.

I've hade this radio for about four months now and it is the best
handheld I,ve found.

The ability to program in up to 20 search ranges and also give them a
alphanumaric name makes searching for frequinces easy.

It has 1,000 channels each one can contain a name of up to seven
characters.

Almost all aspects of the scanner can be taliored to suit your needs.

It can be linked to a computer for computer control of same.
and a new bandplan can be uploaded to enable cellular.

As for the reciever part is concerned it is as good as any portable
I have tried,and with all the features it has--I highly RECOMMEND it.

Rick

It is not illegal and if it were it would virtually impossible to
enforce, what IS illegal is to divulge or otherwise make use of what
you hear when listening to these frequencies. The closest that they
get to making 'listening' illegal are the various laws that say you
cannot have a reciever capable of receiving on certain frequencies in
your possession in a vehicle, etc, sort of classifying them as 'burglary'
tools. But then they had to issue exemptions to hams, paramedics/e-squad
guys and so on. Then they got involved with 'prior-restraint' issues.
Its all a mess, but it boils down to 'no its not illegal', but it could
cost you a bundle to keep an ignorant local constabulary at bay if they
have some stupid laws.

> (A happy AR3000 owner)

To quote the EEB flyer I got when it first came out...

"The new AR3000A is very much an update to the AR3000 rather than a totally new concept unit. The main changes are of a mircoprocessor nature with a new microprocessor PCB being incorporated with a lager LCD.

The mirco is now compiled using 'C' rather than 'BASIC', with improved scan/search speeds, more facilities and better stability. The AR3000A is capable of searching up to 50 increments per second with the average scan speed being 30 channels per second (both were only 20 on the AR3000).

As well as a lager LCD, the viewing angle has been changed from six o'clock to twelve o'clock position, which provides a vast improvement weather at a desk or when moundted in a vehicle.

Additional timing functions have been added for delay, pause and priority sampling times. There are now 100 pass frequencies in each search bank instead of 48 available in the AR3000.

Hope this helps!

Brett Kollar
bkollar@maui.netwave.net
(Another happy AR3000 owner)
The rotary tuning control is now free running, providing a nicer feel for SSB/CW operation.

Microprocessor reset and memory clear facilities have been added to the front panel, which prove very useful. The RS232 connection now has a switch on the rear panel to activate/deactivate the remote connection. The RS232 is more user friendly and now provides a sign-on welcome message and '>' ready prompt.

While the list of additional benefits is quite long, the general RF performance remains unchanged.

Many factory installed mods in the AR3000 have been incorporated in the new AR3000A circuit boards. As a result few images have been observed."

After some checking, I found out that QSL cards cost anywhere from $70.00 to $450.00 per 1000 cards to be printed up. I also found out that you are pretty limited to the color of card, artwork and color of ink to choose from. I have been printing cards for my ham

friends for some time now and I have been encouraged by my friends

to branch out and advertise a little.

I can print 1000 cards with black ink for only $50.00. Why should you order your cards from me? Because $50.00 is it! No shipping charges, no setup charges, no hidden costs. PLUS...you have your choice of 13 card colors, unlimited artwork, and you can have up to FIVE different layouts per order. Want color ink? For example, do you want a red, white and blue US flag on your cards? That would only be $65.00 per 1000, with 13 card colors to choose from,

up to FIVE different layouts, and unlimited artwork in black or colors.

Your card color choices are white, blue, yellow, pink, green, ivory, peach, gray, and the following eyepopping flourescents: yellow, pink, green, blue, and red. Artwork is too numerous to list all designs here, but just some examples would be an ARRL logo, ARES logo, SKYWARN logo, flags of all 50 states, maps of all 50 states, antennas and radios, flags and maps of US territories and foreign countries and 1000's more...
Custom artwork available at NO ADDITIONAL CHARGE!!! Just tell me what you want!!!

Reply via private email for a FREE sample snail mailed to you today!

To place an order call Mark at (904) 626-2450 or FAX (904)626-7686 or you can mail check or money order to:

Ditto here. I ordered the 12" Austin Condor for my Bearcat 2500XLT and noticed right away a big difference
in reception. It's worth the approx 26 bucks for one. You just can't be very sneaky with it in those
"low profile" scanning situations.

Who or what do people with scanners listen to ?
I personally listen to everything that I can tune in on 30MHz-1.3GHz.
But in todays world more and more radio users are switching to digital
transmitters and as if that wasnt enough they are encrypting and
freq.hopping. What good will my scanner be in the future? It might do
as a paperweight. Are there any plans out there for digital scanners?
Why are new analogue scanners being developed when the way of the
future is digital?

I would like this artical to be a start to a discussion about the
future of scanning. Should this be a seperat newsgroup?

please excuse my poor english.

Regards.

Rickard.

Your missing the picture here... That privacy act wasn't passed to hunt down monitors.... Everyone in their right mind knows that you can't catch someone listening in on cell-phone calls... Hell you don't even need the scanner to be modified to hear them... Anyhow the only true purpose of this law was to protect Cellular companies and Customers from law suits, and or procecution(sp). Basicly anyone with the means is going to monitor, and nothing can be done about that, but the person on the other end doing an illegal act can not be turned in, anything discussed over a cell and NOW a cordless phone can NOT be used in a justice court of the U.S. Cellular Companies would of gone down the drain if they didn't have some type of policy that protected their customer's LEGAL rights from anything said on the (radio) meaning cell-phone... I bump into so many people all the time with cell phones, they find it hard to believe that I can monitor them, calling me a liar, until I breakout my UNmodified Pro-51, heh heh, and do a band search between 896.0000 ~ 915.0000 and BAMM, I find them in less than a minute, both sides of the conversation and all... THEY THINK that its (private) because of the law, but it only protects them in court.... There is a digital cell system being used now, but it will be awhile before its widly used... I used one, its a two-way and a cell all in one... KEWL stuff too...

None of the cellular allotment from 869-894 Mhz is reserved solely for boats. Almost everybody who owns a boat these days also has a portable cellular phone, or at least that's the way it is around here at the west end of Lake Erie. You'll hear quite a few cellular calls made from boats in the boating season. In this area, and I suppose this holds true for most other areas with large bodies of water with boaters on it, cellular towers have been built very close to the water. Cellular companies don't want to miss out on collecting that air time from boaters too.

Yes, scanner owners can listen to cellular calls. But all the scanner does is sequentially scan through the various frequencies. All the listener gets is a call totally selected at random. Also, most of the time, cells and frequencies change several times during a call. Once the call changes cells, the scanner listener will find it difficult or impossible to ever pick up the rest of the call.

And there is no way the scanner user can target a specific cell phone owner and listen to their conversations at will. He lacks the ability to predict what frequency their phone will choose to operate on. Given there are something like 833 frequencies, most scanners are not even capable of having all the frequencies programmed in. And even so, scanning all of them to search for your "target" would take longer than most phone calls last to do.

And the scanner user is not able, when he does pick up a random call, to find out who it is, or what phone number he's listening to. Unless someone in the conversation clearly identifies himself. Most people are talking to someone on the phone they already know, and don't need to give out lots of details on who they are, etc.

And more often than not, only one side of the conversation is heard.

All that scanner listening to cell calls is, is entertainment. You get to hear 1-minute one-sided samples of conversations of people you haven't the slightest who they are. I guess for some people this really fun.

Yes, the cell phone user has a slight risk of someone invading his privacy, but not much of one, IMO. Yes the phone user might out to be aware that there is a one-in-100,000 chance that someone he doesn't know is bored enough to be sitting next to a little radio having a good time listening to him. Without knowing who he is.

But personally, I think the odds would be just as bad for having a land-line phone wiretapped. It's easy to do and just because it's illegal doesn't mean it isn't done. Perhaps by some phone company worker or someone who runs the office phone system. Aren't employers occasionally known to tap in and listen to their employees' calls?

Don't get mad at the poor Shackies. Until this month I had been one for 5-1/2 years. In a tight job market...
Consider what they're paid: Last year, I was one of the top 20 salesmen in my district, and I made--gross, not net--just under $15k.
True, service varies from store to store. In the store where I was assigned--for 4-1/2 yrs, Cocoa Beach, Fla.--the service was fantastic until just a year ago, when a new, hard-charging manager was brought in. No concern for service, it's now all MONEY-MONEY-MONEY. I had been complacent, working under great managers (2), but when that guy came in I had to get out. Now, the nearby mall, which always had the bad rep, has a good manager, and service has improved!
If you have a problem, don't be shy about calling the District Manager (NOT the Regional Manager); someone in the store will give you the number, and if he doesn't, go to another store--you've got one more thing to complain about.
Feel free to write me with any questions.

I worked for a great manager for about three years; he left because the manager compensation had been slashed so much it wasn't worth his while anymore. At one point he was making $55k/yr; at the end, only half that.
There is training now, of a sort; at least they try to make us aware of what we're selling. And the pay plan has changed, to salary plus commission, though it's still not very much.
The conmpany's attitude is that there's always someone else for your job--if you don't like it, leave. When I did leave, I gave the DM evidence of the manager's stealing so she can can him when she's done with him.
Things are changing, but slowly; the new president, Len Roberts, really is committed to customer service, but his attitude hasn't yet trickled down the the regions and districts. Let's hope it does soon.
Amazing how many underemployed engineers there are in RS in this area. My new job starts tomorrow; thanks to RS training, I'll be doubling my pay. I'll be working at Cape Canaveral Air Station, aka the Rocket Ranch. Yee-haw! Git along little Deltas!

The attached archive contains my comments about the new version of Probe (2.0), software used to control PRO-2005/6 and PRO-2035/42 scanners modified with OS-456 or OS-535 computer interface boards. Screen captures are included.

In short, Probe 2.0 is a very powerful DOS scanner control program, which will also run under Windows. It is not "general purpose", but it is makes the RS/Opto combination extraordinarily powerful.

73,

Larry L. NA5E

From this months MT:

"A Dallas school board member who was taped using a variety of obscenities and racial slurs on his CORDLESS PHONE is now working with the FBI 'to find out who did [the taping] - not for any vindiction fo myself but for all citizens.'"..."The FBI is now involved in the case, investigating the source of the apparent illegal wiretap."

> future is digital?

Then again why are analog transmitters also being developed if digital is the way of the future? Because these things take time. Satellite broacast is going to take over the FM broadcast band, but not for another 10 or 15 years. Don't worry, analog frequencies will still be around for a while. When there is enough demand for digital ones (scanners), they will be out on the market.

6353. April edition, Ham Radio Online is now available

Newsgroup: rec.radio.scanner

The April edition of Ham Radio Online magazine is now available at
http://www.accessone.com/~vbook
or
http://www.accessone.com/~vbook/hronline.htm

This month features original stories on packet radio path quality, spread spectrum
communications, more information on making your own solar observations, getting started in shortwave listening and an amazing list of hidden or not so hidden renditions of Morse code in popular music. We will be adding more stories over the coming weeks - this is a dynamic magazine with upates appearing as often as daily.

As usual, Ham Radio Online also features Amateur radio newsletters from around the world, real-time ionospheric propagation reports, real-time aurora conditions,
real-time MUF calculations, real-time earthquake and severe weather reports and so much more.

Stop and by and enjoy. We are free - and free of ads too - your stories are always
welcome at Ham Radio Online.

Thanks and 73,
Ed and Kim Mitchell,
KF7VY and N7VPL
